Proceedings of SPIE—The International Society for Optical Engineering, 9780819466457, v. 6524

SPIE is an international technical society dedicated to advancing engineering and scientific applications of optical, photonic, imaging, electronic, and optoelectronic technologies.

The papers included in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. The papers published in these proceedings reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from this book:

Contents

xi	<i>Symposium Committee</i>
xiii	<i>Conference Committee</i>
xvii	<i>Introduction</i>

SESSION 1 EAP AS EMERGING ACTUATORS AND BIOMIMETIC TECHNOLOGIES

- 652402 **How fish swim: flexible fin thrusters as an EAP platform (Keynote Paper)** [6524-01]
G. V. Lauder, Harvard Univ. (USA)
- 652403 **Electroactive polymers (EAP) as an enabling tool in biomimetics** [6524-02]
Y. Bar-Cohen, Jet Propulsion Lab. (USA)
- 652404 **A hands-on paradigm for EAP education: undergraduates, pre-college students, and beyond** [6524-03]
X. Tan, D. Kim, E. Goodman, Michigan State Univ. (USA); M. Shahinpoor, Univ. of New Mexico (USA) and Environmental Robots, Inc. (USA)
- 652405 **Benefits and challenges of using ionic polymer metal composites in medical device applications** [6524-04]
C. Yung, D. Kim, N. Bhat, Pavad Medical, Inc. (USA)

SESSION 2 ELECTRONIC EAP

- 652406 **A road to practical dielectric elastomer actuators based robotics and mechatronics: discrete actuation (Invited Paper)** [6524-05]
J.-S. Plante, L. M. Devita, S. Dubowsky, Massachusetts Institute of Technology (USA)
- 652407 **Robust adaptive control of conjugated polymer actuators** [6524-06]
Y. Fang, X. Tan, Michigan State Univ. (USA); G. Alici, Univ. of Wollongong (Australia)

Pagination: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print and on CD-ROM. Papers are published as they are submitted and meet publication criteria. A unique, consistent, permanent citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon they are published online, and connects the same identifier to all online, print, and electronic versions of the publication.

SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages.

- 652408 **Characterization of electroelastomers based on interpenetrating polymer networks** [6524-07]
S. M. Ha, Univ. of California/Los Angeles (USA); M. Wissler, Empa (Switzerland); R. Pelrine, S. Stanford, SRI International (USA); G. Kovacs, Empa (Switzerland); Q. Pei, Univ. of California/Los Angeles (USA)
- 652409 **Electromechanical coupling in cylindrical dielectric elastomer actuators** [6524-08]
M. Wissler, Empa (Switzerland) and Swiss Federal Institute of Technology (Switzerland); E. Mazza, Swiss Federal Institute of Technology (Switzerland) and Empa (Switzerland); G. Kovacs, Empa (Switzerland)

SESSION 3 IONIC EAP I

- 65240A **Can we overcome the relaxation of ionic polymer-metal composites?** [6524-09]
D. Kim, K. J. Kim, Univ. of Nevada/Reno (USA)
- 65240B **Finite element simulations of the bending of the IPMC sheet** [6524-67]
D. Pugal, Tartu Univ. (Estonia) and Univ. of Nevada, Reno (USA); H. Kasemägi, Tartu Univ. (Estonia); K. J. Kim, Univ. of Nevada, Reno (USA); M. Kruusmaa, A. Aabloo, Tartu Univ. (Estonia)
- 65240C **Charge redistribution under dynamic actuation of ionic polymer-metal composites** [6524-11]
L. Zhang, Y. Yang, Nanyang Technological Univ. (Singapore)

SESSION 4 MEMORIAL HONORING OF ALBERTO MAZZOLDI

- 65240D **Contractile folded dielectric elastomer actuators (Invited Paper)** [6524-12]
F. Carpi, D. De Rossi, Univ. of Pisa (Italy)
- 65240G **Integrated cell-based sensors and cell clinics utilizing conjugated polymer actuators** [6524-15]
E. Smela, M. Christophersen, S. B. Prakash, M. Urdaneta, M. Dandin, P. Abshire, Univ. of Maryland (USA)

