Volume 6969

Proceedings of SPIE, 0277-786X, v. 6969

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers included in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. The papers published in these proceedings reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from this book:

Copying of material in this book for internal or personal use, or for the internal or personal use of specific clients, beyond the fair use provisions granted by the U.S. Copyright Law is authorized by SPIE subject to payment of copying fees. The Transactional Reporting Service base fee for this volume is \$18.00 per article (or portion thereof), which should be paid directly to the Copyright Clearance Center (CCC), 222 Rosewood Drive, Danvers, MA 01923. Payment may also be made electronically through CCC Online at copyright.com. Other copying for republication, resale, advertising or promotion, or any form of systematic or multiple reproduction of any material in this book is prohibited except with permission in writing from the publisher. The CCC fee code is 0277-786X/08/\$18.00.

Printed in the United States of America.

Publication of record for individual papers is online in the SPIE Digital Library.

SPIDigitalLibrary.org

Paper Numbering: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print and on CD-ROM. Papers are published as they are submitted and meet publication criteria. A unique, consistent, permanent citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages. Numbers in the index correspond to the last two digits of the six-digit CID number.

Contents

ix	Conference Committee
xi	Introduction

SESSION 1 SIGNAL PROCESSING

- 6969 02 **An advanced missile warning processing suite** [6969-01]
J. B. Montgomery, M&M Aviation (USA); R. B. Sanderson, J. F. McCalmont, Air Force Research Lab. (USA); R. S. Johnson, MacAulay-Brown Inc. (USA); D. J. McDermott, M&M Aviation (USA); M. J. Taylor, General Dynamics (USA)
- 6969 03 **A algorithm benchmark data suite for chemical and biological (chem/bio) defense applications** [6969-02]
M.-A. Slamani, B. Fisk, T. Chyba, ITT Corp. (USA); D. Emge, U.S. Army Edgewood Chemical Biological Ctr. (USA); S. Waugh, Defense Threat Reduction Agency (USA)
- 6969 04 **Chemical detection and classification in Raman spectra** [6969-03]
S. Kay, C. Xu, Univ. of Rhode Island (USA); D. Emge, U.S. Army Edgewood Chemical Biological Ctr. (USA)
- 6969 05 **Detection of small objects in multi-layered infrared images** [6969-04]
J. Wang, S. Bao, J. F. Ralph, J. Y. Goulermas, Univ. of Liverpool (United Kingdom)

SESSION 2 SIGNAL/TRACK PROCESSING

- 6969 06 **Target detection by distributed sensors: distributed sensor concept-DISCO for small target detection** [6969-05]
M. K. Rafailov, Richer Systems, Inc. (USA)
- 6969 07 **Spectral gating in hyperspectral-augmented target tracking** [6969-06]
N. A. Soliman, M. J. Mendenhall, Air Force Institute of Technology (USA); J. R. Vasquez, Numerica Corp. (USA)
- 6969 09 **Optical recognition of biological agents** [6969-42]
C. W. Baumgart, K. D. Linder, J. J. Trujillo, National Nuclear Security Administration (USA)
- 6969 0A **Pixel decomposition for tracking in low resolution videos** [6969-08]
V. Govinda, J. F. Ralph, J. W. Spencer, J. Y. Goulermas, L. Yang, Univ. of Liverpool (United Kingdom); A. M. Abbas, Menoufia Univ. (Egypt)
- 6969 0B **Discriminating small extended targets at sea from clutter and other classes of boats in infrared and visual light imagery** [6969-09]
S. P. van den Broek, H. Bourma, M. A. C. Degache, TNO Defence, Security and Safety (Netherlands)

- 6969 0C **A recurrent velocity filter for detecting large numbers of moving objects** [6969-10]
R. Porter, A. Fraser, R. Loveland, E. Rosten, Los Alamos National Lab. (USA)
- 6969 0D **Feature-aided tracking in the urban environment** [6969-11]
T. A. Lenz, Air Force Institute of Technology (USA); J. R. Vasquez, Numerica Corp. (USA)
- 6969 0E **Robust method for detecting an infrared small moving target based on the facet-based model** [6969-12]
H.-S. Lee, S. Kim, D.-J. Park, Korea Advanced Institute of Science and Technology (South Korea); J. Kim, Agency for Defense Development (South Korea); C. Park, Samsung Thales Co., Ltd. (South Korea)

