Pagination: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print and on CD-ROM. Papers are published as they are submitted and meet publication criteria. A unique, consistent, permanent citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon they are published online, and connects the same identifier to all online, print, and electronic versions of the publication.

SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages.

Introduction

Welcome to the 2007 edition of the SPIE Visualization and Image-Guided Procedures conference proceedings. The conference has evolved into a premier venue for our field, where one can see the latest advances as well as catch up with old friends. The conference is also an ideal venue for students to gain an understanding of the research community, and student participation has always been strong. This year we received approximately 125 abstract submissions and we were able to showcase 56 oral presentations and 49 posters.

Going forward, we plan to expand the conference next year to include a modeling component and the new name will be "Visualization, Image-Guided Procedures, and Modeling". The conference has always evolved to meet the needs of the research community, and the incorporation of models for medical procedures is becoming increasingly important. We are looking to increase the number of abstracts submitted and encourage active participation, from academic research groups to government labs to private industry.

It would not be possible to run this conference without the first-rate support of the SPIE staff members, including the office staff, management, and the editors. They make our job easier and allow us to focus on the technical content. We would also like to thank our committee members who help review abstracts and judge posters. The committee names are listed on the preceeding page. Finally, we would like to thank all the attendees who come to give talks, present posters, and participate in the meeting. We look forward to seeing you next year and for many years to come as we continue to collectively develop this technology toward the ultimate goal of improved patient care.
