Volume 11608

Proceedings of SPIE 0277-786X, V. 11608

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

Optics Frontiers Online 2020: Micro and Nanophotonics (OFO-4 2020), edited by Hui Liu, Proc. of SPIE
Vol. 11608, 1160801 · © 2020 SPIE · CCC code: 0277-786X/20/\$21 · doi: 10.1117/12.2590251

Proc. of SPIE Vol. 11608 1160801-1

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIEDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Paper Numbering: *Proceedings of SPIE* follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

OPTICS FRONTIERS ONLINE 2020: MICRO AND NANOPHOTONICS (OFO-4 2020)

11608 02	Non-spherical super-lens for surface plasmon [11608-1]
11608 03	The effect of shell thickness on plasmonic behaviors of Ag@MoS₂ core-shell nanoparticles [11608-2]
11608 04	Absorption and reflection properties of AZO grating with random textured surface in thin film solar cells [11608-3]
11608 05	Comparison of trapping Rayleigh particles using focused canonical vortex beam and noncanonical vortex beam [11608-4]
11608 06	Polarimetric multilongitudinal-mode fiber laser sensor for strain, temperature, and fiber birefringence measurement [11608-5]
11608 07	Few-layer metasurface with gold split-rings for high-efficiency asymmetric circular polarization conversion [11608-7]
11608 08	High-performance on-chip spectrometer based on micro-rings resonator [11608-8]
11608 09	Enhancement in figure of merit of silver-gold bimetallic surface plasmon resonance sensor [11608-9]
11608 0A	Lateral optical forces on two chiral nanospheres in plane waves of linear polarization [11608-10]
11608 0B	Design of broadband achromatic metalens in the visible [11608-12]
11608 0C	Microcavity structure based OCT fiber probe with controllable focal length [11608-13]
11608 0D	Rectifying the edge states by tuning the configuration of composite metal-dielectric particle chains [11608-14]
11608 0E	Design of extreme ultraviolet quarter wave plate based on linearly chirped multilayer mirror [11608-15]
11608 0F	Creation of a super diffraction limit focused spin hotspot by binary phase modulation [11608-16]
