Proc. of SPIE Vol. 10523 1052301-1

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

SPIE. DIGITAL LIBRARY

SPIDigitalLibrary.org

Paper Numbering: *Proceedings of SPIE* follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

vii	<i>Authors</i>
ix	<i>Conference Committee</i>
xi	<i>Introduction</i>

DIFFERENT VIEWS OF LASER 3D PROCESSING

10523 02	Additive manufacturing of reflective and transmissive optics: potential and new solutions for optical systems (Invited Paper) [10523-1]
10523 05	Development of a hybrid exposure system for lithography-based additive manufacturing technologies [10523-4]
10523 07	Fiber-fed laser-heated process for printing transparent glass from single mode optical fiber [10523-6]

MICROFLUIDIC

10523 0A	3D microfluidic fabrication using a low refractive index polymer for clear microscopic observation at the fluid boundary (Invited Paper) [10523-10]
10523 0B	Dynamic programming approach to adaptive slicing for optimization under a global volumetric error constraint [10523-11]
10523 0C	Selective laser melting of borosilicate glass using ultrashort laser pulses [10523-12]

POLYMERS OPTICAL MATERIAL 3D

10523 0E	Tailored irradiation by VCSEL for controlled thermal states in thermoplastic tape placement [10523-15]
10523 0G	High-throughput 3D printing of customized imaging lens [10523-17]

SPECIAL SESSION: LASER PEENING/CLADDING

- 10523 OK **Development of experimental station for laser shock peening at HiLASE (Invited Paper)**
[10523-21]
- 10523 OM **Synchrotron x-ray induced real time observations of CoCr alloy layer formation by micro laser
cladding** [10523-23]
- 10523 ON **Additive manufacturing of reflective optics: evaluating finishing methods** [10523-24]

FORWARD TRANSFER

- 10523 OR **Laser-induced forward transfer (LIFT) of 3D microstructures** [10523-29]

STATUS ADDITIVE TECHNOLOGY

- 10523 OS **Development and qualification of additively manufactured parts for space (Invited Paper)**
[10523-30]
- 10523 OT **All inkjet printed frequency steered phased array antennas with multi angle receiving
demonstrated via simulation** [10523-32]

MICROPRINTING

- 10523 OX **Synchronization of linear stages and galvo-scanners for efficient direct laser fabrication of
polymeric 3D meso-scale structures** [10523-36]

METAL PROCESSING

- 10523 OY **The effect of laser focus and process parameters on microstructure and mechanical properties
of SLM Inconel 718 (Invited Paper)** [10523-37]
- 10523 IO **Designing for 3D printing: direct metal laser sintering** [10523-39]
- 10523 11 **4D manufacturing of intermetallic SMA fabricated by SLM process** [10523-40]
- 10523 12 **Selective laser melting of copper using ultrashort laser pulses at different wavelengths**
[10523-41]

NEW PROCESSES AND PROCESS CONTROL I

- 10523 15 **Rapid TMC laser prototyping: compositional and phase-structural sustainability via combinatorial design of titanium-based gradient alloy reinforced by nano-sized TiC or TiB₂ ceramics** [10523-44]
- 10523 16 **A compact beam diagnostic device for 3D additive manufacturing systems** [10523-45]
- 10523 17 **Solid-state microchip based scanning laser 3D system** [10523-46]

NEW PROCESSES AND PROCESS CONTROL II

- 10523 19 **Optics to control thermal effects in selective laser melting** [10523-48]
- 10523 1A **In-situ x-ray observation of molten pool dynamics while laser cladding with blue direct diode laser** [10523-49]
- 10523 1B **Thermal field monitoring and analysis of its influence on Direct Laser Deposition of single tracks of a nickel superalloy** [10523-50]
- 10523 1C **Investigation of direct metal laser sintering process of iron powder with low laser power** [10523-51]

Authors

Numbers in the index correspond to the last two digits of the seven-digit citation identifier (CID) article numbering system used in Proceedings of SPIE. The first five digits reflect the volume number. Base 36 numbering is employed for the last two digits and indicates the order of articles within the volume. Numbers start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B...0Z, followed by 10-1Z, 20-2Z, etc.

