Paper Numbering: *Proceedings of SPIE* follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Numbers in the index correspond to the last two digits of the seven-digit citation identifier (CID) article numbering system used in Proceedings of SPIE. The first five digits reflect the volume number. Base 36 numbering is employed for the last two digits and indicates the order of articles within the volume. Numbers start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B...0Z, followed by 10-1Z, 20-2Z, etc.

Introduction

The papers contained in this volume were presented at the twenty-eighth conference on Ophthalmic Technologies, held from January 27 to 28, 2018, at the Moscone Center in San Francisco, California as a part of the SPIE Photonics West BIOS Meeting.

A total of 51 papers and 41 posters were presented by scientists, clinicians, and engineers from academia and industry representing 20 countries spanning 4 continents. Topics included new approaches using digital holography for blood flow imaging, multimodal and multispectral adaptive-optics imaging and in vivo high resolution imaging of the cornea using full-field OCT.

The conference hosted its twelfth presentation on the topic of the unmet needs and impact of technology in the clinical area. Prof. Arun Singh, from the Department of Ophthalmology at the Cleveland Clinic in Cleveland, Ohio, described the current uses of lasers for treatment of ocular tumors and the needs for better approaches.

The eighteenth Pascal Rol Award was presented to Dr. Kazuhiro Kurokawa and his colleagues from Indiana University for their outstanding paper on "Method to investigate temporal dynamics of ganglion and other retinal cells in the living human eye" (10474-31). Established in memory of Dr. Pascal O. Rol, former chair and co-founder of the Ophthalmic Technologies conference, the award is in recognition of the best manuscript and presentation. Special congratulations to Dr. Kurokawa, who also won the award in 2009, for being the first repeat winner of the award! The 2018 finalists of the award, selected by the entire program committee among 86 abstract submissions, included Theodore Dubose (10474-15), Viacheslav Mazlin (10474-27), and Ruobing Qian (10474-36).

We are very grateful to Johnson and Johnson Vision for sponsoring the 2018 Pascal Rol award and keynote lecture through the Pascal Rol Foundation.

We thank the Program Committee members, session chairs, speakers and participants, as well as the SPIE staff for their support and dedication in making this conference a success.

We extend an invitation for the Ophthalmic Technologies XXIX conference, which is scheduled for Saturday February 2 and Sunday February 3, 2019 in San Francisco, CA.
