Volume 10732

Proceedings of SPIE 0277-786X, V. 10732

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

Spintronics XI, edited by Henri-Jean Drouhin, Jean-Eric Wegrowe, Manijeh Razeghi,
Henri Jaffès, Proc. of SPIE Vol. 10732, 1073201 · © 2018 SPIE
CCC code: 0277-786X/18/\$18 · doi: 10.1117/12.2515621

Proc. of SPIE Vol. 10732 1073201-1

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Publication of record for individual papers is online in the SPIE Digital Library.

SPIE. DIGITAL LIBRARY
SPIDigitalLibrary.org

Paper Numbering: *Proceedings of SPIE* follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

vii	<i>Authors</i>
ix	<i>Conference Committee</i>
xiii	<i>Introduction</i>

SPIN PUMPING II

10732 07	Estimating spin diffusion length from spin pumping experiments (Invited Paper) [10732-6]
----------	---

TRANSPORT IN SPIN-TEXTURED MEDIA AND DEVICES

10732 0B	Magnetic domain wall motion at the nodes and antinodes of high frequency strain waves (Invited Paper) [10732-10]
10732 0C	Investigation of charge-to-spin conversion in GeTe (Invited Paper) [10732-11]

OXIDES MAGNONICS

10732 0F	Probing magnetic anisotropy in epitaxial $\text{La}_{0.67}\text{Sr}_{0.33}\text{MnO}_3$ thin films and nanostructures via planar Hall effect (Invited Paper) [10732-14]
10732 0G	Synthesis and ferrimagnetic properties of $\text{Y}_{3(1-x)}\text{Ti}_{3x}\text{Fe}_5\text{O}_{12}$ powders (Invited Paper) [10732-15]

TOPOLOGICAL MATTER

10732 0N	Anomalies in magneto-transport in spin-orbit coupled systems (Invited Paper) [10732-22]
----------	--

SPIN-DYNAMICS IN SEMICONDUCTORS

10732 0P	Domain wall dynamics in GaMnAsP films with perpendicular anisotropy (Invited Paper) [10732-24]
----------	---

SPIN-ORBIT TORQUES IN TOPOLOGICAL INSULATORS

- 10732 0U **Conductive BiSb topological insulator with colossal spin Hall effect for ultra-low power spin-orbit-torque switching (Invited Paper)** [10732-29]
- 10732 0V **Phase-coherent transport in topological insulator nanocolumns and nanoribbons (Invited Paper)** [10732-30]

UNIDIRECTIONAL AND SPIN-HALL MAGNETORESISTANCE

- 10732 12 **Unidirectional response in spin-torque driven magnetization dynamics (Invited Paper)** [10732-37]
- 10732 15 **Theory of bilinear magneto-electric resistance from topological-insulator surface states (Invited Paper)** [10732-40]

SPIN-ORBIT INTERACTION

- 10732 16 **Spin-orbit coupling in vortex light: can it be revealed in fundamental electronic transitions? (Keynote Paper)** [10732-41]
- 10732 19 **Magneto-Raman spectroscopy of spin-density excitations in (001)-grown GaAs-AlGaAs quantum wells in the regime of the persistent spin helix (Invited Paper)** [10732-44]

SUPERCONDUCTIVITY AND MAJORANA FERMIONS I

- 10732 1M **Ferromagnetic Josephson junctions for cryogenic memory (Invited Paper)** [10732-57]
- 10732 1N **Superconducting quantum dot and the sub-gap states (Invited Paper)** [10732-58]

SPIN LOGIC

- 10732 1P **Cascaded spintronic logic gates based on graphene nanoribbon magnetoresistance: all-carbon spin logic (Invited Paper)** [10732-60]
- 10732 1Q **Spin textures patterned via thermally assisted magnetic scanning probe lithography for magnonics (Invited Paper)** [10732-61]

SUPERCONDUCTIVITY AND MAJORANA FERMIONS II

- 10732 1S **Conductance spectroscopy of vertical topological Josephson junction Nb/(Bi_{0.5}Sb_{0.5})₂Te₃/Nb (Invited Paper)** [10732-63]

