Volume 10438

Proceedings of SPIE 0277-786X, V. 10438

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

Emerging Imaging and Sensing Technologies for Security and Defence II, edited by Keith L. Lewis,
Richard C. Hollins, Gerald S. Buller, Robert A. Lamb, Proc. of SPIE Vol. 10438, 1043801
© 2017 SPIE · CCC code: 0277-786X/17/\$18 · doi: 10.1117/12.2302596

Proc. of SPIE Vol. 10438 1043801-1

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Publication of record for individual papers is online in the SPIE Digital Library.

**SPIE. DIGITAL
LIBRARY**

SPIDigitalLibrary.org

Paper Numbering: *Proceedings of SPIE* follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

v	<i>Authors</i>
vii	<i>Conference Committee</i>
ix	<i>Introduction</i>

SESSION 1 OPTICAL DEVICES AND TECHNIQUES

10438 03	Highly birefringent dual-mode nonlinear fibers for customised supercontinuum generation [10438-2]
10438 04	Infrared detector based on interband transition of semiconductor quantum well within p-n junction [10438-4]

SESSION 2 COMPUTATIONAL AND HYPERSPECTRAL IMAGING

10438 06	The simplicity, complexity, and benefits of multi-aperture imaging in the thermal infrared (Invited Paper) [10438-6]
10438 08	Digital holographic amplification of interferograms in the Michelson interferometer using the phase-only LCOS modulator [10438-8]

SESSION 3 OPTICAL AND IMAGE PROCESSING

10438 09	Image enhancement framework for low-resolution thermal images in visible and LWIR camera systems [10438-9]
10438 0A	A self-assembly optimization method for BAW filter layout design [10438-10]
10438 0B	BAW sensor readout circuit based on Pierce oscillator architecture [10438-11]

SESSION 4 APPLICATIONS

10438 0E	Assessment of tunneling magnetoresistors for magnetic imaging tomography [10438-16]
10438 0F	Detection of underground structures using UAV and field spectroscopy for defence and security in Cyprus [10438-17]
10438 0G	Magnetic induction tomography of objects for security applications [10438-18]

SESSION 5 JOINT SESSION I: QUANTUM METROLOGY, SENSING AND IMAGING

10438 0I **Single-particle imaging for biosensor applications** [10438-20]

SESSION 6 JOINT SESSION II: COMPONENTS AND TECHNOLOGIES FOR QUANTUM DEVICES

10438 0J **Investigation of properties of the confocal ring resonators** [10438-21]

POSTER SESSION

10438 0K **Simulation of continuously logical base cells (CL BC) with advanced functions for analog-to-digital converters and image processors** [10438-12]

10438 0L **Optimisation and evaluation of hyperspectral imaging system using machine learning algorithm** [10438-23]

Authors

Numbers in the index correspond to the last two digits of the seven-digit citation identifier (CID) article numbering system used in Proceedings of SPIE. The first five digits reflect the volume number. Base 36 numbering is employed for the last two digits and indicates the order of articles within the volume. Numbers start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B...0Z, followed by 10-1Z, 20-2Z, etc.

Conference Committee

Symposium Chair

Ric Schleijpen, TNO Defence, Security and Safety (Netherlands)

Symposium Co-Chairs

Karin Stein, Fraunhofer Institute of Optronics System Technologies and Image Exploitation IOSB (Germany)

Jan K. Jabczyński, Military University of Technology (Poland)

Conference Chairs

Keith L. Lewis, Sciovis Ltd. (United Kingdom)

Richard C. Hollins, Defence Science and Technology Laboratory (United Kingdom)

Gerald S. Buller, Heriot-Watt University (United Kingdom)

Robert A. Lamb, SELEX Galileo Ltd. (United Kingdom)

Conference Program Committee

Tibor Berceli, Budapest University of Technology and Economics (Hungary)

Arnaud Brignon, Thales Research & Technology (France)

Béatrice Cabon, Minatec (France)

John J. R. David, The University of Sheffield (United Kingdom)

Didier Decoster, Université des Sciences et Technologies de Lille (France)

Dominique Hamoir, ONERA (France)

Andrew R. Harvey, University of Glasgow (United Kingdom)

Christopher Hill, Malvern Lidar Consultants (United Kingdom)

Pengda Hong, Lehigh University (United States)

Javier Marti-Sendra, Universitat Politècnica de València (Spain)

Stephen P. McGeoch, Thales Optronics Ltd. (United Kingdom)

Ralf Ostendorf, Fraunhofer-Institut für Angewandte Festkörperphysik (Germany)

Miles J. Padgett, University of Glasgow (United Kingdom)

Miguel A. Piqueras, DAS Photonics (Spain)

Julien Poette, Institut National Polytechnique de Grenoble (France)

Béla Szentpáli, Research Institute for Technical Physics and Materials Science (Hungary)

Alexander Toet, TNO Defence, Security and Safety (Netherlands)
Mauro G. Varasi, Finmeccanica (Italy)
Jean-Pierre Vilcot, Université des Sciences et Technologies de Lille
(France)

Session Chairs

- 1 Optical Devices and Techniques
Andrew R. Harvey, University of Glasgow (United Kingdom)
- 2 Computational and Hyperspectral Imaging
Robert A. Lamb, Leonardo MW Ltd. (United Kingdom)
- 3 Optical and Image Processing
Robert A. Lamb, Leonardo MW Ltd. (United Kingdom)
- 4 Applications
Gerald S. Buller, Heriot-Watt University (United Kingdom)
- 5 Joint Session I: Quantum Metrology, Sensing and Imaging
Robert A. Lamb, Leonardo MW Ltd. (United Kingdom)
- 6 Joint Session II: Components and Technologies for Quantum Devices
Gerald S. Buller, Heriot-Watt University (United Kingdom)

Introduction

Interest in emerging imaging and sensing technologies has been of fundamental importance to the security and defence community for many years, where it has informed the process of horizon scanning for both government and industry. Indeed in the USA, the Defence Advanced Research Projects Agency (DARPA) recognised its role at the outset as an enabler for the development of disruptive solutions for providing enhanced capability in military operations. Challenges posed when sensing under the difficult conditions encountered in military environments lie at the heart of many applications of photonics. Evolving threats have necessitated the need for innovation in the way that reliable solutions are brought to bear when armed forces are deployed. The Emerging Imaging and Sensing Technologies conference brought together emerging activities in sensor and optical technologies and explored their application for those areas of application that are of current interest. This year the conference was organised around the following six topical areas with the last two organised as joint sessions with the conference on Quantum Technologies and Quantum Information Science:

- Optical devices and techniques
- Computational and hyperspectral imaging
- Optical and image processing
- Applications
- Quantum metrology, sensing and imaging
- Components and technologies for quantum devices.

Interest in photon-counting sensing technologies continues, building on advances highlighted in previous conferences. At the device level, contributions covered a diverse range of topics ranging from the development of dual-mode non-linear fibers for supercontinuum generation to the assessment of tunnelling magnetoresistors for magnetic imaging tomography. The benefits of multi-aperture imaging were also explored in relation to the thermal infrared, whilst another paper addressed image enhancement techniques for low-resolution imagery in the visible and LWIR regimes. Challenges for the future of imaging were addressed in a keynote paper, drawing on information generated in research activity supported by DARPA. In the quantum arena, research on active atomic clocks was explored in relation to the detection of gravitational anomalies, whilst another paper addressed the feasibility of single particle imaging for biosensor applications.

The conference drew on contributions from a number of different nations, including China, Cyprus, Czech Republic, India, Iran, Japan, Poland, Russian Federation, Ukraine, UK, and USA.
