Volume 6687

Proceedings of SPIE, 0277-786X, v. 6687

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers included in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. The papers published in these proceedings reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from this book:

Copying of material in this book for internal or personal use, or for the internal or personal use of specific clients, beyond the fair use provisions granted by the U.S. Copyright Law is authorized by SPIE subject to payment of copying fees. The Transactional Reporting Service base fee for this volume is \$18.00 per article (or portion thereof), which should be paid directly to the Copyright Clearance Center (CCC), 222 Rosewood Drive, Danvers, MA 01923. Payment may also be made electronically through CCC Online at copyright.com. Other copying for republication, resale, advertising or promotion, or any form of systematic or multiple reproduction of any material in this book is prohibited except with permission in writing from the publisher. The CCC fee code is 0277-786X/07/\$18.00.

Printed in the United States of America.

Publication of record for individual papers is online in the SPIE Digital Library.

SPIEDigitalLibrary.org

Paper Numbering: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print and on CD-ROM. Papers are published as they are submitted and meet publication criteria. A unique, consistent, permanent citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages. Numbers in the index correspond to the last two digits of the six-digit CID number.

JWST

6687 03	Technology demonstration of large stable cryogenic composite structures for JWST [6687-02] C. Atkinson, J. Arenberg, L. Gilman, Northrop Grumman (USA); T. Messer, P. May, D. Moon, K. Patton, J. York, S. Backovsky, J. Tucker, M. Bluth, ATK Space Systems (USA); B. Saif, Space Telescope Science Institute (USA); R. Keski-Kuha, NASA Goddard Space Flight Ctr. (USA); J. Kegley, NASA Marshall Space Flight Ctr. (USA); B. Eegholm, Swales Aerospace (USA)
6687 04	Development of electronic speckle pattern interferometry for testing JWST composite structures [6687-03] B. Saif, Space Telescope Science Institute (USA); M. Bluth, ATK Space Systems (USA); B. Eegholm, P. Greenfield, W. Hack, Space Telescope Science Institute (USA); R. Keski-Kuha, P. Blake, NASA Goddard Space Flight Ctr. (USA)
6687 05	Measurement of structural damping in the backplane of the James Webb Space Telescope [6687-04] N. Abbruzzese, J. Arenberg, Northrop Grumman Space Technology (USA)
6687 06	End-to-end commissioning demonstration of the James Webb Space Telescope [6687-05] D. S. Acton, T. Towell, J. Schwenker, D. Shields, E. Sabatke, A. R. Contos, K. Hansen, Ball Aerospace & Technologies Corp. (USA); F. Shi, Jet Propulsion Lab. (USA); B. Dean, S. Smith, NASA Goddard Space Flight Ctr. (USA)
6687 07	Using multifield measurements to eliminate alignment degeneracies in the JWST testbed telescope [6687-06] E. Sabatke, S. Acton, J. Schwenker, T. Towell, L. Carey, D. Shields, A. Contos, Ball Aerospace (USA); D. Leviton, NASA Goddard Space Flight Ctr. (USA)
6687 08	TRL-6 for JWST wavefront sensing and control [6687-07] L. D. Feinberg, B. H. Dean, D. L. Aronstein, C. W. Bowers, W. Hayden, R. G. Lyon, R. Shiri, J. S. Smith, NASA Goddard Space Flight Ctr. (USA); D. S. Acton, L. Carey, A. Contos, E. Sabatke, J. Schwenker, D. Shields, T. Towell, Ball Aerospace & Technologies Corp. (USA); F. Shi, Jet Propulsion Lab. (USA); L. Meza, Northrop Grumman Space Technology (USA)