MAGNETIC TUNNEL JUNCTIONS

- 10732 1U **Fast, reliable spin-orbit-torque switching in three terminal magnetic tunnel junctions with Hf dusting layer (Invited Paper)** [10732-65]
- 10732 1W **Performance analysis of DSHE based memories (Invited Paper)** [10732-67]

ULTRA-FAST PHENOMENA AND MAGNETIZATION INERTIA

- 10732 2E **On the origin of magnetic inertia: a rigorous relativistic Dirac theory derivation (Invited Paper)** [10732-85]
- 10732 2F **Spin, spinning top, and magnetic monopole (Invited Paper)** [10732-86]

SPIN-TO-CHARGE CONVERSION AT OXIDE INTERFACES

- 10732 2P **Theory of charge-spin conversion at oxide interfaces: the inverse spin-galvanic effect (Invited Paper)** [10732-96]

ULTRAFast THz SPIN DYNAMICS

- 10732 2V **Ultrafast spin current generation in ferromagnetic thin films (Invited Paper)** [10732-102]

NEW CONCEPTS IN SPINTRONICS

- 10732 30 **Self-field, radiated energy, and radiated linear momentum of an accelerated point charge (Invited Paper)** [10732-107]

EMERGING CONCEPTS IN SPIN TRANSPORT

- 10732 35 **Spin correlations at hopping in magnetic structures: from tunneling magnetoresistance to single-spin transistor (Invited Paper)** [10732-112]

SPIN-ORBITRONICS IN TOPOLOGICAL INSULATORS

- 10732 38 **Voltage-controlled topological-spin switch for ultra-low-energy computation (Invited Paper)**
[10732-116]

BIO-INSPIRED AND NEUROMORPHIC COMPUTATION

- 10732 3B **Electric field modulation of tunneling anisotropic magnetoresistance across the Schottky interface of Ni/Nb-doped SrTiO₃ at room temperature (Invited Paper)**
[10732-119]

Authors

Numbers in the index correspond to the last two digits of the seven-digit citation identifier (CID) article numbering system used in Proceedings of SPIE. The first five digits reflect the volume number. Base 36 numbering is employed for the last two digits and indicates the order of articles within the volume. Numbers start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B...0Z, followed by 10-1Z, 20-2Z, etc.

Introduction

The eleventh edition of the Spintronics symposium gathered about one hundred and thirty speakers in San Diego, California (United States) from Sunday 19 August to Thursday 23 August 2018.

In line with the previous editions, Spintronics XI symposium, held in the framework of the Optics + Photonics symposium, covered hot topics in Spintronics. The conference was an invaluable opportunity for informal and stimulating discussions between experts as well as for networking in a friendly atmosphere, testifying to the continued dynamism of our field of research.

With 34 oral sessions, the symposium gave a broad spectrum of the active and emerging fields in spintronics. Recent results at the forefront of theoretical, experimental, and technological developments have been discussed. An important place has been given to Spinorbitronics Phenomena with 5 focused sessions, Topological Matter (4 sessions), Dzyaloshinskii-Moriya Interaction and Skyrmions (3 sessions), Ultrafast Magnetism and THz Spintronics (3 sessions), whose application prospects are promising.

Special attention has been paid (with 2 sessions) to the developments of Magnetic MTJ and RAMs in connection with industrial applications, Spin Injection, Spin Pumping, Two-Dimensional Materials, Spin-to-Charge Conversion, and Emerging Concepts.

Many other challenging topics were covered including (with one session) Magnetic Imaging, Spin Logic, Spin VECSELs, Neuromorphic and Bio-Inspired Applications, Spin Dynamics, Molecular Spintronics, and Oxide-Based Spintronics.

Additionally, we are grateful to the SPIE staff and to the Program Committee members who did a tremendous work. Special thanks to all colleagues and friends who helped organizing focused sessions. We warmly thank all the authors and speakers for their active participation: they have again made this conference a great success.
