Volume 6884

Proceedings of SPIE, 0277-786X, v. 6884

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers included in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. The papers published in these proceedings reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from this book:

Copying of material in this book for internal or personal use, or for the internal or personal use of specific clients, beyond the fair use provisions granted by the U.S. Copyright Law is authorized by SPIE subject to payment of copying fees. The Transactional Reporting Service base fee for this volume is \$18.00 per article (or portion thereof), which should be paid directly to the Copyright Clearance Center (CCC), 222 Rosewood Drive, Danvers, MA 01923. Payment may also be made electronically through CCC Online at copyright.com. Other copying for republication, resale, advertising or promotion, or any form of systematic or multiple reproduction of any material in this book is prohibited except with permission in writing from the publisher. The CCC fee code is 0277-786X/08/\$18.00.

Printed in the United States of America.

Publication of record for individual papers is online in the SPIE Digital Library.

SPIEDigitalLibrary.org

Paper Numbering: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print and on CD-ROM. Papers are published as they are submitted and meet publication criteria. A unique, consistent, permanent citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages. Numbers in the index correspond to the last two digits of the six-digit CID number.

ix	Introduction
xi	A Tribute to Peter Basque [1960–2007]

PLENARY PAPER

6884 02	MEMS reliability: coming of age [6884-30] M. R. Douglass, Texas Instruments (USA)
---------	---

SESSION 1 MEMS RELIABILITY

6884 03	Understanding and improving longevity in RF MEMS capacitive switches (Invited Paper) [6884-01] C. Goldsmith, D. Forehand, D. Scarbrough, MEMtronics Corp. (USA); Z. Peng, C. Palego, J. Hwang, Lehigh Univ. (USA); J. Clevenger, Exponent (USA)
6884 04	Experimental study of electrical breakdown in MEMS devices with micrometer scale gaps [6884-02] P. Carazzetti, Ph. Renaud, H. R. Shea, Ecole Polytechnique Fédérale de Lausanne (Switzerland)
6884 05	Degradation evaluation of microelectromechanical thermal actuators [6884-03] J. K. Luo, Univ. of Bolton (United Kingdom); Y. Q. Fu, Univ. of Cambridge (United Kingdom); Q. A. Huang, Southeast Univ. (China); J. A. Williams, W. I. Milne, Univ. of Cambridge (United Kingdom)

SESSION 2 MEMS/MNT ANALYTICAL TECHNIQUES

6884 07	Development of nondestructive testing/evaluation methodology for MEMS [6884-06] J. L. Zunino III, D. R. Skelton, U.S. Army RDE Command (USA); R. T. Marinis, A. R. Klemptner, P. Hefti, R. J. Pryputniewicz, Worcester Polytechnic Institute (USA)
6884 08	Measurement of thin films and interfacial surface roughness using SWLI [6884-07] M. Conroy, Taylor Hobson (United Kingdom)
6884 09	Reliability of MEMS devices in shock and vibration overload situations [6884-08] S. Kurth, Fraunhofer Institute for Reliability and Micro Integration (Germany); A. Shaporin, K. Hiller, C. Kaufmann, Chemnitz Univ. of Technology (Germany); T. Gessner, Fraunhofer Institute for Reliability and Micro Integration (Germany)
6884 0A	Mechanics of the dynamic release process for stiction failed microcantilever beams using structural vibrations [6884-29] A. Savkar, K. D. Murphy, Univ. of Connecticut (USA)

SESSION 3 MEMS IN HOMELAND SECURITY AND SPACE APPLICATIONS

- 6884 0B **A perspective on the reliability of MEMS-based components for telecommunications (Keynote Paper)** [6884-09]
J. C. McNulty, DfR Solutions LLC (USA)
- 6884 0C **Reliability testing and analysis of safing and arming devices for army fuzes** [6884-10]
J. L. Zunino III, D. R. Skelton, C. Robinson, U.S. Army RDE Command (USA)
- 6884 0D **Interferometric characterization of MOEMS devices in cryogenic environment for astronomical instrumentation** [6884-11]
F. Zamkotsian, E. Grassi, Lab. d'Astrophysique de Marseille (France); S. Waldis, Univ. of Neuchatel (Switzerland); R. Barette, P. Lanzoni, C. Fabron, Lab. d'Astrophysique de Marseille (France); W. Noell, N. de Rooij, Univ. of Neuchatel (Switzerland)
- 6884 0E **Qualification testing of engineering camera and platinum resistance thermometer (PRT) sensors for Mars Science Laboratory (MSL) project under extreme temperatures to assess reliability and to enhance mission assurance** [6884-12]
R. Ramesham, J. N. Maki, G. C. Cucullu, Jet Propulsion Lab. (USA)

