Volume 10251

Proceedings of SPIE 0277-786X, V. 10251

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

Biomedical Imaging and Sensing Conference, edited by T. Yatagai, Y. Aizu, O. Matoba, and Y. Awatsuji.
Proc. of SPIE Vol. 10251, 1025101 · © 2017 SPIE · CCC code: 0277-786X/17/\$18 · doi: 10.1117/12.2280106

Proc. of SPIE Vol. 10251 1025101-1

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIEDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Other copying for republication, resale, advertising or promotion, or any form of systematic or multiple reproduction of any material in this book is prohibited except with permission in writing from the publisher. The CCC fee code is 0277-786X/17/\$18.00.

Printed in the United States of America.

Publication of record for individual papers is online in the SPIE Digital Library.

SPIE. DIGITAL LIBRARY
SPIEDigitalLibrary.org

Paper Numbering: *Proceedings of SPIE* follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

ix	<i>Authors</i>
xiii	<i>Conference Committee</i>
xv	<i>Introduction</i>

SESSION 1 OMC AND BISC JOINT SYMPOSIUM I

10251 02	Bioluminescent indicator applicable to membrane voltage recording in various excitable cell types (Plenary Paper) [10251-1]
10251 03	Cellular biophysical markers of hydroxyurea treatment in sickle cell disease (Invited Paper) [10251-2]

SESSION 2 OMC AND BISC JOINT SYMPOSIUM II

10251 04	Wavefront correction enables vibrational imaging of bacteria with multimode fibre probes [10251-3]
10251 05	Two-photon excitation microscopy with spatial light modulator [10251-4]

SESSION 3 BRAIN IMAGING AND RAMAN MICROSCOPY

10251 06	Brain connectomics imaging in schizophrenia study (Invited Paper) [10251-5]
10251 07	Improvement of spatial and spectral resolution in Raman microscopy (Invited Paper) [10251-6]
10251 08	Label-free characterization of degenerative changes in articular cartilage by Raman spectroscopy [10251-7]

SESSION 4 IMAGING IN TURBID MEDIA

10251 09	Investigation of light scattering characteristics of individual leukocytes using three-dimensional refractive index maps (Invited Paper) [10251-8]
10251 0A	Imaging through scattering media with single-pixel detection (Invited Paper) [10251-9]
10251 0B	Fundamental study for scattering suppression in biological tissue using digital phase-conjugate light with intensity modulation [10251-10]

SESSION 5	DIGITAL HOLOGRAPHY AND MICROSCOPY
10251 0C	Holographic techniques for cellular fluorescence microscopy (Invited Paper) [10251-11]
10251 0D	Three-dimensional imaging of micro-specimen by optical scanning holography [10251-12]
10251 0E	Microscopic video observation of capillary vessel systems using diffuse back lighting [10251-13]
10251 0F	Incoherent digital holography system utilizing single-shot phase-shifting interferometry [10251-36]
10251 0G	Absorption contrast imaging beyond the diffraction limit with electron-beam excitation assisted optical microscope [10251-15]
SESSION 6	BEYOND THE DISTURBANCE: HIGH-RESOLUTION IMAGING THROUGH TURBID LIVING CELLS AND TISSUES
10251 0H	Adaptive optical microscope for brain imaging <i>in vivo</i> (Invited Paper) [10251-16]
10251 0I	Current limitations in super-resolution fluorescence microscopy for biological specimens: How deep can we go from the cover glass? (Invited Paper) [10251-17]
10251 0J	Computational holographic imaging through random diffraction (Invited Paper) [10251-18]
10251 0K	Adaptive optical imaging through complex living plant cells (Invited Paper) [10251-19]
10251 0L	Ultra-fast 3D scanning and holographic illumination in non-linear microscopy using acousto-optic deflectors (Invited Paper) [10251-20]
SESSION 7	INTERDISCIPLINARY BIOMEDICAL IMAGING
10251 0M	High-speed bioimaging with frequency-division-multiplexed fluorescence confocal microscopy (Invited Paper) [10251-21]
10251 0N	Observation of elastic wave propagation near tissue surface using swept-source optical coherence tomography (Invited Paper) [10251-22]
10251 0O	Non-label bioimaging utilizing scattering lights (Invited Paper) [10251-23]
10251 0P	Cell tracking for cell image analysis (Invited Paper) [10251-24]
10251 0Q	Requirement of spatiotemporal resolution for imaging intracellular temperature distribution (Invited Paper) [10251-25]