SESSION 5 NEW AND OTHER EAP I

- 65240H **Towards artificial molecular motor-based electroactive/photoactive biomimetic muscles (Invited Paper)** [6524-16]
T. J. Huang, The Pennsylvania State Univ. (USA)
- 65240I **Description and characterization of an electroactive polymer synthetic jet actuator** [6524-17]
G. A. Slipper, J. E. Hubbard, Jr., Univ. of Maryland, National Institute of Aerospace (USA)
- 65240J **Linear artificial muscle actuator based on synthetic elastomer** [6524-18]
N. H. Chuc, J. Park, D. V. Thuy, H. S. Kim, J. Koo, Y. Lee, J. Nam, H. R. Choi, Sungkyunkwan Univ. (South Korea)

- 65240K **Investigation of electro-mechanical coupling and visco-elastic behavior of cellulose based electro-active paper actuator** [6524-19]
C. Yang, Andong National Univ. (South Korea); L. Zhao, Y. Li, H. S. Kim, J. Kim, Inha Univ. (South Korea)

SESSION 6 NEW AND OTHER EAP II

- 65240L **Attempting a classification for electrical polymeric actuators (Invited Paper)** [6524-20]
T. F. Otero, J. López Cascales, A. J. Fernández-Romero, Univ. Politécnica de Cartagena (Spain)
- 65240M **Epoxy hydrogels as sensors and actuators** [6524-21]
P. Calvert, P. Patra, D. Duggal, Univ. of Massachusetts Dartmouth (USA)
- 65240N **New electrode materials for dielectric elastomer actuators** [6524-22]
W. Yuan, T. Lam, Univ. of California/Los Angeles (USA); J. Biggs, Artificial Muscle, Inc. (USA); L. Hu, Z. Yu, S. Ha, D. Xi, Univ. of California/Los Angeles (USA); M. K. Senesky, Artificial Muscle, Inc. (USA); G. Grüner, Q. Pei, Univ. of California/Los Angeles (USA)
- 65240O **Large response photo-activated polymer gel actuator** [6524-23]
M. Banister, Medipacs, LLC (USA)

SESSION 7 EAP CHARACTERISTICS AND DATABASE

- 65240P **Electroactive polymer actuator online database (Invited Paper)** [6524-24]
J. D. Madden, N. Genereux, K. A. Shkuratoff, A. van der Star, D. Poon, D. Irwin, P. Cheng, G. Hsu, L. Filipozzi, The Univ. of British Columbia (Canada)

SESSION 8 IONIC EAP II

- 65240S **Chemo-electric characterization and modeling of the high surface area electrodes in ionic polymer transducers** [6524-27]
T. Wallmersperger, Univ. Stuttgart (Germany) and Virginia Polytechnic Institute and State Univ. (USA); B. J. Akle, Virginia Polytechnic Institute and State Univ. (USA) and Lebanese American Univ. (Lebanon); E. Akle, American Univ. of Beirut (Lebanon); D. J. Leo, Virginia Polytechnic Institute and State Univ. (USA)
- 65240T **Manufacturing of ionic polymer-metal composites (IPMCs) that can actuate into complex curves** [6524-28]
B. L. Stoimenov, Biologically Integrative Sensors Lab., RIKEN (Japan); J. M. Rossiter, Biologically Integrative Sensors Lab., RIKEN (Japan) and Univ. of Bristol (United Kingdom); T. Mukai, Biologically Integrative Sensors Lab., RIKEN (Japan)
- 65240U **Mixed-ion linear actuation of PPy and PEDOT in propylene carbonate-triflate electrolytes** [6524-29]
R. Kiefer, P. A. Kilmartin, G. A. Bowmaker, R. P. Cooney, J. Travas-Sejdic, Univ. of Auckland (New Zealand)
- 65240V **Synthesis and characterization of porous polyaniline conductive polymers** [6524-30]
A. D. Price, H. E. Naguib, Univ. of Toronto (Canada)

