Front Matter: Volume 11529

, "Front Matter: Volume 11529," Proc. SPIE 11529, Remote Sensing of the Ocean, Sea Ice, Coastal Waters, and Large Water Regions 2020, 1152901 (9 October 2020); doi: 10.1117/12.2584637

Event: SPIE Remote Sensing, 2020, Online Only

PROCEEDINGS OF SPIE

Remote Sensing of the Ocean, Sea Ice, Coastal Waters, and Large Water Regions 2020

Charles R. Bostater Jr.
Xavier Neyt
Françoise Viallefont-Robinet
Editors

22–25 September 2020
Online Only, United Kingdom

Sponsored by
SPIE

Cooperating Organisations
European Optical Society
KTN—Knowledge Transfer Network (United Kingdom)
Technology Scotland (United Kingdom)
Visit Scotland (United Kingdom)
BARSC—British Association of Remote Sensing (United Kingdom)
EARSeL—European Association of Remote Sensing Laboratories (Germany)
ISPRS—International Society for Photogrammetry and Remote Sensing

Published by
SPIE

Volume 11529

Proceedings of SPIE 0277-786X, V. 11529

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

Remote Sensing of the Ocean, Sea Ice, Coastal Waters, and Large Water Regions 2020, edited by
Charles R. Bostater, Xavier Neyt, Françoise Viallefont-Robinet, Proc. of SPIE Vol. 11529,

PROCEEDINGS OF SPIE

Volume 11529

Proceedings of SPIE 0277-786X, V. 11529

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

Proc. of SPIE Vol. 11529 1152901-2

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Paper Numbering: *Proceedings of SPIE* follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

WATER SURFACE SENSING I

11529 03	Mapping of shifting tidal estuaries to support inshore rescue (Invited Paper) [11529-1]
11529 04	Weighted principal component analysis fusion of satellite telemetry data [11529-2]
11529 05	Uncertainties in remote sensing reflectance at various spatial scales [11529-3]
11529 06	Detection of biogenic oil film near aquaculture sites seen by Sentinel-2 multispectral images [11529-4]
11529 07	UAS toolbox validation for coastal aquatic observations [11529-5]

WATER SURFACE SENSING II

11529 08	Ice floe tracking with Sentinel-2 (Invited Paper) [11529-6]
11529 09	Experimental study of wave damping due to ice floes in application to radar remote sensing of the marginal ice zone [11529-7]
11529 0C	Retrieval of slope spectrum of sea roughness by Snell's window imagery: theory and numerical experiment (one-dimensional sea roughness) [11529-11]

POSTER SESSION

11529 0D	Comparison of hyperspectral unmixing methods for ship detection on airborne hyperspectral images [11529-8]
11529 0E	Towards remote sensed wide-swath sea states from scatterometer: machine learning approach for ASCAT [11529-12]
11529 0F	An approach for estimating remote sensing reflectance based on the quasi-analytical algorithm [11529-13]
11529 0H	Manifestation of sub mesoscale marine eddies in the structure of surface slick bands [11529-15]
11529 0J	Study of island mass effect in the Xisha Archipelago based on the MODIS satellite data [11529-17]

- 11529 OL **Oil pollution hotspots on the Caspian Sea surface identified using satellite remote sensing**
[11529-19]
- 11529 OM **Retrieval of omnidirectional slope spectrum of sea roughness by underwater solar path**
images: theory and numerical experiment (one-dimensional sea roughness) [11529-20]
- 11529 OP **Mapping vortex structures in the Caspian Sea [11529-23]**
- 11529 OQ **Strong variations of radar return from the sea surface due to breaking surface waves [11529-24]**
- 11529 OR **Remote sensing of near surface layer of the ocean for inclined angles of sight [11529-25]**
- 11529 OS **Ka-band radar backscattering from breaking waves: wave tank study [11529-26]**
- 11529 OT **Observations of radar/optical slick signatures of marine processes in the coastal zone**
[11529-27]
- 11529 OU **Theoretical and experimental studies of sea surface current and wind waves spectra**
estimation using microwave Doppler marine radars [11529-28]