SESSION 4 MEMS ASSEMBLY

- 6884 0F **Measuring MEMS through silicon caps (Invited Paper)** [6884-13]
M. Hazel, M. Karpman, Analog Devices, Inc. (USA)
- 6884 0G **Characterization of microresistance welding with electrothermal actuator for microassembly** [6884-14]
C.-W. Chang, W. Hsu, National Chiao Tung Univ. (Taiwan)
- 6884 0H **Study of Ag-In solder as low temperature wafer bonding intermediate layer** [6884-15]
R. I. Made, C. L. Gan, Nanyang Technological Univ. (Singapore); C. Lee, Institute of Microelectronics (Singapore) and National Univ. of Singapore (Singapore); L. L. Yan, A. Yu, S. W. Yoon, J. H. Lau, Institute of Microelectronics (Singapore)
- 6884 0I **Microfabricated implantable pressure sensor for flow measurement** [6884-15]
S. Liu, R. Farrow, New Jersey Institute of Technology (USA); J. L. Zunino III, U.S. Army ARDEC (USA); H. C. Lim, J. Federici, G. Thomas, New Jersey Institute of Technology (USA)
- 6884 0J **Photosensitive etch protection coating for silicon wet-etch applications** [6884-17]
J. Dalvi-Malhotra, X. F. Zhong, C. Planje, Brewer Science, Inc. (USA)

SESSION 5 MEMS PACKAGING

- 6884 0K **MEMS as low-cost high-volume semiconductor solutions: it's all in the packaging and assembly (Keynote Paper)** [6884-18]
J. Brown, M. Lutz, A. Partridge, P. Gupta, E. Radza, SiTime (USA)
- 6884 0L **Measuring mass flows in hermetically sealed MEMS and MOEMS to ensure device reliability** [6884-19]
R. C. Kullberg, D. J. Rossiter, Oneida Research Services, Inc. (USA)

- 6884 OM **A new model for vacuum quality and lifetime prediction in hermetic vacuum bonded MEMS** [6884-20]
A. Bonucci, S. Guadagnuolo, A. Caterino, A. Conte, M. Moraja, SAES Getters S.p.A. (Italy)
- 6884 OO **Challenges of designing and processing extreme low-G microelectromechanical system (MEMS) accelerometers** [6884-22]
T. P. Swiler, U. Krishnamoorthy, P. J. Clews, M. S. Baker, D. M. Tanner, Sandia National Labs. (USA)
- 6884 OP **Low-temperature vacuum hermetic wafer-level package for uncooled microbolometer FPAs** [6884-23]
S. Garcia-Blanco, P. Topart, Y. Desroches, J.S. Caron, F. Williamson, C. Alain, H. Jerominek, INO (Canada)

SESSION 6 MEMS CHARACTERIZATION AND SIMULATION

- 6884 OR **Electrical measurement of undercut in surface micromachining** [6884-25]
S. Bhat, E. Bhattacharya, Indian Institute of Technology Madras (India)
- 6884 OS **Support for microsystems simulation: Are we watching the clock?** [6884-27]
C. K. Drummond, ASM International (USA); F. J. Lisy, Orbital Research, Inc. (USA)
- 6884 OT **Confocal microscopy scanned by digital micromirror device with stray light filters** [6884-28]
C.-C. Hung, Kao Yuan Univ. (Taiwan); C.-C. Lin, K.-M. Yeh, Metal Industries Research and Development Ctr. (Taiwan); Y.-C. Fang, J.-H. Wu, H.-C. Sun, W.-C. Lai, Y.-L. Chen, Kaohsiung First Univ. of Science and Technology (Taiwan)

POSTER SESSION

- 6884 OU **Uncertainty analysis on optical testing with a Shack-Hartmann sensor and a point source** [6884-26]
D. W. Kang, J. S. Lee, Yonsei Univ. (South Korea); H.-S. Yang, Korea Research Institute of Standards and Science (South Korea); J. W. Hahn, Yonsei Univ. (South Korea)

- Reliability Panel Discussion
Jason O. Clevenger, *Moderator*, Exponent Inc. (USA)
Michael R. Douglass, *Panelist*, Texas Instruments (USA)
Herbert R. Shea, *Panelist*, Ecole Polytechnique Fédérale de Lausanne
(Switzerland)

Introduction

The reliability, packaging, testing, and characterization of MEMS/MOEMS are of paramount importance to the commercialization of these advanced and useful emerging technologies. This was the International Reliability Conference and the contributors at this conference were from Switzerland, India, United Kingdom, Israel, Canada, Germany, Taiwan, Singapore, Italy, South Korea, and the United States. The main objective of this one and only premier reliability conference was to provide a technical forum for in-depth investigations and interdisciplinary discussions involving reliability, packaging, testing, and characterization of MEMS/MOEMS. The response to the call for papers was awesome and technically rewarding to the MEMS/MOEMS and other communities.

