Proc. of SPIE Vol. 11462 1146201-1

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIEDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Plasmonics: Design, Materials, Fabrication, Characterization, and Applications XVIII*, edited by Din Ping Tsai, Takuo Tanaka, Proceedings of SPIE Vol. 11462 (SPIE, Bellingham, WA, 2020) Seven-digit Article CID Number.

Paper Numbering: *Proceedings of SPIE* follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

v *Introduction*

PLASMONIC/NANOPHOTONIC DEVICES I

11462 0F **Reduction of plasmon linewidth in dispersive absorbing media** [11462-13]

EMITTING DEVICES

11462 0M **Fast modulation and polarization control of infrared emission by incandescent metasurfaces (Invited Paper)** [11462-20]

11462 0N **Enhancement of exciton emission in a semiconductor thin film decorated with plasmonic nanoparticles** [11462-21]

FUNDAMENTALS OF PLASMONICS I

11462 0V **Scattering electromagnetic eigenstates of a two-constituent composite where both the electric permittivity and the magnetic permeability are nonuniform (Invited Paper)** [11462-29]

11462 0W **Electromagnetic radiation and the self torque of an oscillating magnetic dipole (Invited Paper)** [11462-30]

METASURFACES

11462 19 **Meta-structure assisted plasmonic nano-tweezers (Invited Paper)** [11462-43]

FUNDAMENTALS OF PLASMONICS II

11462 1C **Machine learning for the design of nanomaterials (Invited Paper)** [11462-46]

PLASMONIC SENSING II

- 11462 1Q **Application of self-assembled plasmonic structures for microfluidic control and sensing (Invited Paper)** [11462-60]
- 11462 1R **Limits to surface-enhanced Raman scattering near arbitrary-shape scatterers** [11462-61]

FUNDAMENTALS OF PLASMONICS III

- 11462 1W **Modes interplay controls the second harmonic generation dynamics of plasmonic nanostructures** [11462-65]

POSTER SESSION

- 11462 1Y **Surface plasmon-polariton waves obliquely guided along interface containing periodicity direction of one-dimensional photonic crystal** [11462-67]
- 11462 20 **Synthesis and nonlinear optical properties of bimetallic nanoparticles** [11462-69]
- 11462 21 **Stimulated Raman and Brillouin scattering on a plasma layer and bodies with complex shape** [11462-70]
- 11462 22 **Design and testing of ultrafast plasmonic lens nanoemitters** [11462-71]
- 11462 23 **Current-driven optical response of plasmonic crystal: From dissipation to amplification** [11462-72]
- 11462 2A **Near-infrared high sensitivity solute concentration sensor based on lossy-mode resonance of multimode fiber structures coated with aluminum-doped zinc oxide** [11462-79]
- 11462 2B **Plasmonically enhanced photobrightening using quantum dots** [11462-80]
- 11462 2M **Modeling and simulation of evanescent coupling to Si waveguides using SPP** [11462-91]
- 11462 2T **Design of nanoantenna for magnetic field enhancement** [11462-98]
- 11462 2Y **Plasmonic computational lithography for below 10-nm patterning** [11462-103]
- 11462 2Z **Near zero index THz perfect metasurface absorber using inverted conformal mapping** [11462-104]
- 11462 32 **Design and modeling of novel plasmonic switches based on phase change materials** [11462-108]

Introduction

This proceedings volume contains the papers presented at the conference on Plasmonics: Design, Materials, Fabrication, Characterization, and Applications XVIII, part of the SPIE Optics + Photonics Digital Forum held 24 August - 4 September 2020. The conference aimed to bring together specialists from diverse research areas and to provide a forum for the exchange of information on the latest progress of the plasmonics.

This year the conference included 18 oral sessions and a poster session covering various aspects of the latest development in plasmonics. The invited and contributed papers are classified into 10 topics listed as follows:

1. Plasmonic Materials and Nanostructures
2. Plasmonic Applications
3. Plasmonic/Nanophotonic device
4. Quantum Plasmonics
5. Emitting Device
6. Active Device
7. Plasmonic Sensing
8. Fundamental of Plasmonics
9. Metasurface
10. Plasmonic Laser.

The scientific program was composed of four keynote talks, 32 invited talks, 28 oral contributed presentations, and 42 poster presentations. This year the program committee suggested four keynote speakers reporting the emerging trends in plasmonics. The first talk was given by Prof. Teri Odom with the title "High-symmetry points in plasmonic lattices." Prof. Vladimir Shalaev presented the second one with the title "Plasmonic nanostructures from crystalline silver for ultrafast quantum photonics." The third keynote talk entitled "Electrically driven plasmonics" was delivered by Prof. Bert Hecht. For the fourth keynote talk, we invited Prof. Ortwin Hess to share his latest research, "Quantum plasmonic immunoassay sensing via nanoplasmonic room-temperature strong coupling." Furthermore, 39% of the invited speakers were female this year which maintained an admirable gender balance.

We are grateful to the program committee members and the SPIE staff who have worked with us in planning and organizing this Digital Forum. We greatly appreciate their tremendous efforts and continuous support. We also thank all the authors for their excellent contributions to the conference. We sincerely look forward to SPIE Optics + Photonics 2021.