- 6687 09 **Microshutter array system for James Webb Space Telescope** [6687-08]
M. J. Li, NASA Goddard Space Flight Ctr. (USA); T. Adachi, The Catholic Univ. of America (USA); C. A. Allen, S. R. Babu, NASA Goddard Space Flight Ctr. (USA); S. Bajikar, MEI Technologies (USA); M. A. Beamesderfer, NASA Goddard Space Flight Ctr. (USA); R. Bradley, Sigma Space Co. (USA); N. P. Costen, K. Denis, MEI Technologies (USA); A. J. Ewin, D. Franz, NASA Goddard Space Flight Ctr. (USA); L. Hess, R. Hu, MEI Technologies (USA); K. Jackson, Swales Aerospace Co. (USA); M. D. Jhabvala, NASA Goddard Space Flight Ctr. (USA); D. Kelly, MEI Technologies (USA); T. King, NASA Goddard Space Flight Ctr. (USA); G. Kletetschka, The Catholic Univ. of America (USA); A. S. Kutyrev, Global Space Technology Co. (USA); B. A. Lynch, MEI Technologies (USA); S. E. Meyer, NASA Goddard Space Flight Ctr. (USA); T. Miller, MEI Technologies (USA); S. H. Moseley, NASA Goddard Space Flight Ctr. (USA); V. Mikula, The Catholic Univ. of America (USA); B. Mott, NASA Goddard Space Flight Ctr. (USA); L. Oh, MEI Technologies (USA); J. T. Pontius, NASA Goddard Space Flight Ctr. (USA); D. A. Rapchun, Global Space Technology Co. (USA); C. Ray, MEI Technologies (USA); S. Schwinger, P. K. Shu, R. Silverberg, NASA Goddard Space Flight Ctr. (USA); W. W. Smith, S. Snodgrass, MEI Technologies (USA); D. Sohl, L. Sparr, R. Steptoe-Jackson, R. J. Thate, NASA Goddard Space Flight Ctr. (USA); F. Wang, MEI Technologies (USA); L. Wang, Sigma Space Co. (USA); Y. Zheng, NASA Goddard Space Flight Ctr. (USA); C. Zincke, MEI Technologies (USA)

INTERFEROMETRY I

- 6687 0A **System engineering the Space Infrared Interferometric Telescope (SPIRIT)** [6687-09]
T. T. Hyde, D. T. Leisawitz, D. A. Di Pietro, S. A. Rinehart, NASA Goddard Space Flight Ctr. (USA)
- 6687 0B **The Space Infrared Interferometric Telescope (SPIRIT): optical system design considerations** [6687-10]
M. E. Wilson, D. Leisawitz, A. J. Martino, S. Rinehart, J. Crooke, J. Tveekrem, J. Budinoff, T. Hyde, NASA Goddard Space Flight Ctr. (USA)
- 6687 0C **Mechanical design of the Space Infrared Interferometric Telescope (SPIRIT)** [6687-11]
J. G. Budinoff, D. Leisawitz, B. Taylor, D. Jones, NASA Goddard Space Flight Ctr. (USA)
- 6687 0D **The SPIRIT thermal system** [6687-12]
M. DiPirro, NASA Goddard Space Flight Ctr. (USA); C. Cottingham, Lockheed Martin Corp. (USA); R. Boyle, S. Ollendorf, D. Leisawitz, NASA Goddard Space Flight Ctr. (USA)
- 6687 0E **Cryogenic far-infrared detectors for the Space Infrared Interferometric Telescope (SPIRIT)** [6687-44]
D. J. Benford, S. A. Rinehart, D. T. Leisawitz, T. T. Hyde, NASA Goddard Space Flight Ctr. (USA)

INTERFEROMETRY II

- 6687 OF **The wide-field imaging interferometry testbed: enabling techniques for high angular resolution astronomy** [6687-13]
S. A. Rinehart, NASA Goddard Space Flight Ctr. (USA); T. Armstrong, Naval Research Lab. (USA); B. J. Frey, J. Jung, NASA Goddard Space Flight Ctr. (USA); J. Kirk, Orbital Space Systems (USA); D. T. Leisawitz, D. B. Leviton, R. Lyon, NASA Goddard Space Flight Ctr. (USA); S. Maher, SSAI (USA); A. J. Martino, NASA Goddard Space Flight Ctr. (USA); T. Pauls, Naval Research Lab. (USA)
- 6687 OG **Direct UV/optical imaging of stellar surfaces: the Stellar Imager Vision Mission** [6687-14]
K. G. Carpenter, R. G. Lyon, NASA-GSFC (USA); C. Schrijver, LMATC (USA); M. Karovska, SAO (USA); D. Mozurkewich, Seabrook Engineering (USA)
- 6687 OH **Wavefront sensing and closed-loop control for the Fizeau interferometry testbed** [6687-15]
R. G. Lyon, K. G. Carpenter, A. Liu, NASA Goddard Space Flight Ctr. (USA); P. Petrone, P. Dogoda, D. Reed, Sigma Space (USA); D. Mozurkewich, Seabrook Engineering (USA)
- 6687 OI **Fresnel interferometric arrays for space-based imaging: testbed results** [6687-16]
D. Serre, L. Koechlin, P. Deba, Lab. d'Astrophysique de Toulouse et Tarbes, Observatoire Midi-Pyrénées, CNRS, Univ. Paul Sabatier Toulouse (France)
- 6687 OJ **An optical model of the wide-field imaging interferometry testbed** [6687-43]
D. Leisawitz, A. J. Martino, NASA Goddard Space Flight Ctr. (USA); A. K. Thompson, ATK Space (USA); S. A. Rinehart, B. J. Frey, NASA Goddard Space Flight Ctr. (USA)
- 6687 OK **Beam combination for Stellar Imager and its application to full-aperture imaging** [6687-45]
D. Mozurkewich, Seabrook Engineering (USA); K. G. Carpenter, R. G. Lyon, NASA Goddard Space Flight Ctr. (USA)

