Paper Numbering: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print and on CD-ROM. Papers are published as they are submitted and meet publication criteria. A unique, consistent, permanent citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages. Numbers in the index correspond to the last two digits of the six-digit CID number.

Introduction

Welcome to the Security, Steganography, and Watermarking of Multimedia Contents Conference! This is our 10th year of watermarking and multimedia security! More than 50 papers from more than 15 countries were presented at this year's conference.

The goal of the conference, as always, was to provide a forum for the discussion of issues in multimedia security. We had papers that addressed protecting audio, image, and video content, along with many interesting papers in cryptography and applications.

As we say every year, we have come a long way in protecting our "digital future," but we still have a lot of work to do. We would like to thank the Program Committee for their help in reviewing the papers and their advice on the final program.

We look forward to seeing you in 2009 in San Jose!
