Volume 10436

Proceedings of SPIE 0277-786X, V. 10436

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

High-Power Lasers: Technology and Systems, Platforms, and Effects, edited by Harro Ackermann,
Willy L. Bohn, David H. Titterton, Proc. of SPIE Vol. 10436, 104360R · © 2017 SPIE
CCC code: 0277-786X/17/\$18 · doi: 10.1117/12.2303738

Proc. of SPIE Vol. 10436 104360R-1

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Paper Numbering: *Proceedings of SPIE* follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

LASER ARCHITECTURES FOR POWER SCALING AND PLATFORMS

10436 02	Analysis of optical scheme for medium-range directed energy laser weapon system (Invited Paper) [10436-1]
10436 05	Tunable line width all solid state double spectral line sodium beacon laser [10436-5]

DIODE PUMPED ALKALI LASERS

10436 0B	New results for temperature rise in gain medium of operating DPAL causing its degradation (Invited Paper) [10436-12]
10436 0C	Experimental studies and modeling of static Cs DPALs: dependence of the power and beam shape on different parameters (Invited Paper) [10436-13]
10436 0D	Scaling up and controlling beam quality of flowing-gas diode pumped potassium laser with different pumping geometries: 3D CFD modeling (Best Student Paper) [10436-14]
10436 0E	Modeling of multi-transversal mode lasing in static alkali vapor lasers [10436-15]
10436 0F	Three-dimensional simulation of beam propagation and heat transfer in static gas Cs DPALs using wave optics and fluid dynamics models [10436-16]

LASER INTERACTION, EFFECTS AND COMPONENTS

10436 0G	Standoff spectroscopic interrogation of samples irradiated by high energy lasers [10436-17]
10436 0H	Investigations of high power laser beam interaction with composite materials by means of digital image correlation and thermography [10436-19]
10436 0I	High-efficiency mid-infrared optical parametric amplifier with approximate uniform rectangular pump distribution [10436-4]

POSTER SESSION

- 10436 0M **High-peak power, athermal Nd:YAG transmitter** [10436-26]
- 10436 0N **Experimental investigation of the photodarkening induced core laser leakage in a 3kW co-pumping fiber amplifier** [10436-10]
- 10436 0O **Optimization for the fiber laser source through its temporal and spectral characteristics** [10436-11]

Authors

Numbers in the index correspond to the last two digits of the seven-digit citation identifier (CID) article numbering system used in Proceedings of SPIE. The first five digits reflect the volume number. Base 36 numbering is employed for the last two digits and indicates the order of articles within the volume. Numbers start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B...0Z, followed by 10-1Z, 20-2Z, etc.

Conference Committee

Symposium Chair

Ric Schleijpen, TNO Defence, Security and Safety
(Netherlands)

Symposium Co-Chairs

Karin Stein, Fraunhofer Institute of Optronics, System Technologies
and Image Exploitation IOSB (Germany)
Jan K. Jabczyński, Military University of Technology (Poland)

Conference Chairs

Harro Ackermann, High Energy Laser Joint Technology Office
(United States)
Willy L. Bohn, BohnLaser Consult (Germany)
David H. Titterton, UK Defence Academy (United Kingdom)

Conference Programme Committee

Pierre Bourdon, ONERA (France)
Martin C. Richardson, CREOL, The College of Optics and Photonics,
University of Central Florida (United States)
Jasbinder S. Sanghera, U.S. Naval Research Laboratory
(United States)

Session Chairs

- 1 Laser Architectures for Power Scaling and Platforms
Willy L. Bohn, BohnLaser Consult (Germany)
- 2 Fiber Lasers and Beam Shaping
David H. Titterton, Defence Science and Technology Laboratory
(United Kingdom)
- 3 Diode Pumped Alkali Lasers
Jasbinder S. Sanghera, U.S. Naval Research Laboratory
(United States)
- 4 Laser Interaction, Effects and Components
Willy L. Bohn, BohnLaser Consult (Germany)

Introduction

This was the sixth high-power laser conference, which had an excellent attendance throughout the four sessions despite some last-minute cancellations. However a fairly full programme was maintained through Prof Bohn delivering one key-note address on behalf of the 'JTO' presenter, who was unable to travel. In general, the quality of the papers was high, with some excellent innovative ideas presented. In addition, some intensive discussions and exchange of ideas took place among the experts in all sessions of the conference. It provided an excellent forum for attendees, specialists and newcomers, especially in the areas of laser-device demonstration and evaluation of laser-based systems, along with analysis of laser-induced effects.

In the first session a key-note presentation was given by Dr Jabczynski from the Wojskowa Academy (Poland) concerning the analysis of a medium-range directed-energy laser system. The contributing papers from this session described a multi-terrawatt OPCPA system and a tuneable linewidth all solid-state guide-star (sodium line) device.

The second session (Fiber Lasers and Beam Scaling) was a valuable session with all the scheduled papers delivered. The two invited papers described recent progress with scaling of fibre lasers and a route to 'eye-safer' silica fibre systems through exploitation of nano-particles enabling high-power emission from erbium transitions. The two contributing papers described progress with the development of mid-infrared fibre lasers for remote sensing through super-continuum generation and the demonstration of an all-glass micro-structured fibre cladding light-stripper. The latter device had been developed for use with kilowatt-class laser systems.

The third session covered advanced gas-laser developments, and in particular, advances with diode-pumped alkali lasers (DPALs). Dr Zhdanov's invited paper described studies investigating the degradation mechanisms in DPALs, supported by some recent results. A second invited paper described experimental and theoretical studies with a caesium static cell device. The three contributing papers were from Ben-Gurion University of the Negev concerning supporting simulations of lasing events in static and flowing alkali-vapour cells.

The final session covered presentations on Laser Interaction, Effects and Components with three contributory papers. These papers covered analysis of the spectral emission from targets when illuminated with an intense laser beam, the interaction effects on composite materials and the development of a mid-wave infrared, high-power device. The first two papers in this session stimulated some very interesting discussion with regard to standoff target identification and discrimination during high energy laser irradiation.

All of the sessions were well attended, and as indicated above, the discussions were certainly very valuable. These discussions provided an invaluable insight into the way that the high-power source technology and systems are evolving and being applied to meet military capability requirements.

The current fiscal constraints and failure of presenters to attend had an adverse effect on the conference programme. Consequently, there was an impact on the content of the programme; however, despite this impediment, this was still a viable and most valuable conference.