SESSION 8 OPTICAL COHERENCE TOMOGRAPHY	
10251 OR	Multi-contrast imaging of human posterior eye by Jones matrix optical coherence tomography (Invited Paper) [10251-26]
10251 OS	Ultra-high resolution polarization-sensitive optical coherence tomography for imaging of the retinal nerve fiber layer [10251-27]
10251 OT	Study on laser-assisted drug delivery with optical coherence tomography [10251-28]
10251 OU	A 3.4-mm beam diameter system for retinal imaging with OCT and adaptive optics [10251-29]
SESSION 9 COMPUTATIONAL IMAGING	
10251 OV	Advancements in remote physiological measurement and applications in human-computer interaction (Invited Paper) [10251-30]
10251 OW	Three-dimensional movement analysis for near infrared system using stereo vision and optical flow techniques [10251-31]
10251 OX	<i>In vivo</i> imaging of spontaneous low-frequency oscillations in cerebral hemodynamics with a digital red-green-blue camera [10251-32]
10251 OY	Simultaneous three-dimensional imaging of multi-focal microscopy [10251-33]
10251 OZ	Bayesian based fluorescence coded imaging using quantum dots [10251-34]
POSTER SESSION	
10251 11	Three-wavelength phase-shifting interferometry selectively extracting wavelength information from wavelength-multiplexed images with arbitrary symmetric phase shifts [10251-35]
10251 12	Analysis of common-path incoherent digital holography using dual-focusing lens with diffraction gratings [10251-37]
10251 13	Real-time three-dimensional counting and shape measurement of RBCs using digital holographic cytometry [10251-38]
10251 14	Enhancing spatial resolution of digital holographic microscopy using speckle patterns generated from ring-slit apertures [10251-39]
10251 15	Bio-imaging using planar lightwave circuit digital holographic microscope [10251-40]
10251 16	Comparison of different wavefront measurement setups to judge the position tolerance of intraocular lenses in a model eye [10251-41]

- 10251 17 **Holographic 3D multi-spot two-photon excitation for fast optical stimulation in brain**
[10251-42]
- 10251 18 **Non-contact local temperature measurement inside an object using an infrared point
detector** [10251-43]
- 10251 19 **Photoacoustic imaging of hidden dental caries by using a fiber-based probing system**
[10251-44]
- 10251 1A **Analysis of disulphide bonds found in human hair by Raman spectroscopy** [10251-45]
- 10251 1B **Analysis of human hair by Raman microspectroscopy** [10251-46]
- 10251 1D **Evaluation of bone quality in osteoporosis model mice by Raman spectroscopy** [10251-48]
- 10251 1E **Noninvasive imaging of oral mucosae with optical coherence tomography** [10251-49]
- 10251 1F **Contrast-enhanced optical coherence microangiography with acoustic-actuated
microbubbles** [10251-50]
- 1025 1G **Dual illumination for cornea and retina imaging using spectral domain optical coherence
tomography** [10251-51]
- 10251 1H **Application of wearable optical coherence tomography (OCT) and loop-mediated
isothermal amplification (LAMP) techniques for *in situ* real-time field inspection of apple
Marssonina blotch disease** [10251-52]
- 10251 1I **Comparative study on visible-OCT imagings using a LED and a super-continuum laser with
a wavelength-tunable filter** [10251-53]
- 10251 1J **Basic experiments of laser beam correction by adaptive optics microscope for the
accurate manipulation of biological tissues** [10251-54]
- 10251 1K **Determination of three-dimensional molecular orientation of type-I collagen by circularly-
polarized second harmonic generation imaging** [10251-55]
- 10251 1L **Study of targeted-treatment on colon cancer cell via spectroscopic imaging ellipsometry**
[10251-56]
- 10251 1M **Differential Mueller matrix polarimetry for low concentration of glucose sensing** [10251-57]
- 10251 1N **Development of skin tissue phantom having a shape of sulcus cutis and crista cutis**
[10251-58]
- 10251 1O **Quantitative evaluation on the depth and spread of light propagation in skin tissue using
Monte Carlo simulation** [10251-59]
- 10251 1P **Monte Carlo simulation of skin image using a skin model with surface texture** [10251-60]
- 10251 1Q **Color reproduction of human skin by spectral reflectance using RGB images and the
Wiener estimation method** [10251-61]

