Proc. of SPIE Vol. 11113 1111301-1

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Publication of record for individual papers is online in the SPIE Digital Library.

**SPIE. DIGITAL
LIBRARY**

SPIDigitalLibrary.org

Paper Numbering: *Proceedings of SPIE* follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

vii	<i>Authors</i>
xi	<i>Conference Committee</i>
xiii	<i>Introduction</i>

SESSION 1 APPLICATIONS I: BRAIN TO BONE

11113 02	Recent trends in high-resolution hard x-ray tomography [11113-1]
11113 04	Nanoscale x-ray holo-tomography of human brain tissue with phase retrieval based on multi-photon energy recordings [11113-3]
11113 06	Correlative 3D anatomy and spatial chemistry in animal-microbe symbioses: developing sample preparation for phase-contrast synchrotron radiation based micro-computed tomography and mass spectrometry imaging (Invited Paper) [11113-5]

SESSION 2 ALGORITHMS I: IMAGE ARTEFACT REDUCTION

11113 08	Correction of phase wrapping artifacts in grating-based hard x-ray tomography [11113-7]
11113 09	Regression-based sinogram replacement for CT metal artifact reduction [11113-8]
11113 0A	Metal artifact reduction in CT using fault-tolerant image reconstruction [11113-9]
11113 0B	Resolution-invariant measurements of small objects in polychromatic CT data (Invited Paper) [11113-51]

SESSION 3 INSTRUMENTATION I: NEXT-GENERATION PROTOTYPES

11113 0C	MARS pre-clinical imaging: the benefits of small pixels and good energy data (Invited Paper) [11113-10]
----------	--

SESSION 4 INSTRUMENTATION II: PHASE TOMOGRAPHY

- 11113 OG **In vivo x-ray imaging of the respiratory system using synchrotron sources and a compact light source (Invited Paper)** [11113-14]
- 11113 OH **Systematic analysis of microstructured array anode target for hard x-ray grating interferometer** [11113-15]
- 11113 OI **Four-dimensional pink-beam x-ray phase tomography for studying laser processing** [11113-16]
- 11113 OJ **Development of laboratory-based x-ray phase tomographic microscope (Invited Paper)** [11113-17]

SESSION 5 INSTRUMENTATION III: AUGMENTING CONTRAST

- 11113 OM **Dose and spatial resolution analysis of grating-based phase-contrast mammography using an inverse Compton x-ray source** [11113-20]
- 11113 ON **Evaluation of different heavy-metal stains and embedding media for phase contrast tomography of neuronal tissue** [11113-21]
- 11113 OO **New staining tools and developments for 3D soft tissue CT imaging (Invited Paper)** [11113-22]
- 11113 OP **Fast multi-scale imaging using the Beamline I13L at the Diamond Light Source** [11113-68]

SESSION 6 APPLICATIONS II: MEDICALLY RELEVANT IMAGING

- 11113 OQ **Evaluation of metal nanoparticle- and plastic resin-based x-ray contrast agents for kidney capillary imaging (Invited Paper)** [11113-23]
- 11113 OR **Single-energy material decomposition with grating-based x-ray phase-contrast CT** [11113-24]
- 11113 OS **Fiber orientation in a whole mouse heart reconstructed by laboratory phase-contrast micro-CT** [11113-25]

SESSION 7 ALGORITHMS II: COMPRESSED SENSING AND DEEP LEARNING

- 11113 OU **Advanced compressed sensing image reconstruction for interior tomography (Invited Paper)** [11113-27]
- 11113 OV **Dual network architecture for few-view CT: trained on ImageNet data and transferred for medical imaging** [11113-28]
- 11113 OW **Quadratic neural networks for CT metal artifact reduction** [11113-29]

11113 0X **Super-resolution MRI and CT through GAN-CIRCLE** [11113-30]

SESSION 8 APPLICATIONS III: 4D IMAGING

11113 0Z **Development of grating interferometer-based stroboscopic x-ray tomography** [11113-32]

SESSION 9 APPLICATIONS IV: HARD AND UNIQUE OBJECTS

11113 12 **In situ position-resolved x-ray diffraction of an intact Roman-era Egyptian mummy guided by computed tomography (Invited Paper)** [11113-35]

11113 13 **Observations on the scaling relationship between bony labyrinth, skull size and body mass in ruminants** [11113-36]

11113 14 **Three-dimensional characterization of soft silicone elements for intraoral device** [11113-37]

11113 15 **Time-lapse x-ray microtomography for detecting small changes in local mineral concentration** [11113-38]

