SPIE

Volume 11522

Proceedings of SPIE 0277-786X, V. 11522

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

Optical Manipulation and Structured Materials Conference 2020, edited by T. Omatsu, K. Dholakia, H. Ishihara, K. Sasaki,
Proc. of SPIE Vol. 11522, 1152201 · © 2020 SPIE · CCC code: 0277-786X/20/\$21 · doi: 10.1117/12.2574114

Proc. of SPIE Vol. 11522 1152201-1

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Paper Numbering: *Proceedings of SPIE* follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

vii	<i>Authors</i>
ix	<i>Conference Committee</i>
xi	<i>Introduction</i>

STRUCTURED OPTICAL FIELDS, BEAM SHAPING, POLARIZATION CONTROL, PULSE SHAPING, FREQUENCY EXTENSION, AND ULTRAFAST LASER TECHNOLOGIES

11522 02	Spin-orbit Laguerre-Gauss beam shaping (Invited Paper) [11522-1]
11522 03	Photothermal energy conversion in plasmonic nano gap antennas: application to localized ZnO growth for nanophotonics [11522-8]
11522 04	Molecular manipulation by plasmon induced optical force at solid-liquid interface under ambient condition [11522-9]
11522 05	Ultrafast azimuth rotation of linearly polarized beam by use of a chirped optical pulse pair [11522-15]
11522 06	Transmission spectral and diffraction pattern study on optical trapping and assembling of dielectric nanoparticles at solution/glass interface [11522-17]
11522 07	Revisit of azimuthal doppler shift for transverse flow measurement by using an optical vortex beam [11522-21]
11522 09	Spinning twin-mode generation in a bacteriorhodopsin suspension [11522-27]
11522 0A	Correction to spatial mode transformation in a modified interferometer [11522-30]
11522 0B	Isotopic hydrogen evolution reaction by plasmonic electrochemistry [11522-43]
11522 0C	Metal sphere separation in glass by the two laser beam illumination [11522-44]
11522 0D	A general method for evaluation of effective Raman wavefront and phase shift in atom interferometry [11522-53]

OPTICAL TRAPPING AND MANIPULATION, INCLUDING OPTICAL TWEEZER, HOLOGRAPHIC OPTICAL MANIPULATION, PLASMON TRAPPING, MULTI-PHOTON TRAPPING, AND ATOM TRAPPING AND COOLING

- 11522 OE   **Optical gradient force on Chiral nanoparticles** [11522-3]
- 11522 OF   **Orbiting of dielectric particles around a single-mode ultrathin fiber waveguide** [11522-4]
- 11522 OG   **Laser-heated microswimmers: optical manipulation of active particles (Invited Paper)** [11522-6]
- 11522 OH   **Manipulation of mica flakes using photothermally generated microbubbles** [11522-7]
- 11522 OI   **Vector beam induced mass transport in azo-polymer films** [11522-12]
- 11522 OJ   **A versatile fiber-optic platform for optical transport of solid particles and liquid droplets (Invited Paper)** [11522-16]
- 11522 OK   **The trapping of a single chloroform microdroplet in water using optical tweezers** [11522-18]
- 11522 OL   **Optical micromanipulation using nonlinear photo-responses** [11522-19]
- 11522 OM   **Spatio-temporally-controlled synthesis of lead halide perovskite crystals by laser trapping** [11522-25]
- 11522 ON   **Optical transport and sorting of fluorescent nanodiamonds inside a tapered glass capillary** [11522-35]
- 11522 OO   **Orbital analysis of single nanoparticle in-plane motion driven by an optical vortex** [11522-38]
- 11522 OP   **Observation of Mie scattering from a superconducting micro-particle** [11522-39]
- 11522 OQ   **Numerical simulation of micro- and nanoparticles orbital motion driven by an optical vortex** [11522-40]
- 11522 OR   **Theory of optical response measurement of dimer molecules by photoinduced force microscopy** [11522-41]
- 11522 OS   **Plasmon-induced transverse optical torque on nanostructures** [11522-42]
- 11522 OT   **Fast iterative phase retrieval in holographic data storage** [11522-47]
- 11522 OU   **Non interferometric phase retrieval in collinear holographic data storage** [11522-48]
- 11522 OV   **Manipulation of CdSe/ZnS quantum dots in room-temperature fluid with an inhomogeneous electric field and optical excitation** [11522-50]

FUNDAMENTAL RESEARCH AND ADVANCED TECHNOLOGIES ENABLED BY STRUCTURED MATERIALS, SUCH AS METAMATERIALS, METASURFACES, AND PHOTONIC CRYSTALS

