Paper Numbering: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print and on CD-ROM. Papers are published as they are submitted and meet publication criteria. A unique, consistent, permanent citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages. Numbers in the index correspond to the last two digits of the six-digit CID number.

Introduction

These proceedings contain 53 papers that were presented at the SPIE Conference on 'Remote Sensing for Environmental Monitoring, GIS Applications, and Geology.' The conference took place in Cardiff, Wales, 15–18 September 2008. It was the eighth conference with this topic after its inauguration in Toulouse, France, in 2001.

The conference sessions with presented papers and interactive posters were grouped into the following themes: remote sensing for archaeology, cultural, and natural heritage geospatial infrastructure; coastal remote sensing; urban remote sensing; remote sensing of hazards; environmental monitoring; pollution; data fusion; land use and land cover; geological remote sensing; remote sensing modeling, and novel remote sensing/GIS applications. Lively discussions often continued into the coffee breaks. Although the session topics seemed rather diverse, there was a common thread to many papers, i.e., application of remotely sensed data for the protection of our environment and its integration with Geographic Information Systems (GIS). Our conference is the only one in SPIE's International Symposium on Remote Sensing that covers GIS. There was strong support from the audience to continue these themes for future conferences.

The paper submission and review process were again perfectly organized by the SPIE staff. We like to thank the SPIE staff onsite for their responsiveness and support. We are also grateful to our cochair, Manfred Ehlers and Hermann Kaufmann, and the program committee for their help in the reviewing and session compilation process.
