Paper Numbering: *Proceedings of SPIE* follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Introduction

The 5th South African Conference on Sensors, MEMS and Electro-Optical Systems (SMEOS 2018) was held 8–10 October 2018 in Skukuza, the main rest camp in the Kruger National Park, South Africa. Sensors and electro-optical systems are technologies with many applications worldwide and are also identified as such by the South African government through the Departments of Science and Technology.

The aim of SMEOS 2018 was to provide a common forum for international researchers and developers to exchange information about their latest research findings, ideas, developments and applications in all areas pertaining to design, fabrication, and application in the fields of interest to SMEOS 2018. This is a relatively small field of expertise in South Africa and working together with international colleagues is of the utmost importance.
