Proc. of SPIE Vol. 10479 1047901-1

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Paper Numbering: *Proceedings of SPIE* follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

vii	<i>Authors</i>
ix	<i>Conference Committee</i>
xi	<i>Introduction</i>

PHOTONIC DIAGNOSIS II

10479 07	Unraveling bacterial networks and their antimicrobial susceptibility on silicon microarchitectures using intrinsic phase-shift spectroscopy (Invited Paper) [10479-6]
10479 09	Elastic light scattering for clinical pathogens identification: application to early screening of <i>Staphylococcus aureus</i> on specific medium (Invited Paper) [10479-8]

PHOTONIC DIAGNOSIS III

10479 0D	Noninvasive monitoring local variations of fever and edema on human: potential for point-of-care inflammation assessment [10479-12]
----------	--

ANTIMICROBIAL BLUE LIGHT I

10479 0J	Antimicrobial blue light: a drug-free approach for inactivating pathogenic microbes (Invited Paper) [10479-18]
10479 0K	Blue light enhances the antimicrobial activity of honey against <i>Pseudomonas aeruginosa</i> [10479-19]
10479 0L	Microbial photoinactivation by 470 nm radiation: an investigation into the underlying photobiological mechanism [10479-20]
10479 0M	In vitro results of flexible light-emitting antimicrobial bandage designed for prevention of surgical site infections [10479-21]
10479 0N	Antimicrobial blue light inactivation of biofilms formed by clinical isolates of multidrug-resistant microorganisms [10479-22]
10479 0O	Antimicrobial blue light inactivation of <i>Neisseria gonorrhoeae</i> [10479-23]

ANTIMICROBIAL BLUE LIGHT II

- 10479 OR **Staphyloxanthin photobleaching sensitizes methicillin-resistant *Staphylococcus aureus* to reactive oxygen species attack (Translational Best Paper Award Winner) [10479-26]**
- 10479 OS **Photodynamic activity of natural anthraquinones on fibroblasts [10479-27]**

ANTIMICROBIAL PHOTODYNAMIC INACTIVATION/THERAPY II

- 10479 OZ **A quaternary ammonium modified coumarin derivative for antimicrobial photodynamic therapy [10479-34]**
- 10479 11 **Potassium iodide potentiates antimicrobial photodynamic inactivation mediated by Rose Bengal: in vitro and in vivo studies [10479-36]**

ANTIMICROBIAL PHOTODYNAMIC INACTIVATION/THERAPY III

- 10479 12 **Progress toward development of photodynamic vaccination against infectious/malignant diseases and photodynamic mosquitocides (Invited Paper) [10479-37]**
- 10479 14 **A comparative analysis of aPDI effect of phenothiazinium dyes in presence of inorganic salt as potentiator [10479-39]**

ANTIMICROBIAL PHOTODYNAMIC INACTIVATION/THERAPY IV

- 10479 17 **Photodynamic therapy to destroy pneumonia associated microorganisms using external irradiation source [10479-42]**
- 10479 18 **Potential by potassium iodide using TPPS4 for antimicrobial photodynamic inactivation [10479-43]**

ULTRAVIOLET AND INFRARED IRRADIATION TREATMENT

- 10479 1A **Healthcare acquired infection (HAIs): a deadly problem that is preventable: UV can help, what's holding it back? (Invited Paper) [10479-45]**
- 10479 1B **Identification of barriers and research opportunities to improve the effective and efficient application of adjunct UVC surface disinfection in healthcare (Invited Paper) [10479-46]**
- 10479 1C **Insights into the working mechanism of water filtered infrared A (wIRA) irradiation on *Chlamydia trachomatis* serovar E [10479-48]**
- 10479 1D **Far-UVC light applications: sterilization of MRSA on a surface and inactivation of aerosolized influenza virus [10479-60]**

POSTER SESSION

- 10479 1G **Efficacy of antimicrobial 405 nm blue-light for inactivation of airborne bacteria [10479-51]**
- 10479 1K **Effectiveness of photobiomodulation therapy and aerobic exercise training on articular cartilage in an experimental model of osteoarthritis in rats [10479-55]**
- 10479 1L **Effects of the photodynamic therapy on microbial reduction of diabetic ulcers in humans [10479-56]**

Authors

Numbers in the index correspond to the last two digits of the seven-digit citation identifier (CID) article numbering system used in Proceedings of SPIE. The first five digits reflect the volume number. Base 36 numbering is employed for the last two digits and indicates the order of articles within the volume. Numbers start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B...0Z, followed by 10-1Z, 20-2Z, etc.

