Volume 10549

Proceedings of SPIE 0277-786X, V. 10549

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

Complex Light and Optical Forces XII, edited by Enrique J. Galvez, David L. Andrews,
Jesper Glückstad, Proc. of SPIE Vol. 10549, 1054901 · © 2018 SPIE
CCC code: 0277-786X/18/\$18 · doi: 10.1117/12.2323202

Proc. of SPIE Vol. 10549 1054901-1

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Paper Numbering: *Proceedings of SPIE* follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

v	<i>Authors</i>

xi	<i>Introduction</i>

FUNDAMENTAL ASPECTS OF COMPLEX LIGHT

10549 03	Partially coherent vortex beams (Invited Paper) [10549-2]
10549 05	Localization of light: beginning of a new optics [10549-4]

QUANTUM EFFECTS

10549 08	Spatial modes for testing indefinite causal order (Invited Paper) [10549-7]
10549 09	Creating the first Bose-Einstein condensate in space [10549-8]

OPTICAL MODES

10549 0B	Generation of fractal structured eigenmodes from lasers [10549-10]
10549 0D	Core-shell (TiO₂@Silica) nanoparticles for random lasers [10549-12]

SPIN-ORBIT COMPLEX LIGHT

10549 0E	Complex light-assisted optical metrology techniques (Invited Paper) [10549-13]
10549 0F	Spectral anomaly of ultrashort vortex pulses with axially oscillating twist [10549-14]
10549 0J	Experimental demonstration of broadband generation of optical vortices using asymmetrically spliced fibers [10549-18]
10549 0K	Realization of the spin-dependent manipulation of structured light by tailoring the polarization [10549-57]

COMPLEX LIGHT SENSING

10549 0L	Polarization state vector beam spectrum analyzer using q-plates encoded onto a spatial light modulator (Invited Paper) [10549-19]
----------	--

- 10549 OM **Determination of the topological charge of complex light beams by shearing interference from a wedged optical flat (Travel Support Award) [10549-21]**

SPATIALLY VARIABLE POLARIZATION

- 10549 OP **Generation of arbitrary axisymmetrically polarized pulses with a broadband spectrum (Invited Paper) [10549-24]**
- 10549 OS **Customized focal light landscapes by complex vectorial fields for advanced optical trapping [10549-27]**

OPTICAL FORCES

- 10549 OX **Thermodynamics of radiation pressure and photon momentum (Part 2) (Invited Paper) [10549-32]**

CHIRALITY IN LIGHT AND MATTER

- 10549 15 **Chiroptical interactions between twisted light and chiral media [10549-40]**

SPIN-ORBIT CONTROL

- 10549 1A **Pancharactnam-Berry phase used for realizing spin-dependent propagation and polarization measurement [10549-45]**

ENHANCED OPTICAL TRAPPING

- 10549 1F **Integrated plasmonic dimers: a platform for ultra-efficient trapping of nanoparticles [10549-50]**

SORTING

- 10549 1I **Software for real-time light shaping and biophotonics applications [10549-54]**
- 10549 1J **Cell growth regulation studies on our biophotonics workstation [10549-55]**

Authors

Numbers in the index correspond to the last two digits of the seven-digit citation identifier (CID) article numbering system used in Proceedings of SPIE. The first five digits reflect the volume number. Base 36 numbering is employed for the last two digits and indicates the order of articles within the volume. Numbers start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B...0Z, followed by 10-1Z, 20-2Z, etc.

Introduction

The 2018 edition of the conference Complex Light and Optical Forces XII featured 58 submissions. The high number of presentations spanned three full days of the Photonics West Meeting in San Francisco, California. The themes of the conference included fundamental findings on complex light beams and research on new interactions between light and matter. Topics of much interest today that were discussed in the presentations include the generation and detection of spatial modes in new ways, further studies of modes that combine spatial and polarization aspects of light, and the role of chirality in forces of interactions between light and matter.

The set of articles in this volume are representative of the discussions at the conference, featuring both fundamental and applied aspects of complex light and interactions. They are indicative of the vitality of this line of research that continues to grow with newly discovered phenomena and new applications.
