**Volume 11597**

Proceedings of SPIE, 1605-7422, V. 11597

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

Medical Imaging 2021: Computer-Aided Diagnosis, edited by Maciej A. Mazurowski,  
Karen Drukker, Proc. of SPIE Vol. 11597, 1159701 · © 2021 SPIE  
CCC code: 1605-7422/21/\$21 · doi: 10.1117/12.2595447

Proc. of SPIE Vol. 11597 1159701-1

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at [SPIDigitalLibrary.org](http://SPIDigitalLibrary.org).

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

**Paper Numbering:** *Proceedings of SPIE* follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

# Contents

## LUNG I

---

- 11597 04 **Role of standard and soft tissue chest radiography images in COVID-19 diagnosis using deep learning [11597-1]**
- 11597 05 **Deep radiomics: deep learning on radiomics texture images [11597-66]**
- 11597 06 **COVID-19 pneumonia diagnosis using chest x-ray radiograph and deep learning [11597-3]**
- 11597 07 **Automatic localization of lung opacity in chest CT images: a real-world study [11597-4]**
- 11597 08 **Transferring CT image biomarkers from fibrosing idiopathic interstitial pneumonia to COVID-19 analysis [11597-5]**
- 11597 09 **Evolution of chest radiograph radiomics and association with respiratory and inflammatory parameters in COVID-19 patients undergoing prone ventilation: preliminary findings [11597-6]**
- 11597 0A **Classification of COVID-19 in chest radiographs: assessing the impact of imaging parameters using clinical and simulated images [11597-7]**

## BREAST I

---

- 11597 0B **Intrinsic radiomics phenotypes of DCI from breast DCE-MRI: demonstrating feasibility in interim analysis of the ECOG-ACRIN E4112 trial [11597-8]**
- 11597 0C **Electronic removal of lesions for more robust BPE scoring on breast DCE-MRI [11597-9]**
- 11597 0D **Comparison of 2D and 3D U-Net breast lesion segmentations on DCE-MRI [11597-10]**
- 11597 0E **Sparse analysis of deep features for characterization of breast masses [11597-11]**
- 11597 0F **Detecting invasive breast carcinoma on dynamic contrast-enhanced MRI [11597-12]**

## ABDOMEN I

---

- 11597 0G **Deformable MRI-CT liver image registration using convolutional neural network with modality independent neighborhood descriptors [11597-13]**
- 11597 0H **Deep learning-based deformable MRI-CBCT registration of male pelvic region [11597-14]**

- 11597 OI **3D deep learning for computer-aided detection of serrated polyps in CT colonography** [11597-15]
- 11597 OJ **Intensity normalization of prostate MRIs using conditional generative adversarial networks for cancer detection** [11597-16]
- 11597 OK **Ovarian assessment using deep learning-based 3D ultrasound super resolution** [11597-17]
- 11597 OL **Abdominal CT urography kidney segmentation using spatiotemporal fully convolutional network** [11597-18]

---

#### CARDIOVASCULAR AND OPHTHALMOLOGY

---

- 11597 OM **Segmentation of the thoracic aorta using an attention-gated U-Net** [11597-19]
- 11597 ON **Detection of left bundle branch block and obstructive coronary artery disease from myocardial perfusion scintigraphy using deep neural networks** [11597-20]
- 11597 OO **Modality agnostic intracranial aneurysm detection through supervised vascular surface classification** [11597-21]
- 11597 OP **Automated multi-channel segmentation for the 4D myocardial velocity mapping cardiac MR** [11597-22]

---

#### LUNG II

---

- 11597 OS **Lung nodule malignancy prediction in chest CT scans based on a CNN model with auxiliary task learning** [11597-25]
- 11597 OT **Traction bronchiectasis identification and quantitative biomarkers for follow-up in nonspecific interstitial pneumonia** [11597-26]
- 11597 OU **Region of interest discovery using discriminative concrete autoencoder for COVID-19 lung CT images** [11597-27]
- 11597 OV **Detecting COVID-19 infected pneumonia from x-ray images using a deep learning model with image preprocessing algorithm** [11597-28]

---

#### BREAST II

---

- 11597 OW **An improved mammography malignancy model with self-supervised learning** [11597-29]
- 11597 OX **Case-based diagnostic classification repeatability using radiomic features extracted from full-field digital mammography images of breast lesions** [11597-30]