11113 16 **The osteocyte lacuno-canalicular network in bone investigated by synchrotron radiation-based techniques (Invited Paper)** [11113-39]

SESSION 10 INSTRUMENTATION IV: SR-BASED TOMOGRAPHY

11113 17 **An example of in situ ductile damage analysis by tracking algorithm (Invited Paper)** [11113-40]

11113 18 **A load frame for in situ tomography at PETRA III** [11113-41]

11113 19 **Development of synchrotron pink beam x-ray grating interferometer at the Diamond Light Source I13-2 beamline** [11113-42]

11113 1A **Optimization of high-energy microtomography using synchrotron radiation at PETRA III** [11113-43]

SESSION 11 INSTRUMENTATION V: SYSTEM ENHANCEMENT

11113 1B **Focused x-ray luminescence computed tomography (Invited Paper)** [11113-44]

11113 1D **Assessment of metal implant induced artefacts using photon counting spectral CT** [11113-46]

SESSION 12 ALGORITHMS III: FEATURE EXTRACTION

- 11113 1F **Low-dose CT simulation with a generative adversarial network** [11113-48]
- 11113 1G **Building towards a universal neural network to segment large materials science imaging datasets** [11113-49]
- 11113 1H **Compressive x-ray material decomposition using structured illumination** [11113-50]
- 11113 1I **Preprocessing techniques for removing artifacts in synchrotron-based tomographic images (Invited Paper)** [11113-6]

POSTER SESSION

- 11113 1K **Image reconstruction in sparse-view CT using improved nonlocal total variation regularization (Best Student Poster Award)** [11113-53]
- 11113 1L **Deep-learning-based breast CT for radiation dose reduction** [11113-54]
- 11113 1M **Smoothing L_0 - and L_1 -norm regularizers and their relations to non-local means for CT reconstruction** [11113-55]
- 11113 1N **Cone-beam computed tomography: magnetic resonance imaging registration in dento-maxillary imaging** [11113-56]
- 11113 1P **Training artificial neurons: an introduction to machine learning** [11113-58]
- 11113 1Q **Comparing the accuracy of intraoral scanners, using advanced micro computed tomography** [11113-59]
- 11113 1R **Machine learning assisted interior phase-contrast CT** [11113-60]
- 11113 1S **Deformable and reconfigurable mouse phantoms with 3D printing and LTS technologies** [11113-61]
- 11113 1T **Deep learning based CT thermometry for thermal tumor ablation** [11113-62]
- 11113 1U **Effect of tube setting variables on image quality in industrial x-ray computed tomography** [11113-63]
- 11113 1W **Low-dose CT via deep CNN with skip connection and network-in-network** [11113-65]
- 11113 1X **High-fidelity geometry generation from CT data using convolutional neural networks** [11113-67]

Authors

Numbers in the index correspond to the last two digits of the seven-digit citation identifier (CID) article numbering system used in Proceedings of SPIE. The first five digits reflect the volume number. Base 36 numbering is employed for the last two digits and indicates the order of articles within the volume. Numbers start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B...0Z, followed by 10-1Z, 20-2Z, etc.

Conference Committee

Program Track Chairs

Ali M. Khounsary, Illinois Institute of Technology (United States)
Ralph B. James, Savannah River National Laboratory (United States)

Conference Chairs

Bert Müller, Universität Basel (Switzerland)
Ge Wang, Rensselaer Polytechnic Institute (United States)

Conference Program Committee

Felix Beckmann, Helmholtz-Zentrum Geesthacht (Germany)
Graham R. Davis, Queen Mary, University of London
(United Kingdom)
Francesco De Carlo, Argonne National Laboratory (United States)
Julia Herzen, Technische Universität München (Germany)
Atsushi Momose, Tohoku University (Japan)
Françoise Peyrin, Center de Recherche en Acquisition et Traitement
d'images pour la Santé (France)
Stuart R. Stock, Northwestern University (United States)

Session Chairs

- 1 Applications I: Brain to Bone
Stuart R. Stock, Northwestern University (United States)
- 2 Algorithms I: Image Artefact Reduction
Ge Wang, Rensselaer Polytechnic Institute (United States)
- 3 Instrumentation I: Next-Generation Prototypes
Francesco De Carlo, Argonne National Laboratory (United States)
- 4 Instrumentation II: Phase Tomography
Felix Beckmann, Helmholtz-Zentrum Geesthacht (Germany)
- 5 Instrumentation III: Augmenting Contrast
Graham R. Davis, Queen Mary University of London (United Kingdom)
- 6 Applications II: Medically Relevant Imaging
Hans Herts, KTH Royal Institute of Technology (Sweden)

