Event: Euro-American Workshop on Optoelectronic Information Processing, 1999, Colmar, France

Contents

vii *Preface*

- 1 **Remote imaging by transfer of coherence functions through optical fibers**
W. T. Rhodes, Georgia Tech Lorraine (France); G. Welch, Georgia Institute of Technology (USA)
- 11 **Chromatic compensation of light diffraction: achromatic diffraction-based applications**
P. Andrés, Univ. de València (Spain); V. Climent, Univ. Jaume I (Spain)
- 41 **Nonlinear space-time information processing**
Y. Fainman, D. M. Marom, K. Oba, D. Panasenکو, Y. T. Mazurenko, P. C. Sun, Univ. of California/San Diego (USA)
- 61 **Angle division multiplexing in multimode fibers for optical board-to-board interconnection**
K.-H. Brenner, R. Klug, U. W. Krackhardt, Univ. Mannheim (Germany)
- 71 **Characterization of VGA liquid crystal panels with partial phase-only modulation: application to pattern recognition**
S. Vallmitjana, I. Labastida, E. Martín-Badosa, A. Carnicer, I. P. Juvells, Univ. de Barcelona (Spain)
- 91 **Applications of a liquid crystal television used as an arbitrary quasi-phase modulator**
V. Laude, C. Dirson, D. Delautre, S. Breugnot, J.-P. Huignard, Thomson-CSF (France)
- 119 **Optoelectronic processing based on binary decompositions of images**
C. Ferreira, J. García, P. García-Martínez, J. J. Esteve-Taboada, Univ. de València (Spain)
- 151 **Dynamic computer-generated hologram displayed on a spatial light modulator for information processing**
P. Ambs, L. Bigué, C. Stolz, Univ. de Haute Alsace (France)
- 171 **Multisensor image registration and optical correlation**
Y. Sheng, X. Yang, D. McReynolds, COPL/Univ. Laval (Canada); P. Valin, Lockheed Martin Canada; L. Seigny, Defence Research Establishment Valcartier (Canada)
- 193 **Statistically independent region models applied to correlation and segmentation techniques**
P. Réfrégier, F. Goudail, C. Chesnaud, Ecole Nationale Supérieure de Physique de Marseille (France)
- 227 **Philosophy for optical filter optimization**
R. D. Juday, NASA Johnson Space Ctr. (USA)

- 241 **Extensions of l_p -norm optimum filters for image recognition**
N. Towghi, B. Javidi, Univ. of Connecticut (USA)
- 265 **Optically reconfigurable processors**
J. Mumbru, California Institute of Technology (USA); G. Zhou, California Institute of Technology (USA) and Holoplex Inc. (USA); S. Ay, Photobit Corp. (USA); X. An, Holoplex Inc. (USA); G. Panotopoulos, California Institute of Technology (USA); F. H. Mok, Holoplex Inc. (USA); D. Psaltis, California Institute of Technology (USA)
- 289 **Optical neural networks using liquid crystal devices**
N. Collings, Univ. of Neuchâtel (Switzerland)

Preface

Optoelectronic information processing concerns a wide range of optoelectronic systems, scientific topics, technologies, and algorithms. It is aimed to provide solutions with high performance for difficult tasks such as very high data transmission rate systems, very high density data storage, pattern recognition, security, and many other applications.

The applications of optoelectronic systems for optical fiber transmission and optical data storage are recent and practical examples of the efficient commercial success of optoelectronics. On the other hand, the critical components for the interface between optics and electronics constitute a real challenge for these new applications.

The goal of the workshop and of this book is to present and discuss recent progress in both fundamental and practical areas in this domain. It also allows one to analyze the relevant directions of research and near- to medium-term developments.

We would like to thank the authors for their dedicated work and the SPIE staff for their help in preparing this volume.

Philippe Réfrégier
Bahram Javidi