SESSION 9 NANO AND MICRO EAP

- 652410 **Mechanical properties of electroactive polymer microactuators with ion-implanted electrodes** [6524-35]
S. Rosset, M. Niklaus, P. Dubois, École Polytechnique Fédérale de Lausanne (Switzerland); M. Dadras, Univ. of Neuchâtel (Switzerland); H. R. Shea, École Polytechnique Fédérale de Lausanne (Switzerland)

SESSION 10 MODELING

- 652411 **Development and modeling of novel extensional ionic polymer transducers (Invited Paper)** [6524-36]
B. Akle, Lebanese American Univ. (Lebanon); T. Wallmersperger, Univ. Stuttgart (Germany); D. Leo, Virginia Polytechnic Institute and State Univ. (USA) and Defense Advanced Research Projects Agency (USA)
- 652413 **A scalable model for trilayer conjugated polymer actuators and its experimental validation** [6524-38]
Y. Fang, X. Tan, Y. Shen, N. Xi, Michigan State Univ. (USA); G. Alici, Univ. of Wollongong (Australia)
- 652414 **Self-sensing McKibben actuators using dielectric elastomer sensors** [6524-39]
N. C. Goulbourne, S. Son, J. W. Fox, Virginia Polytechnic Institute and State Univ. (USA)
- 652415 **Integrated extension sensor based on resistance and voltage measurement for a dielectric elastomer** [6524-56]
B. O'Brien, J. Thode, I. Anderson, Univ. of Auckland (New Zealand); E. Calius, Industrial Research Ltd. (New Zealand); E. Haemmerle, S. Xie, Univ. of Auckland (New Zealand)
- 652416 **On a distributed parameter model for electrical impedance of ionic polymer** [6524-41]
K. Takagi, Nagoya Univ. (Japan) and BMC RIKEN (Japan); Y. Nakabo, BMC RIKEN (Japan) and AIST (Japan); Z.-W. Luo, Kobe Univ. (Japan) and BMC RIKEN (Japan); K. Asaka, AIST (Japan) and BMC RIKEN (Japan)
- 652417 **Modeling of nonlinear effects in pH sensors based on polyelectrolytic hydrogels** [6524-42]
M. Guenther, G. Gerlach, Technische Univ. Dresden (Germany); T. Wallmersperger, Univ. Stuttgart (Germany)

SESSION 11 APPLICATIONS OF EAP I

- 652418 **Development of soft actuator: mechanism with vibration element using dielectric elastomer to generate large displacement** [6524-44]
M. Haruna, K. Kubo, K. Fukusumi, T. Tamida, Mitsubishi Electric Corp. (Japan)
- 652419 **EAP as actuator for a gripper with variable curvature** [6524-45]
C. Pagano, I. Fassi, Institute of Industrial Technology and Automation Research Council (Italy)
- 65241A **Study of flapping actuator modules using IPMC** [6524-46]
H.-I. Kim, D.-K. Kim, J.-H. Han, Korea Advanced Institute of Science and Technology (South Korea)

- 65241B **A linear actuator from a single ionic polymer-metal composite (IPMC) strip** [6524-47]
J. M. Rossiter, Univ. of Bristol (United Kingdom) and Bio-mimetic Control Research Ctr., RIKEN (Japan); B. L. Stoimenov, T. Mukai, Bio-mimetic Control Research Ctr., RIKEN (Japan)
- 65241C **Ionic polymer metal composite as energy harvesters** [6524-48]
D. Dogruer, R. Tiwari, K. Kim, Univ. of Nevada/Reno (USA)
- 65241D **Sensor-actuator coupled device for active tracheal tube using solid polymer electrolyte membrane** [6524-49]
T. Ihara, Suzuka Univ. of Medical Science (Japan) and The Institute of Physical and Chemical Research (Japan); T. Nakamura, Suzuka Univ. of Medical Science (Japan); T. Mukai, The Institute of Physical and Chemical Research (Japan); K. Asaka, National Institute of Advanced Industrial Science and Technology (Japan)

