SPIE—The International Society for Optical Engineering

Proceedings of SPIE—The International Society for Optical Engineering, 9780819466754, v. 6553

SPIE is an international technical society dedicated to advancing engineering and scientific applications of optical, photonic, imaging, electronic, and optoelectronic technologies.

The papers included in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. The papers published in these proceedings reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from this book:

Contents

xi	Conference Committee
xv	Introduction

SESSION 1 ACOUSTICS

- 655303 **CFAR detection algorithm for acoustic-seismic landmine detection** [6553-02]
G. M. Matalkah, M. M. Matalgah, J. M. Sabatier, Univ. of Mississippi (USA)
- 655304 **Direct mechanical landmine excitation with scanner laser Doppler vibrometer surface measurements** [6553-03]
S. Bishop, U.S. Army RDECOM CERDEC NVESD (USA) and The Catholic Univ. of America (USA); J. Vignola, J. Judge, P. Tsopelas, The Catholic Univ. of America (USA); A. Kurdila, Virginia Polytechnic Institute (USA)

SESSION 2 ELECTROMAGNETIC INDUCTION I

- 655306 **Effects of magnetic soil on metal detectors: preliminary experimental results** [6553-06]
Y. Das, Defence R&D Canada-Suffield (Canada)
- 655308 **Estimating magnetic susceptible from EMI data** [6553-08]
I. Shamatava, Dartmouth College (USA); B. E. Barrowes, U.S. Army Engineer Research and Development Ctr. (USA); F. Shubitidze, Dartmouth College (USA); B. Zhang, Massachusetts Institute of Technology (USA); K. O'Neill, Dartmouth College (USA) and U.S. Army Engineer Research and Development Ctr. (USA); P. Fernández, K. D. Paulsen, Dartmouth College (USA)

SESSION 3 ELECTROMAGNETIC INDUCTION II

- 65530B **Inferring the location of buried UXO using a support vector machine** [6553-11]
J. P. Fernández, K. Sun, Dartmouth College (USA); B. Barrowes, U.S. Army Corps of Engineers (USA); K. O'Neill, Dartmouth College (USA) and U.S. Army Corps of Engineers (USA); I. Shamatava, F. Shubitidze, K. D. Paulsen, Dartmouth College (USA)

Pagination: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print and on CD-ROM. Papers are published as they are submitted and meet publication criteria. A unique, consistent, permanent citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon they are published online, and connects the same identifier to all online, print, and electronic versions of the publication.

SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages.

- 65530C **Buried metallic object identification by EMI sensor** [6553-12]
M. Sezgin, G. Kaplan, M. Birim, Y. Bahadırlar, Information Technologies Institute (Turkey)
- 65530D **Performance of a four parameter model for modeling landmine signatures in frequency domain wideband electromagnetic induction detection systems** [6553-13]
E. B. Fails, P. A. Torrione, Duke Univ. (USA); W. R. Scott, Jr., Georgia Institute of Technology (USA); L. M. Collins, Duke Univ. (USA)
- 65530E **A combined NSMC and pole series expansion approach for UXO discrimination** [6553-14]
F. Shubitidze, Dartmouth College (USA); B. E. Barrowes, U.S. Army Engineer Research and Development Ctr (USA); K. O'Neill, Dartmouth College (USA) and U.S. Army Engineer Research and Development Ctr. (USA); I. Shamatava, J. P. Fernández, Dartmouth College (USA)
- 65530F **NSMC for UXO discrimination in cases with overlapping signatures** [6553-15]
F. Shubitidze, Dartmouth College (USA); B. E. Barrowes, U.S. Army Engineer Research and Development Ctr. (USA); K. O'Neill, Dartmouth College (USA) and U.S. Army Engineer Research and Development Ctr. (USA); I. Shamatava, J. P. Fernández, K. Sun, Dartmouth College (USA)

SESSION 4 RADAR

- 65530G **An assessment of the fundamental performance of GPR against buried landmines (Invited Paper)** [6553-16]
D. J. Daniels, ERA Technology Ltd. (United Kingdom)
- 65530H **Obstacle avoidance and concealed target detection using the Army Research Lab ultra-wideband synchronous impulse reconstruction (UWB SIRE) forward imaging radar** [6553-17]
L. Nguyen, D. Wong, M. Ressler, F. Koenig, B. Stanton, G. Smith, J. Sichina, K. Kappra, Army Research Lab. (USA)
- 65530I **Fusion of disturbed soil feature for down-looking ground-penetrating radar mine detection** [6553-18]
E. M. Rosen, E. Ayers, Institute for Defense Analyses (USA)

