Proceedings of SPIE 0277-786X, V. 10391

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

Developments in X-Ray Tomography XI, edited by Bert Müller, Ge Wang, Proc. of SPIE Vol. 10391,
1039101 · © 2017 SPIE · CCC code: 0277-786X/17/\$18 · doi: 10.1117/12.2293175

Proc. of SPIE Vol. 10391 1039101-1

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIEDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Paper Numbering: *Proceedings of SPIE* follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

vii	<i>Authors</i>
ix	<i>Conference Committee</i>
xi	<i>Introduction</i>

SESSION 1 INSTRUMENTATION I: TRENDS IN CT

10391 02	Recent trends in high-resolution x-ray tomography [10391-1]
10391 03	A comparison study: image-based vs signal-based retrospective gating on microCT [10391-2]
10391 04	Improving material identification by combining x-ray and neutron tomography [10391-3]
10391 05	Nanoscale holographic tomography of heart tissue with x-ray waveguide optics [10391-4]
10391 06	High energy near- and far-field ptychographic tomography at the ESRF (Invited Paper) [10391-5]

SESSION 2 INSTRUMENTATION II: ALTERNATIVES TO ATTENUATION-BASED TOMOGRAPHY

10391 08	High-resolution grating interferometer for phase-contrast imaging at PETRA III [10391-7]
10391 09	Quantitative phase contrast and x-ray scattering micro-tomography with the 9.2 keV liquid metal jet anode: applications on materials and life science [10391-8]
10391 0A	Tomography with energy dispersive diffraction [10391-9]

SESSION 3 APPLICATIONS I: ADVANCED NON-DESTRUCTIVE CHARACTERIZATION

10391 0B	Microanatomy of the cochlear hook (Invited Paper) [10391-10]
10391 0E	<i>In-situ</i> observation of polymer blend phase separation by x-ray Talbot-Lau interferometer [10391-13]

SESSION 4 ALGORITHMS I: COMPUTATIONAL TOOLS

10391 0F	Numerical study on simultaneous emission and transmission tomography in the MRI framework [10391-14]
----------	---

- 10391 OG **A spectral CT denoising algorithm based on weighted block matching 3D filtering** [10391-15]
- 10391 OH **Applications of compressed sensing image reconstruction to sparse view phase tomography** [10391-16]
- 10391 OI **Deep learning for low-dose CT (Invited Paper)** [10391-17]
- 10391 OJ **Machine learning for micro-tomography (Invited Paper)** [10391-18]

SESSION 5 APPLICATIONS II: STRUCTURAL ANALYSIS

- 10391 OK **Imaging cellular and subcellular structure of human brain tissue using micro computed tomography (Invited Paper)** [10391-19]
- 10391 OL **Assessment of imaging quality in magnified phase CT of human bone tissue at the nanoscale** [10391-20]
- 10391 OM **Micro-CT *in situ* study of carbonate rock microstructural evolution for geologic CO₂ storage** [10391-21]
- 10391 ON **Establishment of metrological traceability in porosity measurements by x-ray computed tomography** [10391-22]
- 10391 OO **Biodegradable magnesium-based implants in bone studied by synchrotron radiation microtomography (Invited Paper)** [10391-23]

SESSION 6 INSTRUMENTATION III: SYNCHROTRON RADIATION-BASED TOMOGRAPHY

- 10391 OP **The NOVA project: maximizing beam time efficiency through synergistic analyses of SRμCT data (Invited Paper)** [10391-24]
- 10391 OQ **Detector response artefacts in spectral reconstruction** [10391-25]
- 10391 OS **Comparison of data processing techniques for single-grating x-ray Talbot interferometer data** [10391-27]
- 10391 OT **Micro- and nano-tomography at the DIAMOND beamline I13L imaging and coherence** [10391-28]

SESSION 7 ALGORITHMS II: FAST RECONSTRUCTION

- 10391 OU **Design of 4D x-ray tomography experiments for reconstruction using regularized iterative algorithms (Invited Paper)** [10391-29]
- 10391 OV **Reduction of metal artifacts in x-ray CT images using a convolutional neural network** [10391-30]

10391 OW **Deep learning methods for CT image-domain metal artifact reduction** [10391-31]

SESSION 8 INSTRUMENTATION IV: DATA ACQUISITION

10391 OY **Recent advance in grating-based x-ray phase tomography (Invited Paper)** [10391-33]

10391 OZ **Thomson scattering x-ray source: a novel tool for monochromatic computed tomography (Invited Paper)** [10391-34]

