Volume 11655

Proceedings of SPIE, 1605-7422, V. 11655

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

Label-free Biomedical Imaging and Sensing (LBIS) 2021, edited by Natan T. Shaked,
Oliver Hayden, Proc. of SPIE Vol. 11655, 1165501 · © 2021 SPIE
CCC code: 1605-7422/21/\$21 · doi: 10.1117/12.2596724

Proc. of SPIE Vol. 11655 1165501-1

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIEDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Paper Numbering: *Proceedings of SPIE* follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

AUTOFLUORESCENCE

- 11655 07 Distinguishing cellular respiration vs. oxidative stress in turbid media using UV-excited autofluorescence spectroscopy [11655-5]

DEEP LEARNING

- 11655 09 Label-free detection of rare cancer cells using deep learning and magnetic levitation principle [11655-10]

MULTISPECTRAL, DEEP UV, AND PHOTOACOUSTIC IMAGING

- 11655 0C Deep learning-based virtual staining of label-free ultraviolet (UV) microscopy images for hematological analysis [11655-13]
- 11655 0D Multispectral fluorescence imaging of ovarian tissue for the characterization and classification of early stage ovarian cancer [11655-14]
- 11655 0H Label-free multi-spectral deep UV imaging of prostate cancer tissue [11655-18]

OCT AND INTERFEROMETRY

- 11655 0Q New model for understanding the relationship between tissue composition and photothermal optical coherence tomography signals [11655-26]

PHASE IMAGING

- 11655 0S Epi-illumination tomographic quantitative phase imaging identifies brain tumor margins [11655-28]

RAMAN IMAGING

- 11655 13 Coherent anti-Stokes Raman spectroscopy enhanced by multiple overtone resonances (Invited Paper) [11655-45]
- 11655 18 Raman mapping of transferrin and ferritin distributions in breast cancer cells [11655-44]

SPECTROSCOPY AND SCATTERING

- 11655 1B **Highly sensitive vibrational imaging by fluorescence detection of mid-infrared photothermal effect [11655-48]**
- 11655 1C **Optical and molecular longitudinal tracking of primary colorectal murine tumors shows differences in the angiogenic response to maximum-tolerated and metronomic approaches [11655-49]**
- 11655 1G **Progress toward a VUV Raman spectrometer to detect pathogens [11655-53]**

POSTER SESSION

- 11655 1K **Automated detection of macrophages in quantitative phase images by deep learning using a mask region-based convolutional neural network [11655-54]**
