Proceedings of SPIE 0277-786X, V. 11129

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

Infrared Sensors, Devices, and Applications IX, edited by Paul D. LeVan,
Priyalal Wijewarnasuriya, Ashok K. Sood, Proc. of SPIE Vol. 11129, 1112901
© 2019 SPIE · CCC code: 0277-786X/19/\$18 · doi: 10.1117/12.2551562

Proc. of SPIE Vol. 11129 1112901-1

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

SPIE. DIGITAL LIBRARY
SPIDigitalLibrary.org

Paper Numbering: *Proceedings of SPIE* follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

v	<i>Authors</i>
vii	<i>Conference Committee</i>
ix	<i>Introduction</i>

NOVEL DETECTOR CONCEPTS AND THEORY

11129 02	Microscopic transport model for impurity scattering in two-dimensional novel α-T₃ materials [11129-1]
11129 03	A dual-band HgCdTe nBn infrared detector design [11129-2]
11129 04	Polycrystalline (Sb,Bi)₂Se₃ thin film layers for SWIR detection [11129-3]
11129 05	Temperature-dependent minority carrier lifetime in InAsSb nBn detectors on alternative substrates [11129-4]
11129 06	Development of high-performance graphene-HgCdTe detector technology for mid-wave infrared applications [11129-5]

DISCRETE DETECTORS AND DIAGNOSTICS

11129 07	A light compact and rugged IR sensor for space applications [11129-6]
11129 08	A real-time SWIR- image-based gas leak detection and localization system [11129-32]

IMAGING FOCAL PLANE ARRAYS

11129 0C	T2SL meta-surfaced digital focal plane arrays for Earth remote sensing applications (Invited Paper) [11129-9]
11129 0D	Low dark current diffusion limited planar type InGaAs photodetectors [11129-10]
11129 0E	Recent progress in extended wavelength InGaAs photodetectors and comparison with SWIR HgCdTe photodetectors [11129-11]
11129 0F	GaN/AlGaIn avalanche photodiode detectors for high performance ultraviolet sensing applications [11129-13]

EO-IR COMPONENTS AND COMMERCIAL APPLICATIONS

- 11129 OG **High sensitivity infrared thermometry for precise temperature control in domestic induction cooktops** [11129-14]
- 11129 OH **Germanium window with highly durable diamond-like carbon coating for infrared camera of automobile** [11129-15]
- 11129 OI **Development of nanostructured antireflection coatings for infrared sensing applications** [11129-16]

LASER RADAR AND FIBER TECHNOLOGIES

- 11129 OL **Space qualification of 5 to 8 GHz bandwidth, uncooled, extended InGaAs 2.2 micron wavelength, linear optical receivers** [11129-21]
- 11129 OM **Curvature and sensitivity enhanced temperature polymer-coated multimode interference sensor** [11129-22]

POSTER SESSION

- 11129 OQ **Parametric modeling of NIR and SWIR absorbance spectra for dye mixtures in fabrics using Gaussian functions** [11129-26]
- 11129 OU **Error correction model based on echo light intensity in pulse laser ranging system** [11129-30]

Authors

Numbers in the index correspond to the last two digits of the seven-digit citation identifier (CID) article numbering system used in Proceedings of SPIE. The first five digits reflect the volume number. Base 36 numbering is employed for the last two digits and indicates the order of articles within the volume. Numbers start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B...0Z, followed by 10-1Z, 20-2Z, etc.

Conference Committee

Program Track Chair

Allen H.-L. Huang, University of Wisconsin-Madison (United States)

Conference Chairs

Paul D. LeVan, Air Force Research Laboratory (United States)

Priyalal Wijewarnasuriya, Teledyne Imaging Sensors (United States)

Ashok K. Sood, Magnolia Optical Technologies, Inc. (United States)

Conference Program Committee

Sachidananda R. Babu, NASA Earth Science Technology Office
(United States)

Enrico Bellotti, Boston University (United States)

Vincent M. Cowan, Air Force Research Laboratory (United States)

Eustace L. Dereniak, James C. Wyant College of Optical Sciences
(United States)

Nibir K. Dhar, U.S. Army Night Vision & Electronic Sensors Directorate
(United States)

Arvind I. D'Souza, DRS Advanced ISR (United States)

Sarath D. Gunapala, Jet Propulsion Laboratory (United States)

Jay S. Lewis, Defense Advanced Research Projects Agency
(United States)

Hooman Mohseni, Northwestern University (United States)

Hiroshi Murakami, Japan Aerospace Exploration Agency (Japan)

Ünal Sakoglu, University of Houston-Clear Lake (United States)

Session Chairs

1 Novel Detector Concepts and Theory
Priyalal Wijewarnasuriya, Teledyne Imaging Sensors (United States)

2 Discrete Detectors and Diagnostics
Ashok K. Sood, Magnolia Optical Technologies, Inc. (United States)

3 Imaging Focal Plane Arrays
Paul D. LeVan, Air Force Research Laboratory (United States)

4 EO-IR Components and Commercial Applications
Priyalal Wijewarnasuriya, Teledyne Imaging Sensors (United States)

- 5 Medical and Commercial Applications of EO-IR Sensing
Ashok K. Sood, Magnolia Optical Technologies, Inc. (United States)
- 6 Laser Radar and Fiber Technologies
Paul D. LeVan, Air Force Research Laboratory (United States)

Introduction

This proceedings volume is a collection of papers of invited and contributed presentations at Infrared Sensors, Devices, and Applications X, held on 14-15 August 2019 at the San Diego Convention Center as part of SPIE Optics + Photonics 2019.

The Infrared Sensors, Devices, and Applications conference has roots going back several decades, to when the SPIE San Diego conference venue was the Town and Country Hotel. Major breakthroughs in cryogenically-cooled semiconductor detector technology go back to the decades following its inception. This marks the tenth year of the Infrared Sensors, Devices, and Applications conference in its present form, as revamped by an earlier conference committee under Dr. Dereniak's leadership. The scope of the conference has since been extended to include numerous applications of infrared for medical diagnostics, as well as structural health monitoring, remote sensing, surveillance, and a variety of other civil and military applications.

Infrared Sensors, Devices, and Applications X proved to be an interesting conference this year. A total of 20 papers (including one invited presentation and several posters) were presented on a variety of interesting topics. Highlights run the gamut and include presentations on a novel delta-doped nBn (n-type, Barrier, n-type semiconductor architecture) approach that emphasized growth architectures that maintain strong conduction band blocking efficiency for higher levels of sensitivity. Our invited presentation described new goals for strained layer superlattice sensor arrays that will result in higher operating temperature to accommodate small satellite flight opportunities. The conference was well attended, and the inevitable last-minute cancellations were accommodated without excessive disruption to the overall conference flow.

The manuscripts included in this proceedings volume cover wide-ranging achievements in the current fields of both infrared technologies and the widespread employment of the infrared for a range of applications. We hope that readers find these proceedings stimulating, as well as helpful for their future research and development endeavors.

We look forward to continuing Infrared Sensors, Devices, and Applications as part of SPIE Optics + Photonics 2020. To keep this conference topical and the levels of interest high, we are developing a new session for 2020 on the potential of infrared technology to ameliorate global climate change.

Finally, we would like to express our sincere gratitude to the committee members and all of the presenters and attendees of the conference, as well as to the SPIE staff for their contributions.

Paul “Wije” Ashok