SESSION 12 APPLICATIONS OF EAP II

- 65241E **Applications of conducting polymers: robotic fins and other devices (Invited Paper)** [6524-51]
J. L. Tangorra, P. A. Anquetil, N. S. Weideman, T. Fofonoff, I. W. Hunter, MIT BioInstrumentation Lab. (USA)
- 65241F **Applications of dielectric elastomer EPAM sensors** [6524-52]
M. Rosenthal, N. Bonwit, C. Duncheon, J. Heim, Artificial Muscle, Inc. (USA)
- 65241G **A compact electroactive polymer actuator suitable for refreshable Braille display** [6524-53]
K. Ren, S. Liu, M. Lin, Y. Wang, Q. M. Zhang, The Pennsylvania State Univ. (USA)
- 65241H **Capacitive charging and background processes in carbon nanotube yarn actuators** [6524-54]
T. Mirfakhrai, Univ. of British Columbia (Canada); M. Kozlov, M. Zhang, S. Fang, R. H. Baughman, Univ. of Texas at Dallas (USA); J. D. W. Madden, Univ. of British Columbia (Canada)
- 65241I **Piezoresistive sensors for smart textiles** [6524-55]
P. Calvert, P. Patra, T.-C. Lo, C. H. Chen, A. Sawhney, A. Agrawal, Univ. of Massachusetts Dartmouth (USA)

SESSION 13 APPLICATIONS OF EAP III

- 65241J **Tri-layer conducting polymer actuators with variable dimensions (Invited Paper)** [6524-57]
R. Minato, G. Alici, S. McGovern, G. Spinks, Univ. of Wollongong (Australia)
- 65241K **Design and fabrication of tactile sensors based on electroactive polymer composites** [6524-58]
J. Wang, C. Xu, M. Taya, Y. Kuga, Univ. of Washington (USA)
- 65241N **Low-voltage highly tunable diffraction grating based on dielectric elastomer actuators** [6524-61]
M. Aschwanden, A. Stemmer, ETH Zürich (Switzerland)

- 65241O **Concept study on active shells driven by soft dielectric EAP** [6524-62]
P. Lochmatter, G. Kovacs, Empa (Switzerland)
- 65241P **Piezoelectric polymers actuators for precise shape control of large scale space antennas** [6524-63]
Q. Chen, D. Natale, B. Neese, K. Ren, M. Lin, Q. M. Zhang, M. Pattom, K. W. Wang, Pennsylvania State Univ. (USA); H. Fang, E. Im, Jet Propulsion Lab. (USA)
- 65241Q **Electro-active polymers as a novel actuator technology for lighter-than-air vehicles** [6524-64]
S. Michel, C. Dürager, Empa (Switzerland); M. Zobel, E. Fink, Technical Univ. Berlin (Germany)

