Volume 11090

Proceedings of SPIE 0277-786X, V. 11090

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

Spintronics XII, edited by Henri-Jean M. Drouhin, Jean-Eric Wegrowe, Manijeh Razeghi, Henri Jaffrès,
Proc. of SPIE Vol. 11090, 1109001 · © 2019 SPIE · CCC code: 0277-786X/19/\$21 · doi: 10.1117/12.2551338

Proc. of SPIE Vol. 11090 1109001-1

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIEDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

**SPIE. DIGITAL
LIBRARY**
SPIEDigitalLibrary.org

Paper Numbering: *Proceedings of SPIE* follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

vii	<i>Authors</i>

xiii	<i>Introduction</i>

SPIN CALORITRONICS

11090 0U	Non-equilibrium thermodynamics of spin-caloritronic effects [11090-30]
----------	---

THZ SPINTRONICS

11090 13	Terahertz emission from magnetic thin film and patterned heterostructures [11090-39]
----------	---

SPIN-ORBIT COUPLING

11090 1X	Spin-orbit coupling in the hydrogen atom, the Thomas precession, and the exact solution of Dirac's equation [11090-68]
----------	---

MAGNONICS

11090 25	Visualizing nanoscale spin waves using MAXYMUS [11090-76]
----------	--

GRAPHENE AND TRANSITION-METAL DICHALCOGENIDES

11090 2F	Tunable Berry curvature, valley and spin Hall effect in Bilayer Mos2 [11090-86]
----------	--

SPIN-HALL EFFECT II

11090 33	Spin transport and spin-charge interconversion phenomena in Ge-based structures [11090-111]
----------	--

SPIN LASERS

- 11090 36 **Spin polarization modulation of 1.55- μ m VCSELs for high-speed data communications**
[11090-114]
- 11090 39 **Optical isolation in magnetoplasmonic diffraction gratings** [11090-117]

DEVICES AND SENSORS I

- 11090 3F **Magnetic field-free deterministic switching of a perpendicular magnetic layer by spin-orbit torques** [11090-123]
- 11090 3H **Recent progress in the development of high-sensitivity tunneling magnetoresistive sensors**
[11090-125]

NEUROMORPHIC COMPUTING II

- 11090 3I **Semi-supervised learning and inference in domain-wall magnetic tunnel junction (DW-MTJ) neural networks** [11090-126]
- 11090 3J **A complete set of spintronic hardware building blocks for low power, small footprint, high performance neuromorphic architectures** [11090-127]
- 11090 3K **Magnetic domain wall neuron with intrinsic leaking and lateral inhibition capability** [11090-128]
- 11090 3L **Neuro-inspired computing with emerging memories: where device physics meets learning algorithms** [11090-129]

DEVICES AND SENSORS II

- 11090 3M **Spintronic sensors for NMR and MRI** [11090-131]

SUPERCONDUCTIVITY II

- 11090 3Z **Investigation of InAs-based devices for topological applications** [11090-144]

POSTER SESSION

- 11090 45 **Spin based neuromorphic computing** [11090-130]

11090 46

Density functional theory study of magnetic and structural properties of deoxyhemoglobin and aquomethemoglobin for use in MRI [11090-150]

Authors

Numbers in the index correspond to the last two digits of the seven-digit citation identifier (CID) article numbering system used in Proceedings of SPIE. The first five digits reflect the volume number. Base 36 numbering is employed for the last two digits and indicates the order of articles within the volume. Numbers start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B...0Z, followed by 10-1Z, 20-2Z, etc.

Introduction

The twelfth edition of the Spintronics conference gathered about one hundred and fifty speakers in San Diego, California (United States) from Sunday 11 August to Thursday 15 August 2019.

In line with the previous editions, Spintronics XII, held in the framework of the SPIE Nanoscience + Engineering 2019 symposium, covered very hot topics in Spintronics. The conference was an invaluable opportunity for informal and stimulating discussions between experts as well as for networking in a friendly atmosphere, testifying to the vitality of our field of research.

Featuring 36 oral sessions, the symposium gave a broad and timely snapshot of the active and emerging fields in spintronics and spinorbitronics. Recent results at the forefront of theoretical, experimental, and technological developments were discussed. An important place was reserved for *Spin Hall Effect* and for *Devices and Sensors*, with three focused sessions, as well as to *Antiferromagnetic Spintronics*, *Skyrmions*, *Topological Insulators*, *Superconductivity*, *Spin-Orbit Torque*, *Graphene and Transition-Metal Dichalcogenides*, and *Neuromorphic Computation* with two focused sessions.

Special attention was paid to *Semiconductor Spintronics*, *Quantum Wells*, *Quantum Dots*, and *2DEGs*, *Organic Spintronics*, *New Materials for Spintronics*, *Spin Caloritronics*, *Spin Pumping and Plasmonics*, *Magnonics*, *Spin-Transfer and ST Oscillators*, *Spin-Orbit Coupling*, *Micromagnetism and Spin Systems*, *Ultrafast Phenomena*, *Spin Coherence and Quantum Effects*. Emphasis was also put on *Spin Acoustics*, *THz Spintronics*, *Spin Lasers*, and *Majorana Fermions*.

Finally, we are grateful to the SPIE staff and to the Program Committee members for their tremendous work. We give special thanks to all colleagues and friends who helped organize successful focused sessions. We warmly thank all the authors and speakers for their active participation. They have made this conference a great success.
