Volume 10023

Proceedings of SPIE 0277-786X, V. 10023

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

Optical Metrology and Inspection for Industrial Applications IV, edited by Sen Han, Toru Yoshizawa, Song Zhang,
Proc. of SPIE Vol. 10023, 1002301 · © 2016 SPIE · CCC code: 0277-786X/16/\$18 · doi: 10.1117/12.2265117

Proc. of SPIE Vol. 10023 1002301-1

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIEDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

LIBRARY**

SPIEDigitalLibrary.org

Paper Numbering: *Proceedings of SPIE* follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

vii	<i>Authors</i>
ix	<i>Symposium Committees</i>
xi	<i>Conference Committee</i>
xiii	<i>Introduction</i>

SESSION 1 OPTICAL METROLOGY METHODS I

10023 03	Software system design for the non-null digital Moiré interferometer [10023-3]
10023 04	FPGA-based real-time phase measuring profilometry algorithm design and implementation [10023-4]
10023 05	Elongation measurement using 1-dimensional image correlation method [10023-5]
10023 07	Spindle error motion measurement using concentric circle grating and sinusoidal frequency-modulated semiconductor lasers [10023-7]

SESSION 2 OPTICAL METROLOGY METHODS II

10023 09	Concentricity calibration of photogrammetry retro-reflector target [10023-11]
10023 0B	A field calibration method to eliminate the error caused by relative tilt on roll angle measurement [10023-13]
10023 0C	The study of fast measurement hexahedron verticality error by wavefront interferometer [10023-14]
10023 0D	Performance analysis of three-dimensional surface profilometry using a MEMS mirror [10023-80]
10023 0E	Quadrant-division technique for differential sensitivity optical beam measurement [10023-81]

SESSION 3 OPTICAL METROLOGY METHODS III

10023 0F	Precision requirements and innovative manufacturing for ultrahigh precision laser interferometry of gravitational-wave astronomy (Invited Paper) [10023-15]
----------	--

- 10023 0I **An automatic large-scale 3D coordinate measurement system based on vision guidance** [10023-18]
- 10023 0K **Fast in-situ tool inspection based on inverse fringe projection and compact sensor heads** [10023-20]
- 10023 0L **Numerical simulation research and applications on scattering imaging of surface defects on optical components** [10023-21]

SESSION 4 OPTICAL METROLOGY METHODS IV

- 10023 0N **Spin Hall effect of light applied in optical linear scale** [10023-23]
- 10023 0O **Accurate reconstruction in measurement of micro-structures using digital holographic microscopy** [10023-24]
- 10023 0P **Tip/tilt-compensated through-focus scanning optical microscopy** [10023-25]
- 10023 0Q **The total spectral radiant flux calibration using a spherical spectrometer at National Institute of Metrology China** [10023-26]

SESSION 5 OPTICAL METROLOGY METHODS V

- 10023 0S **Binocular stereo vision system based on phase matching** [10023-28]
- 10023 0T **Algorithms and applications of aberration correction and American standard-based digital evaluation in surface defects evaluating system** [10023-29]
- 10023 0V **Signal processing in white-light scanning interferometry by Fourier transform and its application to surface profile measurements** [10023-31]
- 10023 0W **Calibration of angle-measurement system for direction measurements** [10023-32]

SESSION 6 OPTICAL METROLOGY METHODS VI

- 10023 0X **Full-field 3D shape measurement of specular surfaces by direct phase to depth relationship (Invited Paper)** [10023-33]
- 10023 0Y **Three-dimensional surface inspection for semiconductor components with fringe projection profilometry** [10023-34]
- 10023 0Z **Measurement uncertainty evaluation of the three degree of freedom surface encoder** [10023-35]
- 10023 12 **An accurate approach for calibrating rotational angle of camera** [10023-38]

