SESSION 1 RECORDING MATERIALS AND MATERIAL EVALUATION

648803 Characterization of PVA doped with different metallic salts as conductor polymer and as holographic film sensitized with ammonium dichromate [6488-02]

648804 Polyelectrolyte as holographic recording medium [6488-03]
S. Toxqui-López, A. Olivares-Pérez, Instituto Nacional de Astrofísica, Óptica y Electrónica (Mexico)

648805 Organic photoluminescent holograms [6488-04]

648806 Photopolymers containing epoxy monomers for holographic recording [6488-05]
J. Kim, B. D. Sarwade, K. Rameshbabu, E. Kim, Yonsei Univ. (South Korea); S.-G. Lee, Ibule Photonics, Co., Ltd. (South Korea)

648807 Pulsed holographic gratings in azo-polymethacrylates with different molecular architectures [6488-06]
P. Forcén, C. Sánchez, F. J. Rodríguez, R. Alcalá, L. T. Oriol, Univ. de Zaragoza (Spain); S. Hvilsted, K. Jankova, Technical Univ. of Denmark (Denmark); J. Loos, Eindhoven Univ. of Technology (Netherlands)

648808 Quasi in situ microscopic study of hologram build-up in LiNbO₃ crystals [6488-07]
I. Bányász, G. Mandula, Research Institute of Solid State Physics and Optics (Hungary)

Pagination: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print and on CD-ROM. Papers are published as they are submitted and meet publication criteria. A unique, consistent, permanent citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon they are published online, and connects the same identifier to all online, print, and electronic versions of the publication.

SPIE uses a six-digit CID article numbering system in which:
• The first four digits correspond to the SPIE volume number.
• The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages.
648809 Study for Bragg detuning effect and asymmetry of diffraction efficiency on the transmission and the reflection hologram [6488-08]
Y.-Y. Kwon, K.-Y. Kim, J.-Y. Park, Daewoo Electronics (South Korea); J.-Y. Park, Hanyang Univ. (South Korea)

64880A Measurement of refractive index of photopolymer for holographic gratings [6488-09]
E. Watanabe, J. Mizuno, C. Fujikawa, K. Kodate, Japan Women’s Univ. (Japan)

64880B Electro-optical characteristics of holographic replication using a photopolymer and ZnCl₂ [6488-10]

SESSION 2 TECHNIQUES AND APPLICATIONS

64880C Polarization experiments in holographic interferometry (Invited Paper) [6488-11]
G. Ackermann, J. Eichler, L. Dünkel, C. Schneeweiss, Technische Fachhochschule Berlin (Germany)

64880D Problem of twin-image elimination in 2D computer synthesized hologram [6488-12]
E. Braginets, National Taras Shevchenko Univ. of Kyiv (Ukraine); V. Girnyk, State Enterprise Polygraphcombine of Ukraine (Ukraine); S. Kostyukovych, Institute of Semiconductor Physics (Ukraine); A. Soroka, National Taras Shevchenko Univ. of Kyiv (Ukraine); I. Androsyuk, Institute of Semiconductor Physics (Ukraine)

64880G Adaptive optics for holographic data storage [6488-15]
N. Ishii, T. Muroi, N. Kinoshita, K. Kamijo, N. Shimidzu, NHK Science and Technical Research Labs. (Japan)

64880H Novel diffraction grating light guide for LED backlight [6488-16]
E. Miyamoto, S. Maruyama, A. Nagano, L. M. Murillo-Mora, T. Toda, F. Iwata, Toppan Printing Co., Ltd. (Japan)

64880I Holographic wavefront sensor: fast sensing no computing [6488-17]
G. Andersen, U.S. Air Force Academy (USA); F. Ghebremichael, K. Gurley, Lockheed Martin Missile and Fire Control (USA)

64880J Harmonically related gratings-based quadrature phase interferometers [6488-18]
Z. Yaqoob, J. Wu, X. Cui, X. Heng, C. Yang, California Institute of Technology (USA)

SESSION 3 DISPLAY AND COLOR HOLOGRAPHY

64880L Holographic video display based on guided-wave acousto-optic devices (Invited Paper) [6488-19]
D. E. Smalley, Q. Y. J. Smithwick, V. M. Bove, Jr., MIT Media Lab. (USA)

64880M Ethereal presences in holography and photography [6488-46]
M. Richardson, K. Byrne, DeMontfort Univ. (United Kingdom)

Tung H. Jeong, Lake Forest College (USA)

4 Digital, Electronic, and Computer Holography
Christopher W. Slinger, QinetiQ (United Kingdom)
Introduction

This conference which takes place every year in January is an important international event in the field of practical holography and holographic materials. This year featured many interesting contributions in various fields during two intensive days of oral papers as well as a special poster session. The conference was divided into four main sessions: Recording Materials and Material Evaluation, Techniques and Applications, Display and Color Holography, and Digital, Electronic, and Computer Holography.

Many papers are devoted to conventional and new recording materials. The papers on photopolymer materials are increasing every year. For example, this year there was a paper on organic photoluminescent holograms. An invited paper on photo-thermo-refractive glass for large-aperture HOEs was one of the interesting new recording materials. Another invited paper was demonstrating polarization effects in holographic interferometry. Among applications, a new diffraction grating light guide for LED backlight can be mentioned. More real-time digital holography systems are now able to generate full-color displays. It is also interesting to note that MIT’s Media lab continues the important work on holographic video, which started when Stephen Benton was responsible for the holographic R&D program at MIT. He was also the chair of this conference for many years.

The poster papers describe, for example, new materials, lighting systems for holograms, digital holography, and encryption. A new holographic camera system with an extended field of view was described in a poster from University of Arizona.

This year’s conference program was lacking art-related papers, which in the past has been an interesting addition to papers dealing with scientific, industrial, and technology topics. Only one paper is included this year and it would be nice to see more art holography papers next year.

I would like to thank the Practical Holography XXI program committee members for their contribution. The session chairmen: Gerald L. Heidt, Jean-Marc R. Fournier, Tung H. Jeong and Christopher W. Slinger are acknowledged for helping with the paper presentations during the four sessions. The co-chair Roger A. Lessard, Université Laval, Canada, was not able to be involved in this year’s conference caused by health problems.

I look forward to seeing you in San Jose in January 2008.

Hans I. Bjelkhagen
