Volume 7091

Proceedings of SPIE, 0277-786X, v. 7091

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers included in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. The papers published in these proceedings reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from this book:

Copying of material in this book for internal or personal use, or for the internal or personal use of specific clients, beyond the fair use provisions granted by the U.S. Copyright Law is authorized by SPIE subject to payment of copying fees. The Transactional Reporting Service base fee for this volume is \$18.00 per article (or portion thereof), which should be paid directly to the Copyright Clearance Center (CCC), 222 Rosewood Drive, Danvers, MA 01923. Payment may also be made electronically through CCC Online at copyright.com. Other copying for republication, resale, advertising or promotion, or any form of systematic or multiple reproduction of any material in this book is prohibited except with permission in writing from the publisher. The CCC fee code is 0277-786X/08/\$18.00.

Printed in the United States of America.

Publication of record for individual papers is online in the SPIE Digital Library.

SPIDigitalLibrary.org

Paper Numbering: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print and on CD-ROM. Papers are published as they are submitted and meet publication criteria. A unique, consistent, permanent citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages. Numbers in the index correspond to the last two digits of the six-digit CID number.

Contents

vii	Conference Committee
ix	Introduction

SESSION 1 COMPONENTS AND SYSTEMS DESIGN AND ANALYSIS I

- 7091 02 **Optical RF Communications Adjunct (Invited Paper)** [7091-01]
L. B. Stotts, Defense Advanced Research Projects Agency (United States); B. Stadler, Air Force Research Lab. (United States); B. Graves, M. Northcott, J. Douglass, AOptix (United States); D. Young, J. Sluz, J. Juarez, Johns Hopkins Univ. (United States); P. Kolodzy, Kolodzy Consulting (United States); H. A. Pike, Defense Strategies and Systems, Inc. (United States); G. Lee, Consultant (United States)
- 7091 03 **Ten Gb/s optically pre-amplified RZ-DPSK for FSO communications systems with very large link losses** [7091-02]
C. Wree, Discovery Semiconductors (United States); C. P. Collier, Science Applications International Corp. (United States); S. Lane, A. Turney, Air Force Research Lab. (United States); B. Armentrout, J. Yates, Schafer Corp. (United States); N. Francis, Air Force Research Lab. (United States); A. Joshi, Discovery Semiconductors (United States)
- 7091 04 **Low complexity error-control-coding for variable duty-cycle pulse-position-modulation** [7091-03]
B. Moision, Jet Propulsion Lab. (United States)
- 7091 05 **Characterization of an optical phased array for use in free space optical communication antennas** [7091-04]
I. Anisimov, Ladar and Optical Communications Institute (United States); S. R. Harris, Flatiron Research LLC (United States); B. K. Stadler, Air Force Research Lab. (United States)

SESSION 2 COMPONENTS AND SYSTEMS DESIGN AND ANALYSIS II

- 7091 06 **Indoor visible light communications: challenges and prospects** [7091-06]
D. O'Brien, H. Le Minh, L. Zeng, G. Faulkner, Univ. of Oxford (United Kingdom); K. Lee, D. Jung, Y. Oh, E. T. Won, Samsung Electronics Co., Ltd. (South Korea)
- 7091 07 **Design of free space optical omnidirectional transceivers for indoor applications using non-imaging optical devices** [7091-07]
N. Agrawal, C. C. Davis, Univ. of Maryland, College Park (United States)
- 7091 09 **Free-space high data rate communications technologies for near terrestrial space** [7091-09]
C. L. Edwards, J. R. Bruzzi, B. G. Boone, The Johns Hopkins Univ. (United States)

SESSION 3 CODING AND NETWORKING

- 7091 0A **A convex optimization method for self-organization in dynamic (FSO/RF) wireless networks** [7091-10]
J. Llorca, C. C. Davis, S. D. Milner, Univ. of Maryland, College Park (United States)
- 7091 0C **Coding techniques to mitigate fading on free-space optical communication links** [7091-12]
H. Henniger, B. Epple, German Aerospace Ctr. (Germany); S. D. Milner, C. C. Davis, Univ. of Maryland, College Park (United States)
- 7091 0D **Indoor Free Space Optic: a new prototype, realization and evaluation** [7091-13]
O. Bouchet, France Telecom Research and Development (France); P. Besnard, A. Mihaescu, FOTON-ENSSAT, CNRS (France)
- 7091 0E **Optical terminal requirements for aeronautical multi-hop networks** [7091-14]
K. Karras, D. Marinos, P. Kouras, Technological Educational Institute of Piraeus (Greece)

