Proceedings of SPIE 0277-786X, V. 11144

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

Photonics and Education in Measurement Science 2019, edited by Maik Rosenberger,
Paul-Gerald Dittrich, Bernhard Zagar, Proc. of SPIE Vol. 11144, 1114401
© 2019 SPIE · CCC code: 0277-786X/19/\$21 · doi: 10.1117/12.2549081

Proc. of SPIE Vol. 11144 1114401-1

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Paper Numbering: *Proceedings of SPIE* follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

vii	<i>Authors</i>
ix	<i>Conference Committee</i>
xi	<i>Introduction</i>

SESSION 1

11144 03	Multimodal sensor: high-speed 3D and thermal measurement [11144-40]
11144 04	Smart multispectral image acquisition and multi-channel image processing with programmable system on chip devices [11144-16]
11144 05	Sensitivity-enhanced fiber interferometric high temperature sensor based on Vernier effect [11144-17]
11144 06	Laboratory exercise of digital measurement system based on Modbus protocol used for indoor environment monitoring [11144-3]
11144 07	Measurement accuracy and dependence on external influences of the iPhone X TrueDepth sensor [11144-7]
11144 08	Supercontinuum white light lasers: a review on technology and applications [11144-49]

SESSION 2

11144 09	Quantification and classification in process analytics using hyperspectral imaging [11144-59]
11144 0A	Principle investigations on polarization image sensors [11144-58]
11144 0B	SnapshotNIR: a handheld multispectral imaging system for tissue viability assessment [11144-60]
11144 0C	Remote-audit and VR support in precision and mechanical engineering [11144-48]
11144 0D	Modelling and calibration of multi-camera-systems for 3D industrial supervision applications [11144-43]
11144 0E	How to support interest in engineering in secondary education [11144-4]

SESSION 3

- 11144 OF **Three-dimensional THT solder joint reconstruction for inline inspection systems** [11144-25]
- 11144 OG **Scattering light in bearing production: roundness, waviness, roughness in one operation** [11144-31]
- 11144 OH **Inline thickness measurement with imaging ellipsometry** [11144-36]
- 11144 OI **A high sensitivity fiber Bragg grating seismic sensor system for intrusion detection** [11144-47]
- 11144 OJ **Physically based synthetic image generation for machine learning: a review of pertinent literature** [11144-51]
- 11144 OK **F0-Lab: the simple tool for laboratory experiments in measurement and instrumentation** [11144-8]

SESSION 4

- 11144 OL **Scene based camera pose estimation in Manhattan worlds** [11144-19]
- 11144 OM **Feature detection in unorganized pointclouds** [11144-15]
- 11144 ON **Magnetic-fluid-based photonic crystal fiber for temperature sensing** [11144-22]
- 11144 OO **Simulation-based investigation on optical 3D surface measurement with composite spectral patterns** [11144-27]
- 11144 OP **Spectral near field data of LED systems for optical simulations** [11144-29]
- 11144 OQ **Implementation of a multiview passive-stereo-imaging system with SoC technology** [11144-12]

SESSION 5

- 11144 OR **Comparison of the performance of innovative deep learning and classical methods of machine learning to solve industrial recognition tasks** [11144-26]
- 11144 OS **Measurement principle and arrangement for the determination of spectral channel-specific angle dependencies for multispectral resolving filter-on-chip CMOS cameras** [11144-2]
- 11144 OT **Automatic crack detection on concrete floor images** [11144-41]
- 11144 OU **Characterization of optical spectrum in laser beam welding of dissimilar aluminum-copper joints and time-dependent correlation to process stages** [11144-50]

- 11144 OV **System calibration and characterization of an ultra-compact multispectral snapshot imaging system [11144-42]**

SESSION 6

- 11144 OW **A fiber optic ultrasonic sensing system for 2D temperature field monitoring using optically generated acoustic waves [11144-28]**
- 11144 OX **Optical analysis of magnetic microstructures [11144-14]**
- 11144 OY **Data fusion of multi-spectral cameras on a low-power processing platform for self-sufficient outdoor operation [11144-30]**
- 11144 OZ **A development overview of a signal flow model for spectral data with a final assessment under a practical point of view [11144-38]**
- 11144 10 **Introducing uncertainty of complex-valued quantities in measurement science education [11144-35]**

