, "Front Matter: Volume 1777," Proc. SPIE 1777, First European Conference on Smart Structures and Materials, 177701 (1 May 1992); doi: 10.1117/12.2298024

SPIE.

Event: First European Conference on Smart Structures and Materials, 1992, Glasgow, United Kingdom

CONTENTS

SESSION (1) PLENARY SESSION

08.45	Opening Address	
09.00	Modelling integrated sensor/actuator functions in realistic environments	1
	V V Varadan, Liang-Chi Chin and V K Varadan Pennsylvania State University, USA Invited Speaker	
09.30	Fiber optic smart structures for aerospace applications	7
	E Udd McDonnell Douglas Electronic Systems Company, USA Invited Speaker	
10.00	A concept of intelligent materials and the current activities of intelligent materials in Japan	13
	T Takagi Ion Engineering Research Institute Corporation, Japan Invited Speaker	
10.30	Smart materials research in the USAF Wright Laboratory	19
	T G Gerardi, R Pachter, R L Crane and W W Adams Wright-Patterson AFB, USA	
10.50	COFFEE	

SESSION (2) FIBRE OPTIC SENSORS I

11.10	A multifunction sensor for smart structure applications	†
	J R Dunphy United Technologies Research Center, USA Invited Speaker	
11.40	Monitoring of prestressed concrete structures with optical fiber sensors	23
	R Wolff and H-J Miesslerer SICOM GmbH, Germany	
12.00	Sensor system architectures for spatially-resolved dynamic strain measurement using optical fibers	31
	V A Handerek and A J Rogers King's College London, UK	
12.20	Elastic curve recovery by a quasi-distributed polarimetric fiber optic sensor	35
	A Barberis, P Escobar Rojo, V Gusmeroli, C Mariottini, and M Martinelli CISE Tecnologie Innovative SpA, Italy	
12.40	Passive phase interrogation and multiplexing of two-mode fiber strain sensors for smart structures systems	39
	T A Berkoff and A D Kersey Naval Research Laboratory, USA	
13.00	LUNCH	
	Optical-fiber sensor-network for temperature and proximity control	45
	A Mencaglia, M Brenici and A G Mignani IROE-CNR, Italy	

† Paper not available at time of printing. First European Conference on Smart Structures and Materials, edited by Brian Culshaw, Peter G. Gardes, Alister McDonach, Proc. of SPIE Vol. 1777, 177701 · © (1992) 2017 SPIE · CCC code: 0277-786X/17/\$18 · doi: 10.1117/12.2298024

Digital systems for automatic control of optical resonators used as gravitational waves interferometric detectors	49
F Barone, E Calloni, R De Rosa, F Fusco, L Milano and G Russo Istituto Nazionale di Fisica Nucleare, Italy and Università di Napoli, Italy L Di Fiore Università di Napoli, Italy	
Quasi-distributed fiber-optic sensor for simultaneous absolute measurement of strain and temperature	53
L Wosinski, J P Bétend-Bon, M Breidne, B Sahlgren and R Stubbe Institute of Optical Research, Sweden	
A digital technique for passive demodulation in a fiber optic homodyne interferometer	57
W Jin, D Walsh, D Uttamchandani and B Culshaw University of Strathclyde, Glasgow	
Spatially-weighted optical fiber sensing methods	413
R O Claus, K A Murphy, B R Fogg and J A Greene Virginia Polytechnic, USA A M Vengsarkar AT & T Bell Laboratories, USA	
Fiber-grating based strain sensor with phase sensitive detection	61
A D Kersey Naval Research Laboratory, USA T A Berkoff SFA Inc., USA W W Moray United Technologies Research Center, USA	

SESSION (3) FIBRE OPTIC SENSORS II/COMPOSITES

14.10	What do embedded optical fibers really measure?	69
J S Sirkis and A Dasgupta University of Maryland, USA		
14.30	Fiber Bragg grating sensor demonstration in glass-fiber reinforced polyester composite	73
H D Simonsen and R Paetsch Per Udsen Co. Aircraft Industry A/S, Denmark J R Dunphy United Technologies Research Center, USA		
14.50	Unidirectional glass reinforced plastic composite monitoring with white light quasi distributed polarimetric sensing network	77
P Sansonetti, J J Guerin, D Viton, C Gouffier and D Engrand Bertin & CIE, France		
15.10	Composite strain sensing with a combined interferometric and polarimetric fiber-optic strain gauge	81
N Fürstenau and W Schmidt D.L.R., Germany H-C Goetting Institute for Structural Mechanics, Germany		