- 11597 0Y **Estimating near term breast cancer risk from sequential mammograms using deep learning, radon cumulative distribution transform, and a clinical risk factor: preliminary analysis** [11597-31]
- 11597 0Z **Parenchymal field effect analysis for breast cancer risk assessment: evaluation of FFDM radiomic similarity** [11597-32]
- 11597 10 **Multi-task learning to incorporate clinical knowledge into deep learning for breast cancer diagnosis** [11597-34]
- 11597 11 **Applying a new feature fusion method to classify breast lesions** [11597-75]

---

#### MUSCULOSKELETAL

---

- 11597 12 **Medical knowledge-guided deep curriculum learning for elbow fracture diagnosis from x-ray images** [11597-35]
- 11597 14 **Two-stage meniscus segmentation framework integrating multiclass localization network and adversarial learning-based segmentation network in knee MR images** [11597-37]
- 11597 15 **Multi-resolution deep network ensembles for cervical intervertebral disc segmentation are biased by trainer** [11597-38]
- 11597 16 **Deep learning-based risk stratification for treatment management of multiple myeloma with sequential MRI scans** [11597-39]

---

#### PEDIATRIC/FETAL APPLICATIONS

---

- 11597 17 **Video-based infant monitoring using a CNN-LSTM scheme** [11597-40]
- 11597 18 **Automatic fetal presentation diagnosis from ultrasound images for rural zones: head location as an indicator for fetal presentation** [11597-41]

---

#### METHODOLOGY

---

- 11597 19 **Improved segmentation by adversarial U-Net** [11597-42]
- 11597 1A **Dense-layer-based YOLO-v3 for detection and localization of colon perforations** [11597-43]
- 11597 1B **Deep attention mask regional convolutional neural network for head-and-neck MRI multi-organ auto-delineation** [11597-44]
- 11597 1C **Multiview and multiclass image segmentation using deep learning in fetal echocardiography** [11597-45]

11597 1D **Multi-scale view-based convolutional neural network for breast cancer classification in ultrasound images [11597-46]**

---

**NEURORADIOLOGY INCLUDING HEAD AND NECK**

---

11597 1E **Differentiation of Parkinson's disease and non-Parkinsonian olfactory dysfunction with structural MRI data [11597-47]**

11597 1F **Use of biplane quantitative angiographic imaging with ensemble neural networks to assess reperfusion status during mechanical thrombectomy [11597-48]**

11597 1G **Classification of schizophrenia from functional MRI using large-scale extended Granger causality [11597-49]**

11597 1H **Otoscopy video screening with deep anomaly detection [11597-50]**

11597 1I **Fully automated segmentation of brain tumor from multiparametric MRI using 3D context U-Net with deep supervision [11597-51]**

11597 1J **Quantitative assessment of deformational plagiocephaly and brachycephaly at the point-of-care [11597-52]**

---

**ABDOMEN II**

---

11597 1K **Multi-institutional observer performance study for bladder cancer treatment response assessment in CT urography with and without computerized decision support [11597-53]**

11597 1L **MRI-based prostate and dominant lesion segmentation using deep neural network [11597-54]**

11597 1M **Clinically significant prostate cancer detection on MRI with self-supervised learning using image context restoration [11597-55]**

11597 1N **Intestinal region reconstruction of ileus cases from 3D CT images based on graphical representation and its visualization [11597-56]**

11597 1O **Modifying U-Net for small dataset: a simplified U-Net version for liver parenchyma segmentation [11597-57]**

---

**LUNG III**

---

11597 1P **RV strain classification from 3D CTPA scans using weakly supervised residual attention model [11597-58]**

11597 1Q **Reinforced learning from serial CT to improve the early diagnosis of lung cancer in screening [11597-59]**

- 11597 1S **Self-training with improved regularization for sample-efficient chest x-ray classification** [11597-61]
- 11597 1T **Severity assessment of COVID-19 using imaging descriptors: a deep-learning transfer learning approach from non-COVID-19 pneumonia** [11597-62]
- 11597 1U **COVID-19 opacity segmentation in chest CT via HydraNet: a joint learning multi-decoder network** [11597-63]