- 7 Algorithms II: Compressed Sensing and Deep Learning
Atsushi Momose, Tohoku University (Japan)
- 8 Applications III: 4D Imaging
Anna-Lena Robisch, Georg-August-Universität Göttingen (Germany)
- 9 Applications IV: Hard and Unique Objects
Julia Herzen, Technische Universität München (Germany)
- 10 Instrumentation IV: SR-based Tomography
Kaye Morgan, Monash University (Australia)
- 11 Instrumentation V: System Enhancement
Seemeen Karimi, Elimu Informatics Inc. (United States)
- 12 Algorithms III: Feature Extraction
Bert Müller, Universität Basel (Switzerland)

Introduction

This year in San Diego, California, we held the twelfth SPIE conference on *Developments in X-ray Tomography*. A tradition in the interdisciplinary field of x-ray tomography is to exchange ideas and facilitate collaboration on instrumentation, algorithms, and a wide variety of applications enabled by tomographic characterization using x-rays. We acknowledge the submission of about 70 papers of decent quality and appreciate remarkable efforts by the Program Committee members: F. Beckmann, G. R. Davis, F. de Carlo, J. Herzen, A. Momose, F. Peyrin, and S. R. Stock. (See Figure 1.)

Figure 1. Committee members at the SPIE dinner meeting (left to right): Felix Beckmann, Graham R. Davis, Bert Müller, Francesco de Carlo, Atsushi Momose, Julia Herzen, Stuart R. Stock, and Ge Wang.

The conference was organized in three domains: Algorithms I-III, Applications I-IV, and Instrumentation I-V. The instrumentation topics included liquid-metal and compact light sources, next-generation systems, grating-based phase tomography, synchrotron radiation-based tomography, and system enhancement. The algorithms were presented for image-artefact and noise reduction, compressed sensing and deep-learning-based image reconstruction, and feature extraction. Applications ranged from bone to brain, medically relevant imaging, fast tomographic imaging, and studies on unique objects. The multidisciplinary flavor was evident as oral presentations and posters were introduced through collaboration among physicists, engineers, and biomedical experts. A special mention was given to the posters by two high-school interns, both as first author.

The *Developments in X-ray Tomography* conference series always welcomes PhD students and encourages postdoctoral fellows. In order to promote their career development, the best poster presented by a PhD student as the first author was

awarded with a cash contribution and sponsored by Sigray, Inc. (United States) (<http://www.sigray.com>). The winner of the outstanding poster award for this year was Yongchae Kim from H. Kudo's group for the work on image reconstruction in a sparse-view CT setting using nonlocal TV regularization. (See Figure 2.)

Figure 2. Photograph of the award-winning poster by Yongchae Kim, a student supervised by Hiroyuki Kudo at the University of Tsukuba, Japan.

In addition to the Best Student Poster Award, we have also created the Best Presentation Award (postdoctoral fellow or equivalent as the first author and presenter) and the Best Paper Award (for any paper, oral or poster). For the best presentation award and the best paper award, all authors are qualified excluding Chairs. For either award, we asked interested and qualified participants to submit an application package, including a 300-word summary of the paper, the applicant's CV, and for the best presentation award their presentation file and the advisor's letter of support with confirmation that the first author and presenter is a postdoc or equivalent. The selection process is managed by the Chairs and aided by the committee members.

The awardee of best presentation was Marius Reichardt, who gave an impressive talk on the fiber orientation in an entire mouse heart starting from the oriented nanostructures investigated using the nanotomography setup at the beamline P10, PETRA III, located in Hamburg, Germany. He presented the results of laboratory phase-contrast micro-CT based on liquid metal source.

Anna-Lena Robisch, who is also a member of the Institute of X-ray Physics at the Georg-August-University in Göttingen, Germany, has been honored for the best paper (1111304) entitled "Nanoscale x-ray holo-tomography of human brain tissue with phase retrieval based on multi-photon energy recordings." This contribution perfectly combined theory, simulations and experiments. The data acquired at the high-end GINIX-setup of beamline P10 at DESY, Hamburg, Germany, are an important contribution to nascent non-destructive histopathology in three-dimensional space.

To facilitate the growth of our SPIE x-ray tomography community, we encourage you to get connected to our LinkedIn group at <https://www.linkedin.com/groups/12293644>. It is up to us to enrich the functionalities of this web resource for our research, development, and applications.

We look forward to seeing you at the next conference in 2021.