SESSION 5 LITTORAL STUDIES I

- 65530N **Multi-task learning for underwater object classification** [6553-23]
J. R. Stack, F. Crosby, R. J. McDonald, Naval Surface Warfare Ctr. (USA); Y. Xue, L. Carin, Duke Univ. (USA)
- 65530O **Underwater magnetic gradiometer for magnetic anomaly detection, localization, and tracking** [6553-24]
S. Kumar, GE Security (USA); G. Sulzberger, J. Bono, Naval Surface Warfare Ctr. (USA); D. Skvoretz, GE Security (USA); G. I. Allen, T. R. Clem, Naval Surface Warfare Ctr. (USA); M. Ebbert, S. L. Bennett, R. K. Ostrom, A. Tzouris, GE Security (USA)
- 65530P **Dynamic tree segmentation of sonar imagery** [6553-25]
J. T. Cobb, Naval Surface Warfare Ctr. (USA); K. C. Slatton, Univ. of Florida (USA)

- 65530Q **Underwater target classification using the wing BOSS and multi-channel decision fusion** [6553-26]
N. Wachowski, M. R. Azimi-Sadjadi, J. Cartmill, Colorado State Univ. (USA)

SESSION 6 LITTORAL STUDIES II

- 65530S **Automated target classification in high resolution dual frequency sonar imagery** [6553-28]
T. Aridides, M. Fernández, Lockheed Martin (USA)
- 65530T **Impact of image normalization and quantization on the performance of sonar computer-aided detection/computer-aided classification (CAD/CAC) algorithms** [6553-29]
C. M. Ciany, W. C. Zurawski, Raytheon Integrated Defense Systems (USA)
- 65530U **Coherent-based method for detection of underwater objects from sonar imagery** [6553-30]
J. D. Tucker, M. R. Azimi-Sadjadi, Colorado State Univ. (USA); G. J. Dobeck, Naval Surface Warfare Ctr. Panama City (USA)

SESSION 7 SPECTRAL SENSING I

- 65530V **Image processing of landmines** [6553-31]
D. J. Daniels, R. Allan, S. Jennings, O. Lockwood, ERA Technology Ltd. (United Kingdom)
- 65530W **HYDRUS simulations of soil surface temperatures** [6553-32]
J. Kleissl, Univ. of California, San Diego (USA); H. Moreno, J. M. H. Hendrickx, New Mexico Tech (USA); J. Simunek, Univ. of California, Riverside (USA)
- 65530X **Assessments of phenomenologies for multi-optical mine detection** [6553-33]
D. Letalick, Swedish Defence Research Agency (Sweden); S. Sjökvist, Swedish Defence Research Agency (Sweden) and Linköping Univ. (Sweden); M. Uppsäll, D. Menning, P. Andersson, C. Grönwall, Swedish Defence Research Agency (Sweden)

SESSION 8 SPECTRAL SENSING II

- 65530Z **Buried mine detection in airborne imagery using co-occurrence texture features** [6553-35]
S. Tiwari, S. Agarwal, Univ. of Missouri, Rolla (USA); A. Trang, U.S. Army RDECOM, CERDEC, NVESD (USA)
- 655310 **Multi-classifier buried mine detection using MWIR images** [6553-36]
B. Ling, Migma Systems, Inc. (USA); A. H. Trang, C. Phan, US Army RDECOM CERDEC NVESD (USA)
- 655311 **Processed infrared images of plastic and metallic landmines in an Argentine project** [6553-37]
E. H. Castro, H. A. Abbate, Instituto de Investigaciones Científicas y Técnicas de las FFAA (Argentina) and Univ. de Buenos Aires (Argentina); M. Costanzo, Instituto de Investigaciones Científicas y Técnicas de las FFAA (Argentina); M. E. Mejail, J. Gambini, J. C. Jacobo Berlles, J. M. Santos, P. Borensztein, Univ. de Buenos Aires (Argentina)

