SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

Computational Optics II, edited by Daniel G. Smith, Frank Wyrowski, Andreas Erdmann, Proc. of SPIE
Vol. 10694, 1069401 · © 2018 SPIE · CCC code: 0277-786X/18/\$18 · doi: 10.1117/12.2503345

Proc. of SPIE Vol. 10694 1069401-1

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Paper Numbering: *Proceedings of SPIE* follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

v	<i>Authors</i>
vii	<i>Conference Committee</i>
ix	<i>Introduction</i>

SESSION 1 DESIGN AND OPTIMIZATION

10694 02	Multi-resonant silicon nanoantennas by evolutionary multi-objective optimization (Invited Paper) [10694-1]
10694 03	Optimization and tolerancing of highly dispersive multilayer gratings for laser applications [10694-2]
10694 04	An application of the virtual prototyping approach to design of VR, AR, and MR devices free from the vergence-accommodation conflict [10694-3]
10694 06	Hybrid digital-optical imaging design for reducing surface asphericity cost while keeping high performance [10694-5]
10694 07	Solving inverse problems appearing in design and metrology of diffractive optical elements by using Bayesian optimization [10694-6]
10694 08	Application of deep learning algorithms for Lithographic mask characterization [10694-7]

SESSION 2 COMPUTATIONAL IMAGING

10694 0B	Fourier ptychography for lithography high NA systems [10694-10]
10694 0C	Optical phase retrieval using four rotated versions of a single binary mask: simulation results [10694-11]
10694 0D	Realistic image synthesis in presence of birefringent media by backward ray tracing technique [10694-12]

SESSION 3 MICROSTRUCTURES AND ILLUMINATION

10694 0F	Rigorous modeling of light absorption in nanostructured materials using a parallel high order finite element time-domain technique [10694-14]
----------	--

- 10694 OH **Simulation study of illumination effects in high-NA EUV lithography** [10694-16]
- 10694 OI **Fast-physical optics modeling of microscopy system with structured illumination** [10694-17]

SESSION 4 PHYSICAL OPTICS I

- 10694 OJ **Surface polarization scattering generated from a birefringent material with rough surface**
[10694-19]
- 10694 OM **Accurate propagation of ultrashort pulses in nonlinear waveguides using propagation models
for the analytic signal** [10694-22]

SESSION 5 PHYSICAL OPTICS II

- 10694 ON **Density estimation in optical phase space for optimizing micro-optical elements on freeform
surfaces (Invited Paper)** [10694-23]
- 10694 OO **Semi-analytical Fourier transform and its application to physical-optics modelling** [10694-24]
- 10694 OP **Using the pupil difference probability density to understand OTF** [10694-25]
- 10694 OQ **The Gouy phase shift reinterpreted via the geometric Fourier transform** [10694-26]
- 10694 OR **Efficient optical simulation of nano structures in thin-film solar cells** [10694-28]

POSTER SESSION

- 10694 OS **3D ray tracing model for laser beams influenced by thermal lensing in solid-state gain media**
[10694-29]
- 10694 OT **Analysis of three-dimensional diffraction wavefront error for point diffraction interferometer**
[10694-32]
- 10694 OV **Multi-mode computing optical imaging technology based on software definition micro-nano
satellite** [10694-34]

Authors

Numbers in the index correspond to the last two digits of the seven-digit citation identifier (CID) article numbering system used in Proceedings of SPIE. The first five digits reflect the volume number. Base 36 numbering is employed for the last two digits and indicates the order of articles within the volume. Numbers start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B...0Z, followed by 10-1Z, 20-2Z, etc.

Conference Committee

Symposium Chair

Wilhelm Ulrich, Carl Zeiss AG (Germany)

Symposium Co-chairs

Juan Carlos Miñano, Universidad Politécnica de Madrid (Spain)
David M. Williamson, Nikon Research Corporation of America
(United States)

Honorary Symposium Chair

Tina E. Kidger, Kidger Optics Associates (United Kingdom)

Conference Chairs

Daniel G. Smith, Nikon Research Corporation of America
(United States)
Frank Wyrowski, Friedrich-Schiller-Universität Jena (Germany)
Andreas Erdmann, Fraunhofer-Institut für Integrierte Systeme und
Bauelementetechnologie IISB (Germany)

Conference Programme Committee

Miguel A. Alonso, University of Rochester (United States)
Sven Burger, Konrad-Zuse-Zentrum für Informationstechnik Berlin
(Germany)
Donis G. Flagello, Nikon Research Corporation of America
(United States)
Ari T. Friberg, University of Eastern Finland (Finland)
Hans Peter Herzig, Ecole Polytechnique Fédérale de Lausanne
(Switzerland)
Roarke Horstmeyer, Duke University (United States)
Olivier J. F. Martin, Ecole Polytechnique Fédérale de Lausanne
(Switzerland)
Carsten Rockstuhl, Karlsruher Institut für Technologie (Germany)
Michael Totzeck, Carl Zeiss SMT GmbH (Germany)
H. Paul Urbach, Technische Universiteit Delft (Netherlands)
Wei Wang, Heriot-Watt University (United Kingdom)
Zeev Zalevsky, Bar-Ilan University (Israel)

Session Chairs

- 1 Design and Optimization
Frank Wyrowski, Friedrich-Schiller-Universität Jena (Germany)
Huiying Zhong, LightTrans International (Germany)
- 2 Computational Imaging
Andreas Erdmann, Fraunhofer-Institut für Integrierte Systeme und Bauelementetechnologie IISB (Germany)
- 3 Microstructures and Illumination
Daniel G. Smith, Nikon Research Corporation of America (United States)
- 4 Physical Optics I
Miguel A. Alonso, University of Rochester (United States)
- 5 Physical Optics II
Martin Hammerschmidt, JCMwave GmbH (Germany)

Introduction

As in years past, this year's conference in Computational Optics (formerly Physical Optics) was filled with excellent speakers and an equally attentive audience that provided many questions and lively discussions.

The symposium's plenary speaker, Federico Capasso, gave an excellent talk describing his groundbreaking work with metasurfaces which provided a good transition into our first session, which included related talks on multi-resonant silicon nanoantennas, and highly dispersive multilayer gratings. As usual, our conference included many applications of computation optics including VR, lithography, holography, solar power, ptychography, image synthesis, and many talks exploring aspects and methods of computational light propagation.

Daniel G. Smith
Frank Wyrowski
Andreas Erdmann