SYSTEMS AND CONCEPTS

- 6687 OL **Ares V launch capability enables future space telescopes** [6687-17]
H. P. Stahl, NASA Marshall Space Flight Ctr. (USA)
- 6687 OM **Large infrared telescopes in the exploration era: SAFIR** [6687-18]
D. Lester, Univ. of Texas, Austin (USA); J. Budinoff, NASA Goddard Space Flight Ctr. (USA); C. Lillie, Northrop Grumman Space Technology (USA)
- 6687 ON **A decision-making framework to determine the value of serviceability in space telescopes** [6687-19]
M. Baldesarra, D. W. Miller, Massachusetts Institute of Technology (USA)
- 6687 OO **Instrumentation for the next-generation cryogenic spaceborne far-IR observatories** [6687-20]
C. M. Bradford, P. F. Goldsmith, M. Dragovan, M. Kenyon, W. Holmes, H. Yorke, Jet Propulsion Lab. (USA)
- 6687 OP **CALISTO: a cryogenic far-infrared/submillimeter observatory** [6687-21]
P. F. Goldsmith, C. M. Bradford, M. Dragovan, B. Khayatian, K. Huppenberger, I. J. O'Dwyer, K. Górski, H. W. Yorke, J. Zmuidzinas, C. Paine, C. Satter, R. Lee, Jet Propulsion Lab. (USA)

- 6687 0Q **DESTINY: the dark energy space telescope** [6687-22]
B. A. Pasquale, NASA Goddard Space Flight Ctr. (USA); R. A. Woodruff, Lockheed Martin Space Systems (USA); T. R. Lauer, National Optical Astronomy Observatory (USA);
D. J. Benford, NASA Goddard Space Flight Ctr. (USA)

TELESCOPES AND MIRRORS I

- 6687 0S **Comparison of on-axis three-mirror-anastigmat telescopes** [6687-23]
M. Lampton, M. Sholl, Univ. of California, Berkeley (USA)
- 6687 0T **Manufacturing and control of the aspherical mirrors for the telescope of the French satellite Pleiades** [6687-24]
D. Fappani, H. Ducollet, Société Européenne de Systèmes Optiques (France)
- 6687 0U **Unique space telescope concepts using CFRP composite thin-shelled mirrors and structures** [6687-25]
R. C. Romeo, R. N. Martin, Composite Mirror Applications (USA)

TELESCOPES AND MIRRORS II

- 6687 0W **Primary mirror shape control for athermalization using embedded sensors** [6687-27]
E. Jordan, D. W. Miller, MIT Space Systems Lab. (USA)
- 6687 0X **Integrated modeling of point-spread function stability of the SNAP telescope** [6687-28]
R. W. Besuner, Lawrence Berkeley National Lab. (USA); M. J. Sholl, Univ. of California, Berkeley (USA); M. D. Lieber, M. L. Kaplan, Ball Aerospace & Technologies Corp. (USA)
- 6687 0Y **Thermal calculation and structure analysis of space Main Optical Telescope** [6687-48]
Z. Chen, Hangzhou Dianzi Univ. (China) and National Astronomical Observatories (China);
Z. Chen, S. Yang, National Astronomical Observatories (China); H. Shi, Hangzhou Dianzi Univ. (China) and National Astronomical Observatories (China)

WAVEFRONT SENSING AND CONTROL (WFSC)

- 6687 0Z **Dynamic wavefront control for lightweight mirrors in space telescopes** [6687-29]
L. E. Cohan, D. W. Miller, Massachusetts Institute of Technology (USA)
- 6687 10 **Adaptive cross-correlation algorithm and experiment of extended scene Shack-Hartmann wavefront sensing** [6687-30]
E. Sidick, R. M. Morgan, J. J. Green, C. M. Ohara, D. C. Redding, Jet Propulsion Lab. (USA)
- 6687 11 **Co-adding techniques for image-based wavefront sensing for segmented-mirror telescopes** [6687-49]
J. S. Smith, D. L. Aronstein, B. H. Dean, NASA Goddard Space Flight Ctr. (USA); D. S. Acton, Ball Aerospace & Technologies Corp. (USA)