15.30	Spatial modulation within embedded fiber optic sensors for smart structures characterization	85
	M A El-Sherif and F K Ko Drexel University, USA	
15.50	COFFEE	
	Experimental application of a phase-strain-temperature model for polarimetric optical fiber strain sensors	89
	P L Nielson Technical University of Denmark, Denmark	
	J S Sirkis and Yu-Lung Lo University of Maryland, USA	
	Process-induced birefringence variations in fiber optic embedded in composite materials	93
	M Turpin, J Chazelas and H Stoppiglia Thomson-CSF, France	
 SESSION (4) SMART SENSING APPLICATIONS		
16.10	The evolution of smart structures/materials	97
	W B Spillman University of Vermont, USA Invited Speaker	
16.40	Finite element analysis of composite laminates containing transversely embedded optical fiber sensors	115
	R Davidson and S S J Roberts AEA Technology, UK	
17.00	Smart structural composites with the ability to monitor vibration and damage	123
	N Shaikh, S Chen, Y Lu and D Timm University of Nebraska, USA	
17.20	High temperature strain, temperature and damage sensors for advanced aerospace materials	127
	A Wang, K Murphy, R May, G Wang, S Gollapudi and R Claus Virginia Polytechnic, USA	
17.40	Conformal acoustic waveguide technology for smart aerospace structures	131
	J N Schoess and C T Sullivan Honeywell Systems & Research Centre, USA	
18.00	Fiber optic strain sensing for smart adaptive structures	135
	B Mason, D Hogg and R M Measures University of Toronto, Canada	
	Vehicle weighing in motion with fiber optic sensors	139
	S Teral Alcatel Cable Contracting, France	
	Fluorescent plastic fiber sensors for detection of humidity, breathing condition and temperature	143
	S Muto and H Ito Yamanashi University, Japan	

An optical-fiber fatigue crack detection and monitoring system	147
K F Hale Brunel University, UK	
Fiber optic distributed temperature sensing	151
P R Orrell and A P Leach York Sensors Ltd, UK	
Preliminary evaluation for developing smart ropes using embedded sensors	155
R G May, R O Claus and K A Murphy Virginia Polytechnic, USA	
Thermo-elastic auto-measurement of the Grüneisen parameter by a polarimetric fiber-optic sensor	159
P Escobar Rojo and M Martinelli CISE Tecnologie Innovative SpA, Italy M G Beghi and G Caglioti Politecnico di Milano, Italy	

SESSION (5) ACTUATOR APPLICATIONS

08.30	Mechanics issues of induced strain actuation	163
	C A Rogers Virginia Polytechnic, USA Invited Speaker	
09.00	Piezoelectric ceramics in smart actuators and systems	177
	K Uchino The Pennsylvania State University, USA	
09.20	The stability of strain in shape-memory actuators	181
	C M Friend Cranfield Institute of Technology, UK	
09.40	Active vibration control of flexible linkage mechanisms using shape memory alloy fiber-reinforced composites	185
	A Venkatesh, J Hilborn, J-E Bidaux and R Gotthardt Swiss Federal Institute of Technology, Switzerland	
10.00	Shape memory alloy adjustable camber (SMAAC) control surfaces	189
	C H Beauchamp, R H Nadolink, S C Dickinson and L M Dean Naval Undersea Warfare Center, USA	
10.20	COFFEE	
	Measurement of impulsive pressure applied on a thin plate by piezoelectric transducers	193
	T Adachi, S Ujihashi and H Matsumoto Tokyo Institute of Engineering, Japan	
	Thermal cycling of shape memory alloy wires using semiconductor heat pump modules	197
	M A Thrasher, A R Shahin, P H Meckl and J D James Purdue University, USA	