SESSION 3 TARGET TRACKING

- 6969 0G **Removal of bias due to propagation of estimates through nonlinear mappings** [6969-13]
T. Jorgensen, R. Rothrock, SPARTA, Inc. (USA)
- 6969 0H **Improving multiple target tracking in structured environments using velocity priors** [6969-14]
R. C. Loveland, E. Rosten, R. Porter, Los Alamos National Lab. (USA)
- 6969 0I **Multisensor range-only tracking for a distributed architecture of imaging sensors** [6969-45]
T. L. Homsley, Radiance Technologies, Inc. (USA)
- 6969 0J **Assurance regions in tracking** [6969-16]
D. D. Sworder, Univ. of California, San Diego (USA); J. E. Boyd, Cubic Defense Applications (USA); R. G. Hutchins, Naval Postgraduate School (USA)
- 6969 0K **Spline filter for multidimensional nonlinear/non-Gaussian Bayesian tracking** [6969-17]
K. Punithakumar, McMaster Univ. (Canada); M. McDonald, Defence Research and Development Canada (Canada); T. Kirubarajan, McMaster Univ. (Canada)
- 6969 0M **Differential geometry measures of nonlinearity for the video filtering problem** [6969-49]
M. Mallick, Science Applications International Corp. (USA); B. F. La Scala, Univ. of Melbourne (Australia)

SESSION 4 MULTIPLE SENSOR PROCESSING

- 6969 0N **Game theoretic target assignment approach in ballistic missile defense** [6969-19]
M. Wei, Intelligent Automation, Inc. (USA); G. Chen, DCM Research Resources, LLC (USA); K. Pham, E. Blasch, Air Force Research Lab. (USA); Y. Wu, DCM Research Resources, LLC (USA)
- 6969 0P **Tracking with poorly localized sensors in multistatic sensor networks** [6969-46]
R. Tharmarasa, McMaster Univ. (Canada); T. Lang, General Dynamics Canada (Canada); T. Kirubarajan, McMaster Univ. (Canada)
- 6969 0Q **Integrated bias removal in passive radar systems** [6969-21]
M. Subramaniam, K. Punithakumar, McMaster Univ. (Canada); M. McDonald, Defence Research and Development Canada (Canada); T. Kirubarajan, McMaster Univ. (Canada)

- 6969 OR **Determining the optimal time frame for multisensor track correlation** [6969-22]
L. M. Ehrman, P. D. Burns, W. D. Blair, Georgia Institute of Technology (USA)
- 6969 OS **Accurate 3D rigid-body target motion and structure estimation by using GMTI/HRR with template information** [6969-23]
S. Wu, Sarnoff Corp. (USA); L. Hong, Wright State Univ. (USA)
- 6969 OT **Joint path planning and sensor subset selection for multistatic sensor networks** [6969-24]
R. Tharmarasa, McMaster Univ. (Canada); T. Lang, General Dynamics Canada (Canada); T. Kirubarajan, McMaster Univ. (Canada)
- 6969 OU **Aspect aware UAV localization** [6969-25]
C. R. Berger, S. Zhou, P. Willett, Univ. of Connecticut (USA)
- 6969 OV **Efficiency and sensitivity of methods for assessing ambiguity in data association decisions** [6969-26]
B. D. Kragel, S. M. Herman, N. J. Roseveare, Numerica Corp. (USA)

SESSION 5 SENSOR DATA FUSION

- 6969 OW **Multitarget-multisensor tracking in an urban environment: a closed-loop approach** [6969-27]
P. R. Barbosa, Colorado State Univ. (USA) and Intermap Technologies Inc. (USA); E. K. P. Chong, Colorado State Univ. (USA); S. Suvorova, B. Moran, Univ. of Melbourne (Australia)
- 6969 OX **Comparison of track-to-track fusion algorithms using video sensors on multiple unmanned aerial vehicles** [6969-28]
M. Mallick, Science Applications International Corp. (USA); K. C. Chang, George Mason Univ. (USA)
- 6969 OY **Track fusion with feedback for local trackers using MHT** [6969-29]
D. Danu, McMaster Univ. (Canada); T. Lang, General Dynamics Canada (Canada); T. Kirubarajan, McMaster Univ. (Canada)
- 6969 OZ **Analysis of scan and batch processing approaches to static fusion in sensor networks** [6969-30]
M. Guerriero, Univ. of Connecticut (USA); S. Coraluppi, NATO Undersea Research Ctr. (Italy); P. Willett, Univ. of Connecticut (USA)
- 6969 10 **Sequential track-to-track fusion algorithm: exact solution and approximate implementation** [6969-31]
X. Tian, Y. Bar-Shalom, Univ. of Connecticut (USA)
- 6969 11 **Track covariance compensation for data misassociations: alternative data association algorithms** [6969-32]
O. E. Drummond, CyberRnD, Inc. (USA)
- 6969 12 **Distributed multiple-hypothesis correlation and feedback with applications to video data** [6969-33]
K. M. Tarplee, D. J. Trawick, S. M. Herman, Numerica Corp. (USA)