TPF EXTERNAL OCCULTER I

- 6687 12 **External occulters for direct observation of exoplanets: an overview (Invited Paper)** [6687-31]
W. Cash, E. Schindhelm, Univ. of Colorado (USA); J. Arenberg, A. Lo, R. Polidan, Northrop Grumman Space Technology (USA); J. Kasdin, R. Vanderbei, Princeton Univ. (USA); S. Kilston, C. Noecker, Ball Aerospace (USA)
- 6687 13 **The terrestrial planet finder-occulter (TPF-O) science program (Invited Paper)** [6687-32]
S. R. Heap, NASA Goddard Space Flight Ctr. (USA)
- 6687 14 **TPF-O design reference mission** [6687-33]
D. J. Lindler, Sigma Space Corp. (USA)

TPF EXTERNAL OCCULTER II

- 6687 16 **New worlds observer optical performance** [6687-34]
A. S. Lo, T. Glassman, C. F. Lillie, P. J. McGraw, Northrop Grumman Corp. (USA)
- 6687 17 **A UV/optical telescope for the New Worlds Observer mission** [6687-35]
C. F. Lillie, D. Dailey, A. S. Lo, R. S. Polidan, Northrop Grumman Space Technology (USA)
- 6687 18 **Conceptual design of the TPF-O SC buses** [6687-36]
L. R. Purves, NASA GSFC (USA)
- 6687 19 **Externally occulted terrestrial planet finder coronagraph: simulations and sensitivities** [6687-37]
R. G. Lyon, S. Heap, NASA Goddard Space Flight Ctr. (USA); A. Lo, Northrop Grumman (USA); W. Cash, Univ. of Colorado, Boulder (USA); G. D. Starkman, Case Western Reserve Univ. (USA); R. J. Vanderbei, N. J. Kasdin, Princeton Univ. (USA); C. J. Copi, Case Western Reserve Univ. (USA)
- 6687 1A **New Worlds Observer tolerance overview** [6687-46]
A. Shipley, W. Cash, Univ. of Colorado (USA); J. W. Arenberg, A. S. Lo, Northrop Grumman Space Technology (USA)
- 6687 1B **White-light demonstration of one hundred parts per billion irradiance suppression in air by new starshade occulters** [6687-50]
D. B. Leviton, NASA Goddard Space Flight Ctr. (USA); W. C. Cash, B. Gleason, M. J. Kaiser, S. A. Levine, Univ. of Colorado, Boulder (USA); A. S. Lo, Northrop Grumman Space Technology (USA); E. Schindhelm, A. F. Shipley, Univ. of Colorado, Boulder (USA)

FORMATION FLYING

- 6687 1D **Formation flying system design for a planet-finding telescope-occultor system** [6687-39]
J. Leitner, NASA GSFC (USA)

- 6687 1E **Formation control and reconfiguration through synthetic imaging formation flying testbed (SIFFT)** [6687-40]
S. Mohan, MIT Space Systems Lab. (USA); H. Sakamoto, Nihon Univ. (Japan); D. W. Miller, MIT Space Systems Lab. (USA)
- 6687 1F **Satellite formation flight and realignment maneuver demonstration aboard the International Space Station** [6687-41]
C. P. Mandy, A. Saenz-Otero, D. W. Miller, MIT Space Systems Lab. (USA)

 Daniel R. Coulter, Jet Propulsion Laboratory (USA)

Introduction

As described in the Call for Papers, the purpose of this conference was to seek “papers that discuss highly innovative, indeed radical, space telescope technologies and concepts for new telescopes that do not fall within conventional categories”. Papers received fell within a few broad categories, and are presented in that manner in this volume. To provide a grounding in what is probably the most significant new space telescope system, the conference opened with a session describing the current status of important elements of the James Webb Space Telescope (JWST). Two sessions were then devoted to means for using interferometry in space telescopes, both in the context of specific mission and system concepts and in general, underlying technology terms. The following four sessions considered general technologies and concepts from which future systems can be expected to emerge; these included possible supporting infrastructure developments, introductory descriptions of several new system concepts, telescope and mirror technologies, and wavefront sensing and control. The conference concluded with a Joint Session with Conference 6693: Techniques and Instrumentation for Detection of Exoplanets III. This Joint Session addressed three principal topic areas:

- Description of the mission concept, science requirements, and enabling technologies for the New Worlds Observer (NWO) terrestrial planet finder, also known as the Terrestrial Planet Finder – Occulter (TPF-O).
- Recent developments in space-borne formation flying, needed for the TPF-O and other missions such as the Terrestrial Planet Finder – Interferometer (TPF-I).
- An introductory overview of the current status of the TPF-I mission concept.
