Paper Numbering: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print. Papers are published as they are submitted and meet publication criteria. A unique citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a seven-digit CID article numbering system in which:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID Number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages.

Introduction

The papers contained in this volume were presented at the twenty-seventh conference on Ophthalmic Technologies, held from January 28 to 29, 2017, at the Moscone Center in San Francisco, California as a part of the SPIE Photonics West BIOS Meeting.

A total of 56 papers and 16 posters were presented by scientists, clinicians, and engineers from academia and industry representing 20 countries spanning 4 continents. Topics included new approaches using vortex beams for laser corneal surgery, characterization of corneal and lens biomechanics using optical coherence elastography, high resolution cellular-level imaging of the cornea and retina using optical coherence tomography and adaptive optics, and retinal and choroidal vasculature imaging.

The conference hosted its eleventh presentation on the topic of the unmet needs and impact of technology in a clinical area. Prof. William Culbertson, from Bascom Palmer Eye Institute at the University of Miami, gave a captivating lecture describing the development and future needs of femtosecond laser cataract surgery.

The seventeenth Pascal Rol Award was presented to Dr. Furu Zhang and his colleagues from Indiana University for their outstanding paper on "*Tracking dynamics of photoreceptor disc shedding with adaptive optics-optical coherence tomography*" (10045-40). Established in memory of Dr. Pascal O. Rol, former chair and co-founder of the Ophthalmic Technologies conference, the award is in recognition of the best manuscript and presentation. The 2017 finalists of the award, selected by the entire program committee among the 74 abstract submissions, included Iwona M. Gorczynska (10045-33), Francesco LaRocca (10045-45), and Zhuolin Liu (10045-38).

We are very grateful to the Brien Holden Vision Institute in Sydney, Australia, for sponsoring the 2017 Pascal Rol award and keynote lecture through the Pascal Rol Foundation.

We thank the Program Committee members, session chairs, speakers and participants, as well as the SPIE staff for their support and dedication in making this conference a success.

We extend an invitation for the Ophthalmic Technologies XXVIII conference, which is scheduled for Saturday January 27 and Sunday January 28, 2018 in San Francisco, CA.

The 2017 Pascal Rol Lecture on Ophthalmic Technologies
Saturday January 28, 2017

Professor William Culbertson
Bascom Palmer Eye Institute
University of Miami, Miami, FL

***Clinical implementation of fs cataract surgery,
needs for further technology?***

The Pascal Rol Lecture on Ophthalmic Technologies" is presented by a leading researcher in ophthalmology with a strong interest and pioneering research contributions to the field of ophthalmic technologies. This invited lecture is intended to trigger further development of ophthalmic technologies by stimulating discussions between basic scientists, engineers, and clinicians.

*The 2017 lecture was supported by the Brien Holden Vision Institute
through the Pascal Rol Foundation (www.pascalrolfoundation.org)*