10391 IO **Development of full-field x-ray phase-tomographic microscope based on laboratory x-ray source** [10391-35]

SESSION 9 ALGORITHMS III: IMAGE QUALITY

10391 IJ **Sparse reconstruction methods in x-ray CT (Invited Paper)** [10391-37]

10391 IK **Multispectral x-ray CT: multivariate statistical analysis for efficient reconstruction** [10391-38]

10391 IL **Removing ring artefacts from synchrotron radiation-based hard x-ray tomography data** [10391-39]

10391 IM **Comparison of different phase retrieval algorithms** [10391-40]

10391 IN **Nonlinear problems in fast tomography (Invited Paper)** [10391-41]

SESSION 10 APPLICATIONS III: NON-DESTRUCTIVE EVALUATION OF FASCINATING OBJECTS

10391 IP **Grating-based tomography applications in biomedical engineering (Invited Paper)** [10391-42]

10391 IQ **Using SR μ CT to define water transport capacity in *Picea abies*** [10391-53]

10391 IR **High-contrast x-ray microtomography in dental research** [10391-44]

POSTER SESSION

10391 IC **Imaging of the human tooth cementum ultrastructure of archeological teeth, using hard x-ray microtomography to determine age-at-death and stress periods** [10391-43]

10391 ID **Development of high energy micro-tomography system at SPring-8** [10391-47]

10391 IE **A Kullback-Leibler approach for 3D reconstruction of spectral CT data corrupted by Poisson noise (Outstanding Poster Award)** [10391-48]

10391 IG **Characterization of a spectroscopic detector for application in x-ray computed tomography** [10391-50]

- 10391 1H **Integrated control system environment for high-throughput tomography** [10391-51]
- 10391 1I **Innervation of the cow's inner ear derived from micro-computed tomography** [10391-52]

Authors

Numbers in the index correspond to the last two digits of the seven-digit citation identifier (CID) article numbering system used in Proceedings of SPIE. The first five digits reflect the volume number. Base 36 numbering is employed for the last two digits and indicates the order of articles within the volume. Numbers start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B...0Z, followed by 10-1Z, 20-2Z, etc.

- 9 Algorithms III: Image Quality
Christoph Rau, Diamond Light Source Ltd. (United Kingdom)
- 10 Applications III: Non-Destructive Evaluation of Fascinating Objects
Bert Müller, University Basel (Switzerland)

Introduction

This volume results from the eleventh *SPIE Conference on Developments in X-ray Tomography*, a platform for research teams active in the field of x-ray tomography to exchange ideas and discuss topics on instrumentation, algorithms, and a wide variety of applications that need tomographic characterization. Several thousand x-ray tomography systems are currently operated in clinics, industry, and academia. While fast tomography systems with a spatial resolution down to 10 nm belong to the portfolio of the synchrotron radiation facilities, advanced laboratory systems are becoming closer and closer to delivering the performance of nano-tomography. Alternatives to the conventional attenuation-based imaging are emerging and increasingly more popular in solving real problems. A huge amount of x-ray data requires not only the associated hardware but also state-of-the-art software for reconstruction, artifact compensation, and image analysis. Several technical advancements are pushing the performance envelope of tomography in pathology, wood science, anthropology, etc. It is particularly interesting to generate impressive imagery of unique objects and derive critical features of the three-dimensional structures. In addition, the multi-modal imaging is also important, which very recently incorporates the reciprocal space information or physical/chemical synergy. Finally, machine learning has attracted a significant interest in our community, for not only image analysis but also tomographic reconstruction.

The *Developments in X-ray Tomography* conference series traditionally welcomes PhD-students working in the field. In order to promote their career development, the best poster presented by a PhD-student as the first author is awarded and sponsored with a cash contribution by Sigray, Inc. (<http://www.sigray.com>), United States. The winner of the outstanding poster award (see Figure 1) is Mr. Tom Hohweiller, CREATIS, France, for the paper entitled "A Kullback-Leibler approach for 3D reconstruction of spectral CT data corrupted by Poisson noise". Tom, Congratulations!

Figure 1. Tom Hohweiller from France (center), the winner of the outstanding poster award, received the certificate (left image) from the Chairs of the conference, Ge Wang (left) and Bert Müller (right), who both are *Fellows of SPIE*.

This conference again encouraged interdisciplinary discussions on x-ray tomography, which included scientists and experts from computer sciences, engineering and applied mathematics, medicine/dentistry, biology, earth and materials science, crystallography and solid state physics, chemistry. Researchers from the globe presented diversified cutting-edge results. We are proud of the quality and quantity of the accepted papers, and their oral or poster presentation. The Chairs of the conference acknowledge the tremendous efforts by the Program Committee, especially those who participated the scientific meeting, see Figure 2.

Figure 2. Committee members at SPIE (from left to right): Stuart R. Stock, Atsushi Momose, Ge Wang, Felix Beckmann, Bert Müller, and Graham Davis.

The traditional dinner was used once more to discuss the feedback of the participants and to plan the next meeting, which will take place in San Diego, August 11-15, 2019. Again, PhD students active in the field will be highly welcome. Three companies indicated to generously sponsor awards for the best papers of PhD students.

Bert Müller
Ge Wang