POSTER SESSION

- 65241R **The mechanical properties of ionic polymer-metal composites** [6524-10]
I.-S. Park, S.-M. Kim, D. Kim, K. J. Kim, Univ. of Nevada/Reno (USA)
- 65241S **Thermomechanical characterization of shape memory polymers** [6524-65]
B. Atli, F. Gandhi, Pennsylvania State Univ. (USA); G. Karst, Cornerstone Research Group, Inc. (USA)
- 65241T **EAP hydrogels for pulse-actuated cell system (PACS) architectures** [6524-68]
R. E. Plata, H. R. Rogers, Univ. of Arizona (USA); M. Banister, S. Vohnout, Medipacs LLC (USA); D. V. McGrath, Univ. of Arizona (USA)
- 65241U **IPMC-assisted miniature disposable infusion pumps with embedded computer control** [6524-69]
S. Vohnout, Medipacs LLC (USA); S.-M. Kim, I.-S. Park, Univ. of Nevada/Reno (USA); M. Banister, Medipacs LLC (USA); R. Tiwari, K. J. Kim, Univ. of Nevada/Reno (USA)
- 65241V **Development of dielectric elastomer driven micro-optical zoom lens system** [6524-70]
H. Kim, J. Park, N. H. Chuc, H. R. Choi, J. D. Nam, Y. Lee, Sungkyunkwan Univ. (South Korea); H. S. Jung, Samsung Electro-Mechanics Co. (South Korea); J. C. Koo, Sungkyunkwan Univ. (South Korea)
- 65241W **Modeling a dielectric elastomer actuator based on the McKibben muscle** [6524-72]
T. G. McKay, Univ. of Auckland (New Zealand); E. Calius, Industrial Research Ltd. (New Zealand); I. Anderson, Univ. of Auckland (New Zealand)
- 65241X **Characterization of direct and converse piezoelectricity of cellulose-based electro-active paper** [6524-73]
G. Y. Yun, Y. Li, H. S. Kim, J. Kim, Inha Univ. (South Korea)
- 65241Y **Improvement of viscoelastic effects of dielectric elastomer actuator and its application for valve devices** [6524-74]
Y.-Y. Jhong, C.-M. Huang, C.-C. Hsieh, C.-C. Fu, National Tsing-Hua Univ. (Taiwan)
- 65241Z **An experimental study on the dynamic response of dielectric elastomer membranes** [6524-75]
J. W. Fox, N. C. Goulbourne, Virginia Polytechnic Institute and State Univ. (USA)

- 652420 **Nanoporous carbon nanotube electrode for stable polypyrrole actuator** [6524-76]
Z. Yu, D. Xi, T. Lam, Q. Pei, Univ. of California/Los Angeles (USA)
- 652421 **Polypyrrole operating voltage limits in aqueous sodium hexafluorophosphate** [6524-77]
T. Shoa, M. Cole, Univ. of British Columbia (Canada); N. R. Munce, V. Yang, Sunnybrook and Women's Health Sciences Ctr. (Canada); J. D. Madden, Univ. of British Columbia (Canada)
- 652423 **Electrically driven mechanochemical artificial muscle: for smooth 3D movement in robotics and prosthetics** [6524-79]
L. Rasmussen, Ras Labs. LLC (USA)
- 652424 **Extending applications of dielectric elastomer artificial muscle** [6524-80]
S. Chiba, SRI International (USA); M. Waki, Hyper Drive Co. Ltd. (Japan); R. Kornbluh, R. Pelrine, SRI International (USA)
- Symposium Plenary Presentation:**
Revolutionary transitions of GE technology in NDE prognostics and health monitoring
Ed Hindle, Thadd Patton, GE Aviation (USA); Tom Batzinger, GE Global Research Ctr. (USA)

- 11 Applications of EAP I
Gabor M. Kovacs, Empa (Switzerland)
Tissaphern Mirfakhrai, The University of British Columbia (Canada)
John D. W. Madden, The University of British Columbia (Canada)

- 12 Applications of EAP II
Patrick A. Anquetil, Massachusetts Institute of Technology (USA)
Seon-Jeong Kim, Hanyang University (South Korea)
- 13 Applications of EAP III
Gürsel Alıcı, University of Wollongong (Australia)
Ji Su, NASA Langley Research Center (USA)

Introduction

The large displacement actuation that can be produced by EAP materials and their functional similarity to biological muscles are increasingly attracting the interest of researchers from many fields. Turning these materials into actuators-of-choice continues to require solidifying the technical foundations and identifying niche applications where their unique capabilities would provide edge for critical need(s). This SPIE Electroactive Polymers Actuators and Devices (EAPAD) Conference serves as the leading international forum for presenting the latest progress and discussions among the attendees regarding capabilities, challenges, and potential future directions.