- 655312 **Landmine detection using B-spline deformable contours in IR images** [6553-38]
J. Gambini, M. E. Buemi, H. Abbate, E. Castro, J. J. Berllés, J. M. Santos, M. Mejail, Univ. de Buenos Aires (Argentina)
- 655313 **A patterned and un-patterned minefield detection in cluttered environments using Markov marked point process** [6553-39]
A. Trang, U.S. Army, RDECOM, CERDEC, NVESD (USA); S. Agarwal, Univ. of Missouri, Rolla (USA); P. Regalia, The Catholic Univ. of America (USA); T. Broach, T. Smith, U.S. Army, RDECOM, CERDEC, NVESD (USA)
- 655314 **Trial of a vehicle mounted UK electro-optic countermine sensor system as part of a UK/US collaborative program** [6553-86]
R. M. Deas, N. A. Playle, K. J. Long, Defence Science and Technology Lab. (United Kingdom)

SESSION 9 SPECTRAL SENSING III

- 655315 **Real-time airborne hyperspectral imaging of land mines** [6553-40]
T. Ivanco, S. Achal, Itres Research Ltd. (Canada); J. E. McFee, Defence R&D Canada Suffield (Canada); C. Anger, J. Young, Itres Research Ltd. (Canada)
- 655316 **A thermal infrared hyperspectral imager (tasi) for buried landmine detection** [6553-41]
S. Achal, Itres Research Ltd. (Canada); J. E. McFee, Defence R&D Canada Suffield (Canada); T. Ivanco, C. Anger, Itres Research Ltd. (Canada)
- 655317 **Development of a terrain surface model for optical property computation** [6553-42]
J. M. Cathcart, Georgia Institute of Technology (USA)
- 655318 **Methods for determining best multi-spectral bands using hyperspectral data** [6553-43]
E. M. Winter, Technical Research Associates, Inc. (USA)
- 655319 **SPICE: a sparsity promoting iterated constrained endmember extraction algorithm with applications to landmine detection from hyperspectral imagery** [6553-44]
A. Zare, P. Gader, Univ. of Florida (USA)

SESSION 10 MULTISENSOR, SYSTEMS, AND TESTING I

- 65531B **MINEHOUND: transition to production** [6553-46]
D. J. Daniels, P. Curtis, N. Hunt, ERA Technology Ltd. (United Kingdom); J. Braunstein, A. Merz, Vallon GmbH (Germany)
- 65531C **The development of the hand-held dual-sensor ALIS** [6553-47]
M. Sato, Tohoku Univ. (Japan); J. Fujiwara, Tokyo Gas Co. Ltd. (Japan); K. Takahashi, Tohoku Univ. (Japan)
- 65531D **The evaluation test of hand-held dual-sensor ALIS in Croatia and Cambodia** [6553-48]
M. Sato, K. Takahashi, Tohoku Univ. (Japan)

- 65531E **Test and evaluation of Japanese GPR-EMI dual-sensor systems at Benkovac Test Site in Croatia** [6553-49]
J. Ishikawa, Japan Science and Technology Agency (Japan) and Tokyo Denki Univ. (Japan); K. Furuta, Tokyo Denki Univ. (Japan); N. Pavković, Croatian Mine Action Ctr. (Croatia)

SESSION 11 MULTISENSOR, SYSTEMS, AND TESTING II

- 65531F **Automated calibration methods for robotic multisensor landmine detection** [6553-50]
J. G. Keranen, J. Miller, G. Schultz, Applied Research Associates (USA); Z. Topolosky, U.S. Army RDECOM CERDEC (USA)
- 65531G **Investigation of the detection of shallow tunnels using electromagnetic and seismic waves** [6553-51]
T. Counts, G. Larson, A. C. Gürbüz, J. H. McClellan, W. R. Scott, Jr., Georgia Institute of Technology (USA)
- 65531H **Visual cues for landmine detection** [6553-52]
J. J. Staszewski, Carnegie Mellon Univ. (USA); A. D. Davison, Army Research Lab. (USA); J. A. Tischuk, D. J. Dippel, Carnegie Mellon Univ. (USA)
- 65531I **NATO-SCI 133 guides for planning and reporting tests of countermining equipment** [6553-53]
R. Schleijpen, TNO Defence, Security and Safety (Netherlands); H. Bertrand, Institute for Defense Analyses (USA)
- 65531J **An investigation into landmine neutralisation techniques for a vehicle-mounted countermining system** [6553-54]
D. Lockley, Defence Science and Technology Lab. (United Kingdom)