Conference Committee

Symposium Chairs

James G. Fujimoto, Massachusetts Institute of Technology
(United States)

R. Rox Anderson, Wellman Center for Photomedicine, Massachusetts
General Hospital (United States) and Harvard Medical School
(United States)

Program Track Chair

Brian Jet-Fei Wong, Beckman Laser Institute and Medical Clinic
(United States)

Conference Chair

Tianhong Dai, Wellman Center for Photomedicine (United States) and
Massachusetts General Hospital (United States) and Harvard
Medical School (United States)

Conference Program Committee

Akilan Palanisami, Wellman Center for Photomedicine (United States)
and Massachusetts General Hospital (United States) and Harvard
Medical School (United States)

Kristen C. Maitland, Texas A&M University (United States)

Ying Wang, Chinese PLA General Hospital (China)

Michael R. Hamblin, Wellman Center for Photomedicine
(United States)

Alessandro M. Deana, UNINOVE (Brazil)

Session Chairs

- 1 Photonic Diagnosis I: Raman spectroscopy
Jürgen Popp, Leibniz-Institut für Photonische Technologien e.V.
(Germany)
- 2 Photonic Diagnosis II
Walfre Franco, Wellman Center for Photomedicine (United States)
- 3 Photonic Diagnosis III
Zeev Zalevsky, Bar-Ilan University (Israel)

- 4 Photonic Diagnosis IV
Fatih Inci, Stanford University (United States)
- 5 Antimicrobial Blue Light I
Alessandro M. Deana, UNINOVE (Brazil)
- 6 Antimicrobial Blue Light II
Tianhong Dai, Wellman Center for Photomedicine (United States) and
Massachusetts General Hospital (United States) and Harvard
Medical School (United States)
- 7 Antimicrobial Photodynamic Inactivation/Therapy I
Long Chiang, University of Massachusetts Lowell (United States)
- 8 Antimicrobial Photodynamic Inactivation/Therapy II
Michael R. Hamblin, Wellman Center for Photomedicine
(United States)
- 9 Antimicrobial Photodynamic Inactivation/Therapy III
Silvia C. Nunez, University Brasil (Brazil)
- 10 Antimicrobial Photodynamic Inactivation/Therapy IV
Kwang Poo Chang, Rosalind Franklin University of Medicine and
Science (United States)
- 11 Ultraviolet and Infrared Irradiation Treatment
Richard Martinello, Yale School of Medicine (United States)

Introduction

Infectious diseases continue to rank high among global mortality factors and inflammations have been identified as a root cause of many chronic disorders. Over 95% of the mortality caused by infections and inflammatory diseases is due to the lack of proper diagnosis and treatment. The inability of physicians to characterize infections at the point of care has led to broad overuse of broad-spectrum antibiotics due to the risk of missed diagnosis. Furthermore, the rise of antibiotic-resistant pathogens has complicated the choice of the treatment. It is now indisputable that antibiotic resistance is life-threatening in the same sense as cancer, both in the number of cases and the likely outcome. In 2015, the White House announced the "National Action Plan for Combating Antibiotic-Resistant Bacteria". It is noted in the National Action Plan that "New therapeutics, vaccines, and diagnostics are urgently needed to combat emerging and reemerging antibiotic-resistant pathogens".

Rapid, optically based diagnosis could play an important role by informing treatment during this critical initial window. In addition, light-based antimicrobial therapies have attracted increasing attention due to their ability to eradicate pathogens regardless of antibiotic resistance and the fundamental improbability of the pathogens themselves to develop resistance to these light-based therapies due to the rather non-specific nature of the targets.

To communicate and disseminate new findings in the area of light-based diagnosis and treatment of infections and inflammatory diseases, to increase collaborations between research groups, and to supplement and enhance the training of early-stage researchers, we founded a new conference of "Photonic Diagnosis and Treatment of Infections and Inflammatory Diseases (Conference 10479)" at the SPIE Photonics West BioS in 2018. Technical and scientific papers related to advanced light-based diagnostic and therapeutic technologies that push beyond the scope of the state-of-the-art in basic science and clinical practice are solicited by this conference. The topics covered in the conference include photonic diagnosis of infections using Raman spectroscopy, intrinsic phase-shift Spectroscopy, interferometric imaging, elastic light scattering, label-free multiphoton imaging, reflectance spectrometry, confocal fluorescence imaging, etc.; and phototherapy for infections using antimicrobial photodynamic therapy, antimicrobial blue light therapy, ultraviolet C irradiation, water filtered infrared A irradiation, photodynamic vaccination, etc.

The present volume contains selected papers of the new conference at the SPIE Photonics West BioS 2018, held on January 29-31, 2018 in San Francisco, California. This conference received 61 papers. After an initial review, 49 papers were selected as oral presentations and 8 as poster presentations. Each paper received 2-6 reviews. Paper 10479-26 entitled "Drug-free annihilation of

methicillin-resistant staphylococcus aureus via staphyloxanthin photobleaching" and authored by Ms. Puting Dong and her colleagues from the Boston University was selected from over 300 papers from different conferences for the Translational Research Best Paper Award of SPIE Photonics West 2018. Finally, 23 papers were included for publication in the Conference Proceedings.

As Conference Chair, I have many people to thank.

First, I would like to extend my special thanks to Drs. Rox Anderson and Tayyaba Hasan from the Wellman Center of Photomedicine for their endorsements on my proposal. I thank all the authors who submitted their papers to the conference. I thank Conference Committee Members Dr. Kristen C. Maitland, Dr. Alessandro M. Deana, Dr. Akilan Palanisami, and Dr. Ying Wang for their valuable time devoted to reviewing the papers. I also thank all Session Chairs. The largest burden fell upon their experienced shoulders. This conference would not have had such a good start without their contributions. It is my pleasant duty to acknowledge the financial support from Ondine Biomedical Inc., Ushio Inc., and Gel4Med, Inc.

Finally, I would like to give my gratitude to the SPIE staff for the conference and for assembling the Proceedings. We are looking forward to SPIE Photonics West 2019 that will be held at the same time and location next year.