SESSION 6 SIGNAL AND DATA PROCESSING

- 6969 13 **Tracking and classification using aspect-dependent RCS and kinematic data** [6969-34]
S. Sutharsan, R. Tharmarasa, McMaster Univ. (Canada); T. Lang, General Dynamics Canada Ltd. (Canada); T. Kirubarajan, McMaster Univ. (Canada)
- 6969 14 **Context aided tracking in aerial video surveillance** [6969-35]
S. J. Pierce, Air Force Institute of Technology (USA); J. R. Vasquez, Numerica Corp. (USA)
- 6969 15 **A distributed database view of network tracking systems** [6969-36]
J. Yosinski, R. Paffenroth, Numerica Corp. (USA)
- 6969 16 **Track covariance compensation for data misassociations: simplifications for reduced complexity** [6969-37]
O. E. Drummond, CyberRnD, Inc. (USA)
- 6969 17 **Efficient data association for move-stop-move target tracking** [6969-38]
T. Sathyan, McMaster Univ. (Canada); M. McDonald, Defence Research and Development Canada (Canada); T. Kirubarajan, McMaster Univ. (Canada)
- 6969 18 **Particle flow for nonlinear filters with log-homotopy** [6969-39]
F. Daum, J. Huang, Raytheon Co. (USA)
- 6969 19 **Hazardous material localization and person tracking** [6969-55]
M. Wieneke, K. Safenreiter, W. Koch, FGAN-FKIE (Germany)
- 6969 1B **The probability of misassociation between neighboring targets** [6969-41]
J. A. Areta, Y. Bar-Shalom, Univ. of Connecticut (USA); R. Rothrock, SPARTA, Inc. (USA)

POSTER SESSION

- 6969 1C **Small object hyperspectral detection from a low-flying UAV** [6969-43]
J. Murray-Krezan, J. G. Neumann, R. A. Leathers, Naval Research Lab. (USA)
- 6969 1D **Suppression of subpixel sensor jitter fluctuations using temporal whitening** [6969-44]
S. M. Adler-Golden, S. C. Richtsmeier, R. M. Shroll, Spectral Sciences, Inc. (USA)
- 6969 1E **Surveillance by multiple cooperative UAVs in adversarial environments** [6969-47]
X. Tian, Y. Bar-Shalom, K. R. Pattipati, Univ. of Connecticut (USA); A. Sinha, McMaster Univ. (Canada)
- 6969 1F **Passive tracking with sensors of opportunity using passive coherent location** [6969-48]
M. Subramaniam, R. Tharmarasa, McMaster Univ. (Canada); M. McDonald, Defence Research and Development Canada (Canada); T. Kirubarajan, McMaster Univ. (Canada)
- 6969 1G **Concurrent MAP data association and absolute bias estimation with an arbitrary number of sensors** [6969-50]
B. D. Kragel, S. Danford, A. B. Poore, Numerica Corp. (USA)

- 6969 1H **Out-of-sequence measurement updates for multi-hypothesis tracking algorithms** [6969-51]
S. Chan, R. Paffenroth, Numerica Corp. (USA)
- 6969 1I **Robust scale invariant small target detection using the Laplacian scale-space theory**
[6969-52]
S. Kim, Y. Yang, J. Lee, Y. Park, Agency for Defense Development (South Korea)

Denise L. Jones, U.S. Army Space and Missile Defense Command (USA)

Introduction

This was the twentieth in a series of SPIE conferences to focus on signal and data processing of small targets. Many related conferences are concerned with processing large targets, namely, targets large enough for traditional automatic (or assisted) target recognition (ATR) with a single frame of data. A target large enough for ATR is typically larger than a total of 100 resolution elements, for example, larger than 10 by 10 pixels. In contrast, this conference series introduced a different thrust for SPIE: processing targets smaller than 100 pixels.

This year the conference was held in Orlando after being held in San Diego the prior year. In the future, these conferences are expected to continue to be located in Orlando in the spring on even years and in San Diego at the annual Optics+Photonics meeting in the summer on odd years. The proceedings of the prior conferences in this series, 1989 through 2007, are SPIE Volumes 1096, 1305, 1481, 1698, 1954, 2235, 2561, 2759, 3163, 3373, 3809, 4048, 4473, 4728, 5204, 5428, 5913, 6236, and 6699. A compact disk of all the papers in this series from 1989 through 2000 is also available: SPIE volume CDP20 (two-disk set).