SESSION 12 EXPLOSIVE DETECTION I: ENVIRONMENTAL

- 65531L **Adsorption coefficients for TNT on soil and clay minerals** [6553-56]
R. Rivera, J. Pabón, O. Pérez, M. A. Muñoz, N. Mina, Univ. of Puerto Rico at Mayagüez (Puerto Rico)
- 65531M **Development of a multi-scale packing methodology for evaluating fate and transport processes of explosive-related chemicals in clayey soils** [6553-57]
S. Rodriguez, I. Padilla, S. Hwang, Univ. of Puerto Rico Mayagüez (Puerto Rico)
- 65531N **Effect of environmental parameters on the chemical signature of TNT in soil** [6553-59]
M. Irazábal, V. Florián, M. Castro, S. P. Hernández-Rivera, J. G. Briano, Univ. of Puerto Rico, Mayagüez (Puerto Rico)
- 65531O **Influence of environmental conditions in fate and transport of ERCs in a 3D SoilBed model: spatial and temporal assessment in a sandy soil** [6553-82]
A. A. Anaya A., I. Padilla, S. Hwang, Univ. of Puerto Rico Mayagüez (Puerto Rico)
- 65531P **Vapor sampling of ERCs for environmental assessment in atmospheric and soil settings** [6553-83]
D. Acevedo, I. Padilla, P. M. Torres, A. Torres, A. A. Anaya, Univ. of Puerto Rico Mayagüez (Puerto Rico)

- 65531Q **Physical modeling of 2,4-DNT gaseous diffusion through unsaturated soil** [6553-85]
A. Torres, I. Padilla, S. Hwang, Univ. of Puerto Rico at Mayagüez (Puerto Rico)

SESSION 13 EXPLOSIVE DETECTION II

- 65531R **False alarm reduction during landmine detection** [6553-60]
P. J. Prado, A. Chongpison, L. Doraisamy, GE Security (USA)
- 65531S **Research and development of humanitarian landmine detection system by a compact discharge-type fusion neutron source** [6553-61]
K. Yoshikawa, K. Masuda, T. Misawa, T. Takamatsu, Kyoto Univ. (Japan); K. Yamauchi, Tokyo Institute of Technology (Japan); Y. Takahashi, S. Shiroya, Kyoto Univ. (Japan); E. Hotta, Tokyo Institute of Technology (Japan); M. Ohnishi, H. Osawa, Kansai Univ. (Japan)
- 65531T **Development of NQR explosive detector in Japan** [6553-62]
H. Itozaki, Osaka Univ. (Japan) and National Institute for Materials Science (Japan); G. Ota, Osaka Univ. (Japan); M. Tachiki, D. He, National Institute for Materials Science (Japan)
- 65531W **Development of SPME-HPLC methodology for detection of nitroexplosives** [6553-65]
S. L. Peña-Luengas, J. I. Jerez-Rozo, S. N. Correa, N. E. Peña, S. P. Hernández-Rivera, Univ. de Puerto Rico Mayagüez (Puerto Rico)
- 65531X **Angular and intensity dependence of NQR remote explosive detection** [6553-84]
G. Ota, H. Itozaki, Osaka Univ. (Japan)

SESSION 14 SIGNAL PROCESSING I: FUSION

- 65531Y **Managing landmine detection sensors: results from application to AMDS data** [6553-66]
M. P. Kolba, L. M. Collins, Duke Univ. (USA)
- 65531Z **Landmine-detection prescreeners based on feature-level fusion of SAR and HSI data** [6553-67]
K. Ranney, Army Research Lab. (USA)
- 655320 **Confidence level fusion of edge histogram descriptor, hidden Markov model, spectral correlation feature, and NUKEv6** [6553-68]
K. C. Ho, Univ. of Missouri, Columbia (USA); P. D. Gader, Univ. of Florida (USA); H. Frigui, Univ. of Louisville (USA); J. N. Wilson, Univ. of Florida (USA)
- 655321 **Context-dependent fusion for landmine detection with ground-penetrating radar** [6553-69]
H. Frigui, L. Zhang, Univ. of Louisville (USA); P. Gader, Univ. of Florida (USA); D. Ho, Univ. of Missouri (USA)
- 655322 **Use of the Borda count for landmine discriminator fusion** [6553-70]
J. N. Wilson, P. D. Gader, Univ. of Florida (USA)
- 655323 **Land mine detection applying holographic neural technology (HNeT)** [6553-88]
J. G. Sutherland, AND Corp. (Canada); W. C. Radzelovage, Raytheon Integrated Defense Systems (USA)

