Paper Numbering: *Proceedings of SPIE* follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Introduction

Dear Distinguished Delegates and Guests,

The Organizing Committee warmly welcomes you to the Tenth International Conference on Machine Vision (ICMV 2017), held during November 13-15, 2017, in Vienna, Austria.

The ICMV 2017 aims to present the latest research and results of scientists (Professors, students, PhD Students, engineers, and post-doctoral scientists) related to Machine Vision. The conference provides opportunities for the delegates of different areas to exchange new ideas and application experiences face to face, to establish business or research relations, and to find global partners for future collaboration.

The keynote speeches from leading experts in the field from all around the globe will present the state-of-the-art in all major fields of Machine Vision. The highly selective peer-review process will guarantee the quality of accepted papers that will be published by SPIE.

After the peer-review process, the submitted papers were selected on the basis of originality, significance, and clarity for the purpose of the conference. The selected papers and additional late-breaking contributions presented as lectures will make an exciting technical program.

The proceeding records the papers presented at the conference. The main conference theme and track is Machine Vision. We hope all participants and other interested readers benefit scientifically from the proceedings and find it stimulating in the process.

On behalf of the conference committees, we are glad to have the pleasure to cordially invite you to this outstanding event, to share your latest research findings and/or R&D works with the research community by submitting papers to this conference.

Looking forward to seeing you in Vienna, for ICMV 2017.

With our warmest regards,

Antanas Verikas
Petia Radeva
