Proceedings of SPIE 0277-786X, V. 11436

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

2019 International Conference on Optical Instruments and Technology: Optical Sensor and Applications,
edited by Xuping Zhang, Hai Xiao, Proc. of SPIE Vol. 11436, 1143601 · © 2020 SPIE
CCC code: 0277-786X/20/\$21 · doi: 10.1117/12.2566174

Proc. of SPIE Vol. 11436 1143601-1

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Paper Numbering: *Proceedings of SPIE* follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

OPTICAL SENSOR AND APPLICATIONS

11436 02	Variational mode decomposition-based endpoint detection for distributed fiber interferometric vibration sensing systems (Invited Paper) [11436-2]
11436 03	Performance enhancement for phase-sensitive OTDR based on multi-spatial resolution analysis (Invited Paper) [11436-3]
11436 04	A multiple events recognition scheme based on improved feature vectors for fiber optic perimeter security system [11436-4]
11436 05	Influence of wafer materials on the response speed of extrinsic optical fiber Fabry-Perot high temperature sensors (Invited Paper) [11436-6]
11436 06	Temperature accuracy enhanced dual-end distributed temperature sensor employing Rayleigh compensation algorithm [11436-9]
11436 07	An EMD-based filtering algorithm for the long period fiber grating sensing [11436-11]
11436 08	Analysis on the interpolation of the weighted mean temperature and evaluation of GPT2w model in coastal areas of China [11436-13]
11436 09	Application of spectral droplet analysis method in flammable liquids identification [11436-18]
11436 0A	Analysis the multiple-order coupling points in distributed polarization coupling measurement used graphical methods [11436-21]
11436 0B	Interferometric fiber optic surface plasmon resonance sensor for temperature and strain measurement [11436-25]
11436 0C	Ultra-high temperature fiber growth technology based on CO₂ laser-heated technology [11436-27]

- 11436 OD **Distributed optical fiber acoustic sensing method based on dual-chirped pulses and cross-correlation analysis** [11436-28]
- 11436 OE **Fabrication and sensing properties of fiber Mach-Zehnder sensor based on CO₂ laser fusion** [11436-30]
- 11436 OF **Reflectivity-tunable Bragg grating reflectors based on polarization-maintaining few-mode fibers** [11436-31]
- 11436 OG **A weak double-peak fiber Bragg grating temperature sensor** [11436-33]
- 11436 OH **The effect of metal layer microstructure on optical fiber SPR sensor: a simulation study** [11436-36]
- 11436 OI **PDMS-coated fiber optic interferometer based on no-core fiber for multi-parameter measurements** [11436-42]
- 11436 OJ **Signal-pump power matching in the forward pumped fiber Raman amplifier of the remote interferometric optical fiber sensing system with phase modulation** [11436-43]
- 11436 OK **Simultaneous generation of multi-frequency microwave signals based on four-wave mixing in semiconductor laser with external cavity (Invited Paper)** [11436-48]
- 11436 OL **Research on crack propagation identification of aluminum alloy based on micro-cavity array fiber** [11436-49]
- 11436 OM **Multispectral photoacoustic Doppler velocimetry with intensity modulated high repetition supercontinuum laser pulses** [11436-52]
- 11436 ON **Novel distributed fiber Raman sensor and its application (Invited Paper)** [11436-53]
- 11436 OO **High temperature calibration of Raman distributed sensor based on dynamic multi-segment fiber temperature** [11436-54]
- 11436 OP **Hybrid structured fiber-optic Fabry-Perot interferometer for simultaneous strain and temperature measurement base on phase demodulation** [11436-55]
- 11436 OQ **Distributed salinity sensor based on Brillouin dynamic grating (Invited Paper)** [11436-60]
- 11436 OR **Pedestrian detection and recognition using lidar for autonomous driving** [11436-64]
- 11436 OS **Optical fiber temperature and strain sensing system based on high accuracy time delay measurement** [11436-65]
- 11436 OT **Analysis method for the operation health of all-fiber optical current transformer** [11436-66]
- 11436 OU **Automatic segment assembly method of shield tunneling machine based on multiple optoelectronic sensors** [11436-68]
- 11436 OV **A transition edge sensor signal simulator to evaluate the performance of superconducting quantum interference device amplifier** [11436-73]

- 11436 OW **Multi-point sensor based on SMS fiber structure [11436-74]**
- 11436 OX **Modeling method and discriminant criterion for single-particle image [11436-75]**
- 11436 OY **Pattern recognition of fiber disturbance based on support vector machine in polarization optical time domain reflectometry [11436-79]**
- 11436 OZ **Birefringence and polarization properties of a spun fiber around conductor with electrical currents [11436-80]**
- 11436 10 **Differential evolution algorithms for grating parameters and spatial stress decoupling of phase-shifted fiber Bragg grating [11436-81]**
- 11436 11 **Application of plasma absorption method in transient radiation-induced loss analysis of optical fibers [11436-82]**
- 11436 12 **Refractive index sensitivity of zinc oxide-coated long period fiber grating inscribed in a two-mode fiber [11436-201]**

Authors

Numbers in the index correspond to the last two digits of the seven-digit citation identifier (CID) article numbering system used in Proceedings of SPIE. The first five digits reflect the volume number. Base 36 numbering is employed for the last two digits and indicates the order of articles within the volume. Numbers start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B...0Z, followed by 10-1Z, 20-2Z, etc.

- 4 Microstructure Sensors
Wei Jiang, Nanjing University (China)
Xinyong Dong, China Jiliang University (China)
- 5 Microstructure Sensors
Hongbao Xin, Jinan University (China)
Feng Wang, Nanjing University (China)

Introduction

With distinct advantages such as high precision, fast response, immunity to electromagnetic interference and remote operation capability, optical sensors have traditionally been viewed as a high-end solution to many scientific and engineering problems that demand great performance. Fortunately, over the past decades, the rapid advancements in optical communications have brought to the market low cost semiconductor lasers, photo detectors, optical fibers, and integrated optical components, which pave the way for optical sensors to enter our daily lives and land on factory floors.

Optical sensors are now being used for measurement of various physical, chemical and biological parameters, providing great solutions for a wide variety of sensing needs that are difficult to handle by other types of sensors. New optical sensing devices, configurations and systems are being proposed, developed, tested and deployed at an unprecedented pace. Since 2017, scientists, researchers and engineers around the world gathered in Beijing, China to present their latest research work in the Optical Sensor and Applications Conference, as a part of the OIT Symposium.

In 2019, 37 papers have been accepted and presented (oral and poster) at the conference, covering many research fields and with a special focus on distributed and quasi-distributed optical fiber sensors. During the conference, we shared the latest accomplishments, sparked ideas, envisioned next-generation technologies, challenged ourselves, and cherished friendships.

The chairs of the OIT 2019—Optical Sensor and Applications Conference would like to thank our committee members, reviewers, authors and participants for their contributions and support that made the conference a great success. We are also grateful to the staff of SPIE for their support in publishing this volume in the Proceedings of SPIE.