SESSION (6) SMART CONCEPTS FOR CIVIL ENGINEERING I

- 10.50 **Recent developments in active structural control research in the USA** 201
 G W Housner
 California Institute of Technology, USA
 S F Masri
 University of Southern California, USA
 Invited Speaker
 T T Soong
 State University of New York, USA
- 11.20 **Bearings of a bridge fitted with load measuring devices based on an optical fiber technology** 207
 J M Caussignac, A Chabert, G Morel
 LCPC, France
 P Rogez and J Seantier
 Societe Freyssinet-Industries, France
- 11.40 **Possibilities for the use of strain gauged reinforcement in smart structures** 211
 R H Scott and P A T Gill
 University of Durham, UK
- 12.00 **Fiber-optic interferometric sensors for concrete structures** 215
 P Escobar, V Gusmeroli and M Martinelli
 CISE Tecnologie Innovative SpA, Italy
 I Lanciani and P Morabito
 ENEL-CRIS, Italy
- 12.20 **Monitoring the performance of real building structures** 219
 H D Wright and R M Lloyd
 University of Strathclyde, UK
- 12.40 LUNCH
- Fiber-optic intensity-modulated sensors for continuous observation of concrete and rock-fill dams** 223
 A Holst
 Wolfgang Habel Institute of Structural Engineering, Germany
 R Lessing
 SICOM GmbH, Germany

SESSION (7) SMART CONCEPTS FOR CIVIL ENGINEERING II

- 13.50 **Structural control research at the National Science Foundation** 227
 J Eleonora Sabadell
 National Science Foundation, USA
 Invited Speaker
- 14.20 **Proposal of a hybrid active dynamic vibration absorber for high-rise buildings under earthquake excitation** 233
 K Yoshida and T Watanabe
 Keio University, Japan
- 14.40 **An advance notification system for smart structures in seismic zones** 237
 H A Smith, Y Takeuchi and H C Shah
 Stanford University, USA

15.00	Optical fiber sensors for the quantitative measurement of strain in concrete structures	241
	B Kruschwitz, R O Claus, K A Murphy, R G May and M F Gunther Virginia Polytechnic, USA	
15.20	Predictive control of seismic response of structure taking into account the soil-structure interaction	245
	T Sato and K Toki Kyoto University, Japan	
15.40	Installation and preliminary results from fiber optic sensors embedded in a concrete building	409
	D R Huston, P L Fuhr, P J Kajenski, T P Ambrose and W B Spillman University of Vermont, USA	
16.00	COFFEE	
	Towards a methodology for designing active elements into civil structures	251
	S A Austin, R M Goodall and J S Nolan Loughborough University, UK	

SESSION (8) IMPLICATIONS FOR RELIABILITY

16.20	Short term fatigue behaviour of composite materials containing embedded fiber optic sensors and actuators	255
	S S J Roberts and R Davidson AEA Technology, UK	
16.40	Stress monitoring and re-adjustment in concrete structures	263
	C Abdunur LCPC, France	
17.00	The influence of fiber optic sensors on the performance of advanced composite components	267
	N Fox, P Sheard, and S Steadman Pera International, UK	
17.20	Evaluation of an optical signal response and failure mechanisms induced by the transverse shear deformation in smart structures	277
	A K Tay Ford Motor Company, USA D A Wilson and J R Houghton Tennessee Technological University, USA R L Wood TEXTRON Aerostructures, USA	
	CAIO (Computer aided internal optimization): A powerful method to optimize fiber arrangement in composite materials	281
	R Kriechbaum, J Schäfer and C Mattheck Karlsruhe Nuclear Research Center, Germany	
	Performance of fiber optic sensors in fracture mechanics applications	285
	A Shukla and R Singh University of Rhode Island, USA N Narendran Mechanical Technology Inc., USA	

SESSION (9) CONTROL & SIGNAL PROCESSING ISSUES

08.30	Technological challenges with smart structures in German aircraft industry Chr Boller, H Hönlinger and O Sensburg MBB - Deutsche Aerospace, Germany	289
08.50	Smart health monitoring of aircraft structures using neural networks J N Kudva and N Munir Northrop Corporation, USA	†
09.10	Application of fuzzy control/neural networks to rendezvous simulation of space structure Y Matsuzaki, H Hosoda and S Abe Nagoya University, Japan	293
09.30	Identification and feedback control in structures with piezoceramic actuators H T Banks, K Ito and Y Wang University of Southern California, USA	297
09.50	COFFEE Acceleration feedback method applied to active tuned mass damper I Nishimura, T Kobori, M Sakamoto, N Koshika, K Sasaki and S Ohnui Kobori Research Complex, Japan	301
	Control design for smart flexible structures R Katebi Strathclyde University, UK	305
	ARMA models for real-time system identification of smart structures R S Betros, N R Steffen and M J Triller TRW Space & Technology Group, USA	309
	Optimal location of structural control devices: A progressive collapse analogy J Holnicki-Szulc Polish Academy of Sciences, Poland F López-Almansa, J Rodeller and P Cruells Technical University of Catalonia, Spain	313