SESSION 4 MITIGATION, SCINTILLATION, AND ADAPTIVE CONTROL I

- 7091 0F **Direct reduction of aero-optical laser beam aberrations by active turbulence control** [7091-15]
A. P. Freeman, F. R. Zubair, J. Shockro, S. Piatrovich, H. J. Catrakis, Univ. of California, Irvine (United States)
- 7091 0G **A comparative study of 2.667 Gb/s OOK, DPSK, and PPM modulation formats for FSO applications** [7091-16]
N. Chand, A. J. Hunton, B. M. Eteson, BAE Systems Electronics and Integrated Solutions (United States)
- 7091 0H **Statistical properties of the received current in FSO systems** [7091-17]
J. P. G. de Oliveira, Univ. of Karlsruhe (Germany)

SESSION 5 EXPERIMENTAL MEASUREMENTS, CONCEPTS, AND PERFORMANCE I

- 7091 0J **Large area adaptive avalanche photodetector arrays for free-space optical communication** [7091-20]
M. S. Ferraro, U.S. Naval Research Lab. (United States); W. T. Freeman, Smart Logic, Inc. (United States); R. Mahon, J. L. Murphy, P. G. Goetz, U.S. Naval Research Lab. (United States); M. Colbert, Smart Logic, Inc. (United States); W. S. Rabinovich, H. R. Burris, C. I. Moore, U.S. Naval Research Lab. (United States); W. R. Clark, W. D. Waters, Optogration, Inc. (United States)
- 7091 0L **Experimental comparison of B-PPM and NRZ coding formats in a 1550nm trans-atmospheric optical communication link under deep fading conditions** [7091-23]
R. Peach, G. Burdge, C. Visone, J. Wyatt, M. Borbath, Harris Corp. (United States); R. Phillips, L. Andrews, D. Wayne, Univ. of Central Florida (United States); J. Kiriazes, NASA Kennedy Space Ctr. (United States)

- 7091 OM **A parametric single scattering channel model for non-line-of-sight ultraviolet communications** [7091-35]
H. Ding, G. Chen, Univ. of California, Riverside (United States); A. K. Majumdar, Naval Air Warfare Ctr. (United States); Z. Xu, Univ. of California, Riverside (United States)

SESSION 6 OPTICAL TURBULENCE CHARACTERIZATION AND LASER BEAM POINTING: JOINT SESSION WITH CONFERENCE 7090

- 7091 ON **Aperture averaging and correlation function measurements in strong atmospheric turbulence for optical wireless applications** [7091-24]
H. Yuksel, Bogazici Univ. (Turkey); J. Harris, Y. Tang, R. Gammon, C. Davis, Univ. of Maryland, College Park (United States)
- 7091 OO **Beam wander of a collimated beam: comparing theory and experiment** [7091-25]
D. T. Wayne, R. L. Phillips, L. C. Andrews, Univ. of Central Florida (United States); B. Griffis, Computer Science Corp. (United States)
- 7091 OP **Performance and characterization results of a lasercom testbed for the pointing, acquisition, and tracking subsystem of a satellite-to-satellite laser communications link** [7091-26]
J. C. Cardema, J. N. Tanzillo, S. Lee, C. B. Dunbar, The Aerospace Corp. (United States)

POSTER SESSION

- 7091 OQ **Large-Optics white light interferometer for laser wavefront test: apparatus and application** [7091-27]
Z. Luan, L. Liu, L. Wang, D. Liu, Shanghai Institute of Optics and Fine Mechanics (China)
- 7091 OR **Test results of the optical PAT test bed for satellite laser communications** [7091-28]
J. Sun, L. Liu, Y. Zhou, D. Liu, Shanghai Institute of Optics and Fine Mechanics (China)
- 7091 OS **The mechanical design of the large-optics double-shearing interferometer for the test of diffraction-limited wavefront** [7091-29]
L. Wang, L. Liu, L. Zhu, J. Sun, Y. Zhou, D. Liu, Shanghai Institute of Optics and Fine Mechanics (China)
- 7091 OT **Design of 2*6 optical hybrid in inter-satellite coherent laser communications** [7091-30]
N. Xu, L. Liu, D. Liu, Shanghai Institute of Optics and Fine Mechanics (China); L. Wan, Guangxi Univ. (China); Y. Zhou, Shanghai Institute of Optics and Fine Mechanics (China)
- 7091 OU **Coherent area inside partially coherent laser beam through atmospheric and sea water turbulences** [7091-31]
W. Lu, L. Liu, D. Liu, J. Sun, A. Yan, Shanghai Institute of Optics and Fine Mechanics (China)
- 7091 OV **Investigation of transmission of light through rain** [7091-32]
J. Chen, Z. Hu, D. Zhang, S. Zhuang, Univ. of Shanghai for Science and Technology (China)