The various types of processing tasks with sensor-derived data of targets can be broadly categorized into four generic classes, as follows:

- * Sensor tracking of a single (bright) target
- * Image and data processing of large targets
- * Signal and data processing of medium sized targets
- * Signal and data processing of small targets.

Note that the size indicated in this list is in terms of the number of resolution elements or pixels. The motivation for categorizing the processing of sensor data this way is because typically the appropriate algorithms for each of these problems differ substantially from that of the others. This conference concentrates on small targets that include:

- * Point source objects
- * Small extended objects
- * Clusters of point source and small extended objects.

The size of a typical point source target in the field of view is from less than one to about 20 pixels (resolution elements) wide, depending on the sensor design. Although the processing of point targets has been studied extensively, there are still many interesting challenges in this field. In contrast, the state of the art for processing small extended objects and clusters is far less mature but interest is growing.

Small targets that are not point source objects include both small extended objects and unresolved closely spaced objects, sometimes called clumps. While

these small targets provide little detailed information useful for ATR, they do exhibit some shape and size information that might be useful in tracking. In addition, an extended object may at times be partially or fully obscured or may obscure rather than add to the background. The apparent size and shape of a target can differ from sensor to sensor and over time; this may have to be taken into account. Similarly, cluster processing offers significant advantages and challenges.

Current algorithm development is driven by improved sensors, increasingly demanding system requirements, processor hardware limitations, severe operating environments, efficacious countermeasures, and challenging threat scenarios. Of special interest is the ability to track low observables or in a moderate to dense population of threshold exceedances caused by clutter, false signals, or targets that are close or crossing.

There is an increasing need for improvements in “algorithm efficiency,” i.e., improved performance relative to the processor and communication resources required. A major trade in selecting algorithms for processing small targets is performance versus required processor and communications capacity. Also needed are accurate evaluations and predictions of required resources and functional performance under realistic conditions. Major improvements are needed in: multiple spectral signal processing, multiple target tracking, network centric sensor data fusion, multiple frame data association, multiple frame signal processing (such as track-before-detect), effective management of sensors, communications, processor resources, target classification, processing of features and attributes, and the interaction between signal processing and tracking. Many of these issues are highlighted in Figure 1. Also needed is additional information and covariance consistency in the tracker output to the users and functions that depend on the tracker data to facilitate the improvement of their performance.

The term fuse-before-detect in Figure 1 refers to the combining (fusing) of raw data from multiple sensors before applying a threshold (detection) at the signal processing level. I coined this term in recognition of the increased interest in improving performance by fusing sensor data early in the processing chain. Note also in Figure 1 the possible use of track data at the signal processing level. There is a growing recognition of the importance of using all available information in every stage of the processing and hence the use of feedback.

Figure 1. Sensor Signal and Data Processing

This conference has provided a forum to address these issues through discussion of algorithms and simulations for both digital signal processing and target tracking, i.e., association (correlation) and filtering, including related data processing, such as sensor fusion, sensor resource management, and target classification. Of the six half-day sessions, one addressed signal-level processing and six addressed target tracking, sensor data fusion, and related network wide processing. The distinction between the two stages of single sensor-level processing is shown in Figure 1.

These proceedings papers contain a wealth of information that address the issues critical to practical processing under the challenging conditions outlined above. For example, important advances are presented in: chem/bio defense, novel signal processing methods, track filter methods to accommodate non-linearities, advanced distributed sensor data fusion, improved methods for tracking maneuvering targets, video tracking, feature-aided tracking, processing with unresolved close-spaced objects, processing registration biases, management of multiple sensor resources, tracking ground targets, and tracking covariance consistency processing. These techniques and others presented are strong candidates to permit high performance target tracking and classification and related processing of low observables or in an environment of moderately dense detections and with abruptly maneuvering targets. These and other innovative yet practical techniques were presented that contribute to improving algorithm efficiency for processing small targets.

Many of the experts and organizations that are making the major important advances in practical sensor signal and data processing have contributed to these proceedings. This year we had a workshop on Tuesday evening with three excellent demonstrations. This workshop, which is entitled Demonstration and Open Discussion, has become a regular annual event, as have the daily Small Target Luncheon Dialogues.

We thank the authors, session chairs, attendees, and SPIE coordinators for making the three-day conference, the luncheon dialogues, and the evening workshop such successes. They have taken part in enthusiastic discussions that generated better understanding for the application of the techniques presented and have stimulated thoughts for further improvements. Informal discussions during the coffee breaks and at the luncheons were especially productive, as usual. With these proceedings, the authors have extended the state of the art of analysis, algorithms, and simulations for the use of data from one or more sensors used in signal and data processing of small targets and related processing.