SESSION 15 SIGNAL PROCESSING II

- 655325 **Ground bounce tracking for landmine detection using a sequential Monte Carlo method** [6553-72]
L. Tang, P. A. Torrione, C. Eldeniz, L. M. Collins, Duke Univ. (USA)
- 655326 **Soil compensation techniques for the detection of buried metallic objects using electromagnetic sensors** [6553-87]
L. R. Pasion, Univ. of British Columbia (Canada) and Sky Research Inc. (Canada);
D. W. Oldenburg, Univ. of British Columbia (Canada); S. D. Billings, Sky Research Inc. (Canada); D. Sinex, Univ. of British Columbia (Canada)
- 655327 **Feature learning for a hidden Markov model approach to landmine detection** [6553-74]
X. Zhang, P. Gader, Univ. of Florida (USA); H. Frigui, Univ. of Louisville (USA)
- 655328 **Visual detection, recognition, and classification of surface-buried UXO based on soft-computing decision fusion** [6553-75]
A. Shirkhodaie, H. Rababaah, Tennessee State Univ. (USA)

SESSION 16 SIGNAL PROCESSING III

- 655329 **Image segmentation techniques for improved processing of landmine responses in ground-penetrating radar data** [6553-76]
P. A. Torrione, L. Collins, Duke Univ. (USA)
- 65532A **Landmine detection using discrete hidden Markov models with Gabor features** [6553-77]
H. Frigui, O. Missaoui, Univ. of Louisville (USA); P. Gader, Univ. of Florida (USA)
- 65532B **Landmine discrimination using the Kullback-Leibler distance** [6553-78]
J. N. Wilson, Univ. of Florida (USA)
- 65532C **Application of a modified FFT approach to the subsurface scattering problem** [6553-79]
Y. Gryazin, Y. Chen, W. Zhu, Idaho State Univ. (USA)
- 65532D **Development of region processing algorithm for HSTAMIDS: status and field test results** [6553-80]
P. Ngan, S. Burke, R. Cresci, U.S. Army RDECOM CERDEC (USA); J. N. Wilson, P. Gader, Univ. of Florida (USA); K. C. Ho, Univ. of Missouri, Columbia (USA); E. Bartosz, H. Duvoisin, L-3 Communications CyTerra Corp. (USA)
- 65532E **CA-CFAR detection against K-distributed clutter in GPR** [6553-81]
Y. Bahadırlar, M. Sezgin, Information Technologies Institute (Turkey)

Introduction

The expedient detection of mines and other explosive objects is an ongoing military need. In the terrestrial realm, hastily scattered and buried minefields can be a major impediment to military operations. For this reason the remote detection of minefields is a key to the implementation of new Army war-fighting doctrine based on rapid movement. Detection of mines to address naval doctrine in the marine environment, whether in the surf zone, near-shore region, or in deep water, is also a continuing technical challenge.

During the last decade, the use of mines as effective defensive weapons and as an inexpensive terrorist alternative has proliferated worldwide. As a result, the detection of mines and minefields has become an important topic, not just because of its military-related applications, but also for its humanitarian and environmental impacts. It is relatively easy to lay a minefield but very dangerous, costly, and time-consuming to localize and to clear it. In the humanitarian context, the threat of a minefield is that it remains active and in place for a very long time, generally outlasting any minefield documentation. Unexploded ordnance presents a hazard for military operations during and after conflicts, as well as a tremendous environmental liability on lands where it is present as the legacy of decades of testing and training. It is very important, therefore, to directly address these issues in a broad forum.

The detection of mines/minefields, other explosive objects such as improvised explosive devices, and unexploded ordnance is a challenging problem because of the variability in target shape and size, material, color, and backgrounds, and because they can undergo changes once deployed. In general, mine detection is hampered by problems of low detector signal under common environmental conditions. Detection frequently occurs in the presence of significant amounts of both natural and anthropogenic clutter. In order to increase the effectiveness of mine detection, it is essential to develop technically superior sensor modalities, better understand environmental effects on sensors, implement innovative uses of sensors, and enhance sensor fusion and data fusion capabilities.

The papers in this volume discuss current research and development activities related to the sensing, detection, and remediation of mines and related explosive objects.