The keynote speaker was George V. Lauder, Harvard University, and the title of his presentation was "How fish swim: flexible fin thrusters as an EAP platform." This presentation gave the attendee details about the swimming mechanism of fish as well as the needs for making robotic fish using EAP. This paper tied well with the EAP-in-Action session this year where a blimp was demonstrated to be steered by dielectric elastomer EAP strips on its four fins. This blimp is currently under redesign by EMPA, Switzerland, towards propelling it in the air by tail-wagging, like fish. This EAP-in-Action Session was held on Monday, March 19, 2007, and it included six demos by organizations from Italy, Japan, Switzerland, and the USA. The company Artificial Muscle, Inc. presented the first high-volume standard commercial EAP product. Other demos in this session included speaker, power generator, active display, lens positioner, proportional valve, and others. The presenters included Artificial Muscle, Inc.; Hyper Drive Corporation; Materials Science & Technology; Empa; Research Centre "E. Piaggio"; University of Pisa; Ras Labs; and SRI International.

The conference this year included 80 presentations and was well attended by leading world experts in the field, including members of academia, industry, and government agencies from the USA and overseas. Significant progress was reported in each of the topics of the EAP infrastructure. The papers focused on issues that can forge the transition to practical use, including improved materials, better understanding of the principles responsible for the electromechanical behavior, analytical modeling, processing, and characterization methods, as well as considerations and demonstrations of various applications. Papers in this conference covered the following topics:

- Electroactive polymers (EAP) and non-electroactive polymer (NEAP) materials
- Theoretical models, analysis, and simulation of EAP and computational chemistry
- Support technologies, including electroding, synthesis, processing, shaping, and fabrication
- Methods of testing and characterization of EAP
- EAP as multifunctional materials
- EAP scalability to miniature (MEMS, micro and nano) and large dimensions
- EAP as artificial muscles, actuators, and sensors

- Design, control, intelligence, and kinematic issues related to robotic and biomimetic operation of EAP
- Applications of EAP under consideration and in progress.

The efforts described in the presented papers are showing significant improvements in understanding of the electromechanical principles and better methods of dealing with the challenges to the materials' applications. Researchers are continuing to develop analytical tools and theoretical models to describe the electro-chemical and -mechanical processes, nonlinear behavior, as well as methodologies of design and control of the activated materials. EAP with improved response were described including electrostrictive, IPMC, dielectric, carbon nanotubes, conductive polymers, and other types.

To provide the attendees with an opportunity to learn about EAP, an introductory course was given on Sunday, March 18, 2007, as part of the EAPAD conference. The course was entitled "Electroactive Polymer Actuators and Devices," and the lead instructor was Conference Chair Y. Bar-Cohen, who presented an overview and covered applications that are currently developed and ones that are being considered. The subject of ionic EAP was covered by J. Madden from the University of British Columbia, Vancouver, Canada. Further, the topic of electronic EAP was covered by Q. Pei from the University of California at Los Angeles (UCLA). This course was intended for engineers, scientists, and managers who need to understand the basic concepts of EAP, or are interested in learning, applying, or engineering mechanisms or devices using EAP materials. Also, it was intended for those who are considering research and development in EAP materials and their present and/or future applications. For those who are seeking to self-learn about EAP, a comprehensive coverage of the topic is given in the second edition of the book that was published by SPIE Press entitled "Electroactive Polymers (EAP) Actuators as Artificial Muscles" [<http://ndeaq.jpl.nasa.gov/nasa-nde/yosi/yosi-books.htm>], as well as the WW-EAP webhub [<http://eap.jpl.nasa.gov>], with links to the leading research and development labs worldwide, and the WW-EAP Newsletter.

In closing, I would like to extend a special thanks to all the conference attendees, session chairs, the EAP-in-Action demo presenters, the members of the EAPAD program organization committee, and my cochair, Gabor Kovacs, Empa, Switzerland. In addition, special thanks are extended to the SPIE staff who helped in making this conference a great success.

Yoseph Bar-Cohen