---

**POSTER SESSION**

- 11597 1V **A hybrid approach for mammary gland segmentation on CT images by embedding visual explanations from a deep learning classifier into a Bayesian inference** [11597-33]
- 11597 1W **Panoptic segmentation of wounds in a pig model** [11597-64]
- 11597 1X **Tooth recognition and classification using multi-task learning and post-processing in dental panoramic radiographs** [11597-65]
- 11597 1Y **An automatic diagnosis of idiopathic pulmonary fibrosis (IPF) using domain knowledge-guided attention models in HRCT images (Cum Laude Poster Award)** [11597-67]
- 11597 1Z **Extremely imbalanced subarachnoid hemorrhage detection based on DenseNet-LSTM network with class-balanced loss and transfer learning** [11597-68]
- 11597 20 **Radiomic features predict local failure-free survival in stage III NSCLC adenocarcinoma treated with chemoradiation** [11597-69]
- 11597 21 **3-D multitask deep neural networks for collateral imaging from dynamic susceptibility contrast-enhanced magnetic resonance perfusion** [11597-70]
- 11597 22 **CoroNet: a deep network architecture for enhanced identification of COVID-19 from chest x-ray images** [11597-71]
- 11597 23 **Deep learning analysis on raw image data: case study on holographic cell analysis** [11597-72]
- 11597 24 **Photographic cranial shape analysis using deep learning** [11597-73]
- 11597 26 **A novel feature reduction method to improve performance of machine learning model** [11597-76]
- 11597 27 **Spatial matching of magnified 2D mammography images and specimen radiographs: towards improved characterization of suspicious microcalcifications** [11597-77]
- 11597 28 **Multiparametric radiomics for predicting the aggressiveness of papillary thyroid carcinoma using hyperspectral images** [11597-78]
- 11597 29 **Deep neural networks trained for segmentation are sensitive to brightness changes: preliminary results** [11597-79]

- 11597 2A **Extraction of lung and lesion regions from COVID-19 CT volumes using 3D fully convolutional networks** [11597-80]
- 11597 2B **A general fully automated deep-learning method to detect cardiomegaly in chest x-rays** [11597-81]
- 11597 2C **Early detection of at-risk keratoplasties and prediction of future corneal graft rejection from pre-diagnosis endothelial cell images** [11597-82]
- 11597 2D **A system for fully automated monitoring of lesion evolution over time in multiple sclerosis** [11597-83]
- 11597 2E **Multi-task learning of perceptive feature for thyroid malignant probability prediction** [11597-84]
- 11597 2G **Fully automatic bone segmentation through contrast enhanced torso CT dataset** [11597-86]
- 11597 2H **Tissue-border detection in volumetric laser endomicroscopy using bi-directional gated recurrent neural networks** [11597-87]
- 11597 2J **Automatic segmentation of the structures in the nasal cavity and the ethmoidal sinus for the quantification of nasal septal deviations** [11597-89]
- 11597 2K **Architectural distortion detection in digital breast tomosynthesis with adaptive receptive field and adaptive convolution kernel shape** [11597-90]
- 11597 2L **Probabilistic segmentation of small metastatic brain tumors using liquid state machine ensemble** [11597-91]
- 11597 2M **Renal parenchyma segmentation in abdominal MR images based on cascaded deep convolutional neural network with signal intensity correction** [11597-92]
- 11597 2O **Fluorescence lifetime imaging endomicroscopy-based ex-vivo lung cancer prediction using multi-scale concatenated-dilation convolutional neural networks** [11597-94]
- 11597 2P **Assessing reproducibility in magnetic resonance (MR) radiomics features between deep-learning segmented and expert manual segmented data and evaluating their diagnostic performance in pregnant women with suspected placenta accreta spectrum (PAS)** [11597-95]
- 11597 2Q **Deep learning-based lesion segmentation in paediatric epilepsy** [11597-96]
- 11597 2S **3D U-net for registration of lung nodules in longitudinal CT scans** [11597-98]
- 11597 2T **Machine-learning-based clinical plaque detection using a synthetic plaque lesion model for coronary CTA** [11597-99]
- 11597 2U **Comparison between threshold-based and deep learning-based bone segmentation on whole-body CT images** [11597-100]
- 11597 2V **How to select training data to segment mammary gland region using a deep-learning approach for reliable individualized screening mammography** [11597-101]

- 11597 2W **Development of a radiogenomic biomarker for tumor characterization and prognosis in non-small cell lung cancer patients** [11597-102]
- 11597 2X **Lung infection and normal region segmentation from CT volumes of COVID-19 cases** [11597-103]
- 11597 2Y **Deep learning-based aggressive progression prediction from CT images of hepatocellular carcinoma** [11597-104]
- 11597 2Z **Applying quantitative image markers to predict clinical measures after aneurysmal subarachnoid hemorrhage** [11597-105]
- 11597 30 **Radiomic texture analysis for the assessment of osteoporosis on low-dose thoracic CT scans** [11597-106]
- 11597 31 **Triplet network for classification of benign and pre-malignant polyps** [11597-107]
- 11597 32 **Unsupervised survival prediction model from CT images of patients with COVID-19** [11597-108]