Conference Committee

Symposium Chairs

Koji Sugioka, RIKEN (Japan)
Reinhart Poprawe, Fraunhofer-Institut für Lasertechnik (Germany)

Symposium Co-chairs

Xianfan Xu, Purdue University (United States)
Beat Neuenschwander, Berner Fachhochschule Technik und Informatik (Switzerland)

Program Track Chairs

Bo Gu, Bos Photonics (United States)
Stefan Kaierle, Laser Zentrum Hannover e.V. (Germany)

Conference Chairs

Henry Helvajian, The Aerospace Corporation (United States)
Bo Gu, Bos Photonics (United States)
Alberto Piqué, U.S. Naval Research Laboratory (United States)

Conference Co-chairs

Corey M. Dunskey, Aeos Consulting, Inc. (United States)
Jian Liu, PolarOnyx, Inc. (United States)

Conference Program Committee

Hongqiang Chen, GE Global Research (United States)
John T. Fourkas, University of Maryland, College Park (United States)
Youping Gao, Aerojet Rocketdyne (United States)
Craig Goldberg, Newport Corporation (United States)
Weidong Huang, Northwestern Polytechnical University (China)
Yuji Sano, ImPACT (Japan)
Michael Thiel, Nanoscribe GmbH (Germany)
Paul S. Unwin, Stanmore Implants (United Kingdom)
Augustine M. Urbas, Air Force Research Laboratory (United States)
Martin Wegener, Karlsruher Institut für Technologie (Germany)

Session Chairs

Henry Helvajian, The Aerospace Corporation (United States)

Introduction

The fifth meeting of *Laser 3D Manufacturing* at Photonics West 2018 comprised thirteen sessions distributed over four full days of presentations. A joint session with the *Advanced Fabrication Technologies for Micro/Nano Optics and Photonics XI Conference* provided a technical interchange forum between a community that is fabricating structures with novel materials and a community developing 3D manufacturing processes. The *Laser 3D Manufacturing* conference also held a special session on laser peening/cladding; a commercially established process which could be incorporated into a laser metal additive process for improving surface finish and material strength/fatigue properties. Also added to the event was a Panel Discussion "3D Printing and Industry 4.0: An Industry Perspective" sponsored by SPIE's Industry Development Group that had nearly 200 in attendance over a 90-minute segment.

Presentations at the conference included laser 3D fabrication in polymers, glass, metals and composites. Improvements in the processing technology are apparent even over the five years that this meeting has been held, with presentations on qualification and reliability showing data that the industry is coming to grips with the issue by way of process control technology and sensors. However, there are still outstanding issues and some were highlighted at the Industry Panel Discussion:

- 1) In 3D manufacturing, how can you keep the intellectual property (IP) safe when 3D digital CAD files are transferred across machines and possibly over continents?
- 2) How can you keep your processing machine from being "hacked" when the tool operates via digital files?

Both are matters of security that must be addressed for 3D manufacturing to become ubiquitous in the production world. While Photonics West is not the forum for digital security, the Laser 3D conference chairs have taken the action item to host a special session on security at the 2019 meeting.

Laser 3D manufacturing appears to be gaining acceptance by an industry that has its sights set not only in the production of simple commodities but also for very high value items such as that used in the aerospace industry. We see the future in the development of new materials for additive manufacturing and in the design and demonstration of 3D structures that have complex properties (e.g. folding).

But first, the community needs to establish process control so repeatability and reliability become "second nature."

Finally, the conference organizers wish to thank, the PolarOnyx Corporation of San Jose, California (United States) for their sponsorship which allowed the support of students.