SESSION 7 OPTICAL METROLOGY APPLICATIONS I	
10023 14	Embedded 3D shape measurement system based on a novel spatio-temporal coding method [10023-40]
10023 15	Imaging ellipsometer with large field-of-view [10023-41]
10023 16	Hybrid probing technique for coordinate measurement with optically trapped micro sphere [10023-42]
10023 17	Research on application of photoelectric rotary encoder in space optical remote sensor [10023-43]
10023 19	An accurate and reliable circular coded target detection algorithm for vision measurement [10023-45]
SESSION 8 OPTICAL METROLOGY APPLICATIONS II	
10023 1A	An underwater ranging system based on photoacoustic effect occurring on target surface [10023-46]
10023 1B	Rail profile control using laser triangulation scanners [10023-47]
10023 1C	Non-uniform sampling knife-edge method for camera modulation transfer function measurement [10023-48]
10023 1D	A precise reference position detection method for linear encoders by using a coherence function algorithm [10023-49]
10023 1E	Development of an edge sensor based on polyview optics and laser triangulation principle [10023-50]
10023 1F	Arbitrary optical frequency synthesis traced to an optical frequency comb [10023-51]
POSTER SESSION	
10023 1J	Dimensional measurement of micro parts with high aspect ratio in HIT-UOI [10023-53]
10023 1K	Simulation of out-of-plane displacement measurement using vortex beam: on the base of liquid crystal spatial light modulator [10023-54]
10023 1M	Experimental investigation of correlation between surface amplitude parameters of frosted glass diffuser and size of polishing grit [10023-56]
10023 1N	A colorful codification method for structured light measurement based on the hue of single image [10023-57]
10023 1O	Corner detection and sorting method based on improved Harris algorithm in camera calibration [10023-58]

10023 1Q	3D measurement and camera attitude estimation method based on trifocal tensor [10023-60]
10023 1S	Virtual-stereo fringe reflection technique for specular free-form surface testing [10023-62]
10023 1U	A simple phase-shift ESPI for 3D deformation measurement [10023-64]
10023 1V	Evaluation of 3D displacement components by combining DSCM with ESPI [10023-65]
10023 1X	Numerical calibration of laser line scanning system with multiple sensors for inspecting cross-section profiles [10023-67]
10023 1Y	Uncertainty evaluation of ellipsometer: from instrumentation to material and application in Avogadro's project [10023-68]
10023 1Z	Dynamic 3D shape measurement based on digital speckle projection and temporal sequence correlation [10023-69]
10023 20	A flexible new method for 3D measurement based on multi-view image sequences [10023-70]
10023 21	A robust real-time laser measurement method based on noncoding parallel multi-line [10023-71]
10023 22	Experiments and error analysis of laser ranging based on frequency-sweep polarization modulation [10023-72]
10023 23	High-speed image acquisition technology in quality detection of workpiece surface [10023-73]
10023 25	The research of weld defect detection based on high precision displacement sensor [10023-75]
10023 26	Research of non-contact measurement method for outline dimensions of some special workpiece [10023-76]
10023 27	GPU-accelerated phase extraction algorithm for interferograms: a real-time application [10023-77]
10023 28	Study of angle measuring error mechanism caused by rotor run-outs [10023-78]
10023 29	Truncated pyramid artifact for performance evaluation experiments on laser line scanner [10023-79]

Authors

Numbers in the index correspond to the last two digits of the seven-digit citation identifier (CID) article numbering system used in Proceedings of SPIE. The first five digits reflect the volume number. Base 36 numbering is employed for the last two digits and indicates the order of articles within the volume. Numbers start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B...0Z, followed by 10-1Z, 20-2Z, etc.

Introduction

These are the proceedings of the conference on Optical Metrology and Inspection for Industrial Applications IV that was held as part of SPIE/COS Photonics Asia (in Beijing, China, 12–14 October 2016). This conference focuses on methods, analysis, and applications of optical metrology and inspection that have been applied to various industries with a particular emphasis on the manufacturing industry. The field of optical metrology and inspection has rapidly grown to wide acceptance for many industrial applications. For example, the requirements from the absolute measurement of ultra-smooth flatness, industry realized high-speed and downsized measurement systems, and advances in machine/robot vision have provided smart algorithm systems, new lighting systems, and better ways of data transfer.

Non-contact methods based on optical interference and imaging principles have been seen wide use in the optical/mechanical engineering, semiconductor/LED and electronics industry, and also made advances in traditional manufacturing areas such as automotive and aerospace manufacturing. These methods are also being used for surface shape and defect inspection, and precision measurements. Recent computing power has made analysis methods such as phase-shifting a viable tool for fast on-line inspection for process control and metrology applications. This conference is intended to address the latest advances and future developments in the areas of optical metrology methods, applications and inspections as they are applied in various industries.

In these proceedings, papers submitted to the conference are presented in the following eight sessions: Optical Metrology Methods I to VI and Optical Metrology Applications I and II, and one Poster Session.

In addition to optical interference principles and techniques, imaging methods and phase-shifting analysis techniques have also become more and more popular in practical applications due to rapid advanced computational processing methods, camera systems and device technologies including various optoelectrical elements and devices. In the next conference scheduled in 2018, more papers are expected to be presented in those areas as well.