- 11522 0W   **Enhancement of electrocatalytic oxygen reduction reaction on Au-Ag nanorings by plasmon excitation** [11522-10]
- 11522 0X   **Spin/orbital angular momentum conversion at a nano scale (Invited Paper)** [11522-11]
- 11522 0Y   **Development of achromatic flat-surface gradient index micro lenses** [11522-36]
- 11522 0Z   **Effect of photo-sensitizer and thermo-initiator concentrations on holographic recording performance of PQ/PMMA photopolymer** [11522-49]
- 11522 10   **Observation of structural color in random Au nano-islands fabricated on dielectric nanopillars** [11522-51]
- 11522 11   **Study on the causes of bubbles in PQ / PMMA optical holographic storage materials** [11522-52]

ADVANCED DEVICES AND INSTRUMENTS, INCLUDING SPATIAL LIGHT MODULATOR, ADAPTIVE OPTICS, AND NEAR-FIELD OPTICAL DEVICES

- 11522 12   **Broadband terahertz single pixel imaging system** [11522-31]

APPLICATIONS INCLUDING STRUCTURED MATERIAL PROCESSING, SINGLE MOLECULE TRAPPING, BIOPHOTONICS, METAMATERIALS, QUANTUM COMMUNICATIONS, AND SELECTIVE CONTROL OF CHEMICAL REACTION

- 11522 13   **Picosecond optical vortex induced chiral structures of azo-polymers via two photon absorption** [11522-2]
- 11522 14   **Fractional optical vortex creates a curved "spin-jet"** [11522-13]
- 11522 15   **Microscale perovskite crystal creation by optical vortex laser induced forward transfer** [11522-14]
- 11522 16   **High-pressure microscopy for manipulating bionanomachines in living cells** [11522-23]
- 11522 17   **Neuronal electrical activity induced by optical trapping of neurotransmitter receptors on neuron** [11522-24]
- 11522 18   **Multidimensional spatial entanglement transfer through our existing fiber optic network** [11522-32]
- 11522 19   **Silicon (111) chiral structures fabricated by illumination of optical vortex** [11522-37]
- 11522 1A   **Controlling the propagation of surface plasmon polaritons by geometric phases** [11522-45]

NOVEL APPROACHES, INCLUDING NOVEL INTERACTION BETWEEN OPTICAL FIELDS AND MATERIALS ON NANO-SCALE, NOVEL REGIMES OF SPIN-ORBIT INTERACTION, AND QUANTUM CONTROL OF MOLECULAR DYNAMICS

- 11522 1B   **Quantum vortex visualization in superfluid helium** [11522-5]
- 11522 1C   **Coherent oscillations of a birefringent microsphere in vacuum optical traps** [11522-20]
- 11522 1D   **Bond-breaking and adsorption of molecules at plasmonic hot-spots initiated by infrared vibrational excitation** [11522-33]
- 11522 1E   **Fluorescence correlation spectroscopy for analysis of atto-liter space using three-dimensional super-resolution microscopy** [11522-46]

INVITED SESSION OMC20

- 11522 1F   **Light-induced biological waveguides (Invited Paper)** [11522-26]
- 11522 1H   **Controlling orbital angular momentum in microscopic and topological systems (Invited Paper)** [11522-29]
- 11522 1I   **Enhanced optical trapping (Invited Paper)** [11522-34]

Authors

Numbers in the index correspond to the last two digits of the seven-digit citation identifier (CID) article numbering system used in Proceedings of SPIE. The first five digits reflect the volume number. Base 36 numbering is employed for the last two digits and indicates the order of articles within the volume. Numbers start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B...0Z, followed by 10-1Z, 20-2Z, etc.

Yasuhiro Sugawara, Osaka University (Japan)

Yasuyuki Tsuboi, Osaka City University (Japan)

Introduction

Since the first demonstration of an optical tweezer based on optical radiation forces (scattering and gradient forces) created by a tightly focused laser beam, optical tweezers have been widely investigated in a variety of research fields, including biology, physics, and chemistry. In fact, Dr. A. Ashkin was awarded Nobel Prize in Physics, for contributing to a pioneering work of optical manipulation, 2018.

Conventional optical tweezers have been mostly adopted to dielectric particles with a dimension range from hundreds of nanometers to tens of micrometers. However, they do not always enable us to efficiently trap nanoscale-sized dielectric particles as well as metallic particles.

In recent years, plasmonic tweezers based on enhanced radiation forces owing to surface plasmon polaritons in metallic nanostructures have been successfully demonstrated to efficiently trap and manipulate both nanoscale-sized dielectric and metallic particles.

Also, structured lights, such as higher order Laguerre-Gaussian and Bessel beams carry optical angular momenta, and they provide unique tweezing abilities, for instance, for inducing an orbital motion of the trapped particles without employing mechanical systems.

Since 2014, the OMC has been successfully collecting more than 80 participants from home and abroad. The OMC 2020 conference aims to present and discuss up-to-date scientific subjects, new technologies, and applications related to the fields of optical and plasmonic tweezers, the manipulation of nanostructures, structured optical fields and their satellite topics.