- 7091 OW **Dual optical wireless test link** [7091-33]
O. Wilfert, Z. Kolka, V. Biolkova, P. Krivak, L. Dordova, Brno Univ. of Technology (Czech Republic); O. Fiser, Institute of Atmospheric Physics (Czech Republic); J. Nemecek, Univ. of Defence (Czech Republic)
- 7091 OX **Hybrid free-space optical and radio frequency switching** [7091-34]
D. S. Kim, G. C. Gilbreath, J. Doffoh, C. O. Font-Jimenez, M. Suite, U.S. Naval Research Lab. (United States)

Author Index

Conference Committee

Conference Chairs

Arun K. Majumdar, Naval Air Warfare Center (United States)
Christopher C. Davis, University of Maryland, College Park
(United States)

Program Committee

Larry C. Andrews, University of Central Florida (United States)
Shlomi Arnon, Ben-Gurion University of the Negev (Israel)
Mikhail S. Belen'kii, Trex Enterprises Corporation (United States)
Don M. Boroson, MIT Lincoln Laboratory (United States)
Naresh Chand, BAE Systems North America (United States)
Frank D. Eaton, Air Force Research Laboratory (United States)
Bernhard Eppe, DLR Standort Oberpfaffenhofen (Germany)
G. Charmaine Gilbreath, Naval Research Laboratory (United States)
Hennes Henniger, DLR Standort Oberpfaffenhofen (Germany)
Anton Kohnle, Forschungsgesellschaft für Angewandte
Naturwissenschaften e.V. (Germany)
Stuart D. Milner, University of Maryland, College Park (United States)
Michela Muñoz Fernández, Jet Propulsion Laboratory (United States)
Dominic C. O'Brien, University of Oxford (United Kingdom)
Jacobus M. Oschmann, Jr., Ball Aerospace & Technologies
Corporation (United States)
Narasimha S. Prasad, NASA Langley Research Center (United States)
William S. Rabinovich, Naval Research Laboratory (United States)
Marcos Reyes Garcia-Talavera, Instituto de Astrofísica de Canarias
(Spain)
Jennifer C. Ricklin, Defense Advanced Research Projects Agency
(United States)
Thomas M. Shay, Air Force Research Laboratory (United States)
Larry B. Stotts, Defense Advanced Research Projects Agency
(United States)

Session Chairs

- 1 Components and Systems Design and Analysis I
Arun K. Majumdar, Naval Air Warfare Center (United States)
Christopher C. Davis, University of Maryland, College Park
(United States)

- 2 Components and Systems Design and Analysis II
Naresh Chand, BAE Systems North America (United States)
- 3 Coding and Networking
Stuart D. Milner, University of Maryland, College Park (United States)
- 4 Mitigation, Scintillation, and Adaptive Control I
Arun K. Majumdar, Naval Air Warfare Center (United States)
- 5 Experimental Measurements, Concepts, and Performance I
Bernhard Eppe, DLR Standort Oberpfaffenhofen (Germany)
- 6 Optical Turbulence Characterization and Laser Beam Pointing: Joint
Session with Conference 7090
Matthew M. Bold, Defense Strategies and Systems, Inc. (United States)

Introduction

This volume contains the papers submitted and accepted as full manuscripts following presentation at the Eighth Free Space Laser Communications Conference. Free space optical (FSO) communication is now a mature field, but many exciting fundamental and technological challenges remain to improve its performance in a range of scenarios. Short range FSO systems are widely deployed and are available commercially. The performance of communication networks containing such links in addition to directional and omnidirectional RF connections continues, however, to present research challenges. Military applications of FSO technology involving long range links, with mobile and airborne platforms, remains an area of active research and development. Very long range terrestrial links through the atmosphere can experience severe scintillation caused by atmospheric turbulence, which presents significant challenges in beam pointing and leads to deep fades. Clock synchronization is difficult to maintain in the face of these disturbances. An open question remains as to how much the performance of FSO links can be improved with adaptive optics, and how these improvements depend on the length of the link. The performance of free space links can also be improved by forward error correction and packet-level correction codes. Clever transceiver implementations and the right modulation schemes can also improve link performance. All these issues are addressed in papers published in this volume. Ground to satellite, satellite-to-satellite, and deep space optical communications present their own challenges, which are also discussed. The use of FSO communications in indoor spaces over short ranges is attracting attention as a non-interfering alternative to RF communications, and several papers address this important area of research and development. At a fundamental level, several papers address measurement of the effects of the atmosphere on propagating beam waves, where atmospheric properties can be measured, and correlated with theoretical models describing phenomena such as beam wander, scintillation and correlation functions.
