Volume 11394

Proceedings of SPIE 0277-786X, V. 11394

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

Automatic Target Recognition XXX, edited by Riad I. Hammoud, Timothy L. Overman,
Abhijit Mahalanobis, Proc. of SPIE Vol. 11394, 1139401 · © 2020 SPIE
CCC code: 0277-786X/20/\$21 · doi: 10.1117/12.2572767

Proc. of SPIE Vol. 11394 1139401-1

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Paper Numbering: *Proceedings of SPIE* follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

AERIAL, REMOTE SENSING, AND SPACE-BASED ATR I

- 11394 03 **Deep learning based moving object detection for oblique images without future frames**
[11394-2]
- 11394 04 **Height-adaptive vehicle detection in aerial imagery using metadata of EO sensor** [11394-3]
- 11394 05 **Investigation of search strategies to identify optimized and efficient templates for automatic target recognition in remotely sensed imagery** [11394-4]

AERIAL, REMOTE SENSING, AND SPACE-BASED ATR II

- 11394 06 **Domain adversarial neural network-based oil palm detection using high-resolution satellite images** [11394-5]

COMPUTER VISION FOR ATR I

- 11394 0B **Target classification in infrared imagery by cross-spectral synthesis using GAN (Best Student Paper)** [11394-18]

ACTIVE SENSING (RF, LIDAR, AND ACOUSTIC)

- 11394 0G **Radar target recognition using structured sparse representation** [11394-19]
- 11394 0H **A comparison of template matching and deep learning for classification of occluded targets in LiDAR data** [11394-20]
- 11394 0I **Multi-feature optimization strategies for target classification using seismic and acoustic signatures** [11394-21]
- 11394 0J **Classifying WiFi “physical fingerprints” using complex deep learning** [11394-22]
- 11394 0K **Adversarial training on SAR images** [11394-23]

ATR ALGORITHMS I

- 11394 0O **Flexible deep transfer learning by separate feature embeddings and manifold alignment** [11394-27]
- 11394 0P **Training set effect on super resolution for automated target recognition** [11394-28]
- 11394 0Q **SAR automatic target recognition with less labels (Invited Paper)** [11394-29]

ATR ALGORITHMS II

- 11394 0R **Identifying unlabeled WiFi devices with zero-shot learning** [11394-30]
- 11394 0S **Adventures in deep learning geometry** [11394-31]
- 11394 0T **Do we miss targets when we capture hyperspectral images with compressive sensing? (Invited Paper)** [11394-46]
- 11394 0U **Image fusion for context-aided automatic target recognition (Invited Paper)** [11394-32]

PHENOMENOLOGY AND ANALYSIS

- 11394 0W **Robustness of adversarial camouflage (AC) for naval vessels** [11394-35]

MULTI SENSOR/MULTI SPECTRUM

- 11394 0Z **Combining visible and infrared spectrum imagery using machine learning for small unmanned aerial system detection (Best Student Paper)** [11394-10]
- 11394 10 **Evaluating the variance in convolutional neural network behavior stemming from randomness** [11394-11]
- 11394 11 **Network dynamics based sensor data processing** [11394-12]

TARGET DETECTION ALGORITHMS

- 11394 14 **Patch-based Gaussian mixture model for scene motion detection in the presence of atmospheric optical turbulence** [11394-43]
- 11394 15 **Real-time thermal infrared moving target detection and recognition using deep learned features** [11394-44]

- 11394 18 **How robust are deep object detectors to variability in ground truth bounding boxes?**
Experiments for target recognition in infrared imagery [11394-48]

ADDITIONAL PAPER

- 11394 1B **Methods for real-time optical location and tracking of unmanned aerial vehicles using digital
neural networks** [11394-50]