SESSION 7

- 11144 11 **Application of DOE in confocal microscopy for surface measurement [11144-33]**
- 11144 12 **LumiScan technology for automation and quality inspection [11144-62]**

POSTER SESSION

- 11144 13 **Preparatory course "Practical electronics" focused on measurement and instrumentation [11144-5]**
- 11144 14 **Efficient 3D object tracking approach based on convolutional neural network and Monte Carlo algorithms used for a pick and place robot [11144-6]**
- 11144 15 **The new subject at the Czech Technical University in Prague: laboratories of industrial electronics and sensors [11144-10]**
- 11144 16 **FPGA-based lens undistortion and image rectification for stereo vision applications [11144-11]**
- 11144 17 **Highly sensitive carbon monoxide sensor for coal mine combustion monitoring [11144-20]**
- 11144 18 **Response time analysis of hot-wire-based gas velocity sensor using optical fiber [11144-34]**
- 11144 19 **Spectrum detection of multichannel miniature spectrometer on matrix-sensor [11144-37]**

- 11144 1A **Portability of the fragmented l1-norm transform for massively parallel processing [11144-39]**
- 11144 1B **Simplified Stokes polarimeter based on division-of-amplitude [11144-44]**
- 11144 1C **Production of a favorable calibration target for the determination of distortions of lenses in image processing [11144-45]**
- 11144 1D **Requirements for web-based integrated management systems in the production of image processing components [11144-46]**
- 11144 1E **The perspective of optical measurement methods in forestry [11144-52]**

Authors

Numbers in the index correspond to the last two digits of the seven-digit citation identifier (CID) article numbering system used in Proceedings of SPIE. The first five digits reflect the volume number. Base 36 numbering is employed for the last two digits and indicates the order of articles within the volume. Numbers start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B...0Z, followed by 10-1Z, 20-2Z, etc.

Introduction

The Joint TC1 - TC2 International Symposium on Photonics and Education in Measurement Science, which takes place 17–19 September 2019 in collaboration with the Conference on Optical Fibre & Photonic Sensors for Industrial & Safety Applications (OFSIS), addresses recent research and developments in photonic instrumentation and applications as well as education and training in measurement sciences.

The conference focuses on the theme, “Photonics and Education in Measurement Science,” and provides a forum for the exchange of the latest research findings and innovations related to this theme. Topics include, but are not limited to, the following:

- Measurement, Instrumentation, and Photonics for Education & Training
- Applied Photonics for Science and Engineering in Industry, Biology, Medicine, Environment, and Administration
- Sensor & System Characterization for Machine Vision and Image Processing
- Photonic Sensors and Systems for Multimodal Sensing
- Photonics, Machine Vision, and Image Processing in UV, VIS, NIR, SWIR, and LWIR Wavelength Range including Thermal and THz
- Software & Processing of Multivariate and Multidimensional Data as well as Deep Learning Approaches
- Development of Models, Methods, and Algorithms in Photonics, Machine Vision, and Image Processing.

Well-known experts from leading research facilities, companies, and institutions will give insights on their latest research and developments in photonic measurement engineering for quality assurance.

This conference is where scientists and innovators meet to share, inspire, and network. We are proud to host the Joint TC1 - TC2 International Symposium on Photonics and Education in Measurement Science 2019 in Jena, Germany. This year's schedule is packed with scientific keynotes and lectures about new technologies, methods, and applications as well as scientific tours, an exhibition of instruments, and solutions for photonic measurement sciences.

We are grateful to all the contributors who present their valuable work to the research and industry community. We sincerely wish you a very pleasant stay during the conference, and a nice trip home with plenty of pleasant memories of

this conference. We give our best regards to the participants of the conference.
Welcome to Germany! Welcome to Jena!