SESSION (10) CONTROL SYSTEMS USING SMART TECHNOLOGY

10.10	D.L.R.'s smart structures research programme E Breitbach D.L.R., Germany Invited Speaker	†
10.40	Optimal placement of piezoelectric actuators in adaptive truss structures R Lammering D.L.R., Germany	317
11.00	The smart structures technology in the vibration control of helicopter blades in forward flight F Nitzsche and E Breitbach D.L.R., Germany	321

† Paper not available at time of going to press

11.20	Influence of electrode size on the active suppression of sound reflection from submerged plates using distributed piezoelectric actuators	325
	P E Barbone Stanford University, USA A M B Braga Pontifícia Universidade Católica do Rio de Janeiro, Brazil	
11.40	Smart structures with piezopolymers for space applications	329
	W Charon Dornier GmbH, Germany G Lindner and H Roth Fachhochschule Ravensburg-Weingarten, Germany	
12.00	Active flutter suppression of a tube conveying fluid	333
	J Tani and Y Sudani Tohoku University, Japan	
12.20	LUNCH	
	Structural design of active precision structures	337
	W Charon Dornier GmbH, Germany	
	The application of signal processing and knowledge based techniques to the health monitoring of gas turbine engines	341
	M N Brown, R Stewart and T Durrani University of Strathclyde, UK T Buggy BAeSEMA Ltd, UK B Rickman Dowty Maritime, UK	
	An innovative class of macroscopically smart composite structural materials featuring both actuators and sensors	345
	M V Gandhi, B S Thompson and S R Kasiviswanathan Michigan State University, USA	
	Smart slewing frames	349
	D J Leo and D J Inman State University of New York at Buffalo, USA	
	Non-resonant systems for adaptive and smart structural control	353
	N Shaikh and Y Song University of Nebraska-Lincoln, USA	

SESSION (11) FUTURE DEVELOPMENTS IN SMART CONCEPTS

13.30	Light emitting intelligent Langmuir-Blodgett films	407
	S Kurosawa, K Sugai and S Miyata Tokyo University of Agriculture and Technology, Japan Invited Speaker	
14.00	Smart structures and intelligent materials for biomedical applications	357
	G W Hastings University of London, UK Invited Speaker	

14.30	Simulation of the dynamic behaviour of polymeric gels W R Witkowski, D J Segalman, D B Adolf and B Hance Sandia National Laboratories, USA	363
14.50	Smart materials which sense, activate and repair damage; hollow porous fibers in composites release chemicals from fibers for self-healing, damage prevention, and/or dynamic control C M Dry University of Illinois at Urbana-Champaign, USA	367
15.10	COFFEE Superionic conductors as smart materials: Foundations and areas for applications S Sigaryov Russian Academy of Sciences, Russia	373
	Multiple frequency interference in photorefractive media D E Cox and S S Welch NASA Langley Research Center, USA	379

SESSION (12) SMART TECHNOLOGY APPLICATIONS

15.30	Actuation strain decoupling through enhanced directional attachment in plates and aerodynamic surfaces R Barrett University of Kansas, USA	383
15.50	Adaptive/conformal wing design for future aircraft F Austin, G J Knowles, W G Jung, C C Tung and E M Sheedy Grumman Corporate Research Center, USA	387
16.10	Design and characterisation of a smart sensor/actuator sub-system for large flexible space structures D Uffen and H Scholaert AASTRA Aerospace Inc., Canada	†
16.30	Mechanical validation of smart structures A J Bronowicki, R S Betros, T W Nye, L J McIntyre, L R Miller and G R Dvorsky TRW Space and Defense, USA	†
16.50	In-situ acoustical and optical waveguide sensors C V O'Keefe, B B Djordjevic and B N Ranganathan Martin Marietta Laboratories, USA	391
	Material processing diagnostic by optical interferometry P Vavassori and M Martinelli CISE Tecnologie Innovative, Italy	395
	Use of electro-rheological fluids for adaptive vibration isolation R J Randall and W F Tsang Royal Naval Engineering College, UK	399

† Paper not available at time of going to press

Transient response of an anisotropic solid Y Wang and R K N D Rajapakse University of Manitoba, Canada	403
Author Index	417
Keyword Index	419