- 10251 1R **Dual type fiber-optic radiation sensor for measuring alpha and beta particles** [10251-62]
- 10251 1S **Light propagation analysis for fluorescence measurements of a molecular probe in the brain** [10251-63]
- 10251 1T **Enhanced non-enzymatic glucose biosensor of Ga-doped ZnO nanorods** [10251-64]
- 10251 1U **Noninvasive measurement of blood glucose level using mid-infrared quantum cascade lasers** [10251-65]
- 10251 1V **Enhanced glucose biosensor properties of gold nanoparticle-decorated ZnO nanorods** [10251-66]
- 1025 1W **Multi-capillary based optical sensors for highly sensitive protein detection** [10251-67]
- 10251 1X **Study of noncontact air-puff applanation tonometry IOP measurement on irregularly-shaped corneas** [10251-68]
- 10251 1Y **Further improvement of an intraocular lens holder for more physiological measurements within a mechanical eye model** [10251-69]
- 10251 1Z **Estimation of functional areas probed by near-infrared spectroscopy instruments** [10251-70]
- 10251 20 **pH-responsive hydrogel coated fiber Bragg grating-based chemo mechanical sensor bioreactor applications** [10251-71]
- 10251 21 **Investigation of temporal effects on microcirculation induced by focused ultrasound** [10251-72]
- 10251 23 **Numerical consideration on trapping and guiding of nanoparticles in a flow using scattering field of laser light** [10251-74]

Authors

Numbers in the index correspond to the last two digits of the seven-digit citation identifier (CID) article numbering system used in Proceedings of SPIE. The first five digits reflect the volume number. Base 36 numbering is employed for the last two digits and indicates the order of articles within the volume. Numbers start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B...0Z, followed by 10-1Z, 20-2Z, etc.

Izumi Nishidate, Tokyo University of Agriculture and Technology (Japan)

Introduction

On behalf of the organizing committee and program committee, it was our great pleasure to welcome you to the third Biomedical Imaging and Sensing Conference in the SPIE Technologies and Applications of Structured Light (TASL) symposia and within the framework of the OPTICS & PHOTONICS International Congress (OPIC 2017).

The mission of this conference was to present and discuss recent progress in biomedical optics and photonics, which is one of the most promising and attractive areas.

In this field of optics and photonics, advanced optical tools and ideas are employed for the understanding of biological and medical phenomena and the diagnosis and treatment of diseases, from the cellular to macroscopic levels. On the cellular level, for example, highly precise laser application allows for the manipulation, operation or stimulation of cells; even in living organisms or animals. Optical microscopy has been revolutionized by a thorough understanding of different markers in cells and their switching behavior. Marker-free microscopy, like CARS, SHG, THG or Raman microscopy, is spreading into biological, medical, and clinical applications. OCT is continuously broadening its clinical applicability through even higher resolution, higher speeds, more compactness, and through the use of Doppler and polarization sensitivity for functional imaging. Digital holography is also applied to biomedical imaging to observe functional responses in cells and internal organs.

The techniques developed in biomedical optics and photonics could bring us great steps in advances of physical, engineering, and biological knowledge; as well as for optics and photonics. This conference was planned to cover several aspects, from the fundamental studies at cellular level biology to clinical applications using various optical technologies.

Finally, we welcome you once again to Biomedical Imaging and Sensing Conference and we hope you enjoyed the fruitful discussions within the conference.
