Paper Numbering: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print and on CD-ROM. Papers are published as they are submitted and meet publication criteria. A unique, consistent, permanent citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages. Numbers in the index correspond to the last two digits of the six-digit CID number.

Introduction

The Eighth International Conference on Correlation Optics continues the series of conferences with the same title held biannually since 1993 at Chernivtsi National University (Ukraine). More than 80 participants from 18 countries attended the conference, and more than 140 reports were presented.

This volume includes the invited talks as well as the best oral and poster contributions on the following topics:

1. Informative content of statistical optical fields, including optical chaos and singular optics;
2. Optical correlation diagnostics, interferometry and microscopy of rough surfaces and random media;
3. Optical correlation devices on diffractive optical elements, including optical and digital holography, fractal optics and optical sensors; and
4. New applications of correlation optics in biology and medicine.

We are grateful to all participants of the conference, as well as to the members of the International Program Committee and the Conference Organizing Committee, whose work provided the high scientific and organizing level of the conference.