This seventh conference on Reliability, Packaging, Testing, and Characterization of MEMS/MOEMS was sponsored by SPIE as a part of the Photonics West 2008 meeting. The conference was a part of the MOEMS-MEMS 2008 Micro-Nano Fabrication symposium and education program on MOEMS-MEMS, and was held 20–25 January 2008 at the San Jose Convention Center, San Jose, California, USA. SPIE is the premier international forum for presentation of the latest developments associated with MEMS and MOEMS including reliability, testing, packaging, materials, surfaces, and characterization.

In preparing for the conference, 28 high-quality papers were received from various countries. Seven long sessions covered MOEMS-MEMS plenary presentations, MEMS reliability, MEMS/MNT analytical applications, MEMS in homeland security and space applications, MEMS assembly, MEMS packaging, and MEMS characterization and simulation. We put together a technical program that had three plenary speakers and four invited/keynote speakers from various reputed laboratories around the country and globe, and a plenary speaker from Texas Instruments on DMD reliability. We also arranged, for the second consecutive year, a popular panel discussion on MEMS reliability that takes place during the conference.

We would like to personally thank Dr. Jason Clevenger, Dr. Danelle Tanner, Mr. Richard Kullberg, Dr. Herbert Shea, as well as Dr. Al Henning and Dr. Thomas Suleski (symposium chair and cochair) for their unstinted timely support and encouragement. Finally, we would like to thank all the session chairs and cochairs and program committee members for their support in successfully organizing this conference. We thank all the participants and everyone who attended this conference.

Allyson L. Hartzell
Rajeshuni Ramesham

A Tribute to Peter Basque (1960-2007)

Peter Basque died suddenly on Saturday, November 3, 2007 at the age of 47. Peter was an active committee member of the SPIE Reliability, Packaging, Testing, and Characterization conference at Photonics West, and was a Reliability Discussion Panelist in 2007. He worked for Analog Devices as the North American Reliability Manager from 2006–2007, and as the Reliability Manager of Analog's MEMS Micromachined Products Division from 1999–2006. He was the Reliability Manager at Intel's Hudson, MA semiconductor plant from 1994–1998, worked in reliability physics for Digital Equipment Corporation from 1988–1994, and was a Components Engineer at United Technologies Norden Systems (1984–1988). Peter was a member of several professional organizations including IEEE, AEC (Associate Technical Committee Member) and was the former Chairman of JEDEC. He graduated from the University of Massachusetts, Lowell in 1984 and received a Bachelor of Science in Electrical Engineering.

Peter published with the MEMS Industry Group (MIG) on reliability testing of Analog Devices MEMS products in critical applications, in 2003. His expertise included MEMS reliability, MEMS packaging, CMOS circuitry, and device physics. Peter's contributions in the MEMS reliability field were extensive, as he was responsible for the introduction of many new products in the Analog Devices inertial product line (including the gyroscope and tri-axis accelerometer). He worked methodically on MEMS structure capping which allowed plastic packaging of ADI MEMS sensors.

Peter lived by the motto "work hard, play harder." He was born September 5, 1960, in Leominster, Massachusetts, son of the late Norman and Phyllis (Plette) Basque. Norman Basque was the founder of Basque Plastics Corporation in Leominster MA, and one of the co-founders of the National Plastics Center and

Museum in that same town. Peter lived his entire life in Leominster, Massachusetts. He enjoyed spending time with his family, fishing, skiing, and cooking. He leaves his three sons, Justin, Devin, and Brandon Basque, his loving companion, Janet Brack, three granddaughters, Colleen, Taylor, and Zoe Basque; four brothers, Clifford Basque and his wife Jane, Richard Basque and his wife Patricia, Gregory Basque and his wife Donna, Rene Basque and his wife Karen; one sister, Irene Bibby and her husband Keith; his Aunt Gloria and late Uncle Norman Preville, and his Uncle Leo and Aunt Pauline Plette; and, he was the beloved uncle of nineteen nieces and nephews.

Peter will be sorely missed by his friends and colleagues in industry, his large family, and many friends. His contributions to MEMS Reliability will continue to be a foundation for future advancements in this important field.
