Proceedings of SPIE, 0277-786X, v. 6801

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers included in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. The papers published in these proceedings reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Paper Numbering: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print and on CD-ROM. Papers are published as they are submitted and meet publication criteria. A unique, consistent, permanent citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages. Numbers in the index correspond to the last two digits of the six-digit CID number.

Introduction

This conference on Photonics: Design, Technology, and Packaging is part of the SPIE 2007 symposium on Microelectronics, MEMS, and Nanotechnology held at The Manning Clark Centre, Australian National University (ANU), Canberra, 4–7 December 2007. Four other parallel conferences were held as part of this symposium, as follows: (i) Microelectronics: Design, Technology, and Packaging, (ii) BioMEMS and Nanotechnology, (iii) Device and Process Technologies for Microelectronics, MEMS, Photonics, and Nanotechnology, and (iv) Complex Systems.

The papers in these proceedings represent some of the latest research issues in bandgap materials and devices, photonic structures, nonlinear optics and plasmonics. In order to comply with the requirements of some institutions, the authors were able to have their full manuscripts peer reviewed by the international conference committee and other experts in the relevant fields.

A big thanks to the symposium chairs, Tiziana Di Matteo (Australian National University) and Vijay K. Varadan (University of Arkansas) for their splendid work. A special thanks to our program committee for their support and labors. Finally, our appreciation must go to the authors for sharing their work, the attendees for their stimulating questions, and both the authors and attendees for their enthusiasm. The resulting interaction made this a most productive and enjoyable conference.
