SPIE

Volume 7119

Proceedings of SPIE, 0277-786X, v. 7119

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers included in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. The papers published in these proceedings reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from this book:

Author(s), "Title of Paper," in *Optics and Photonics for Counterterrorism and Crime Fighting IV*, edited by Gari Owen, Proceedings of SPIE Vol. 7119 (SPIE, Bellingham, WA, 2008) Article CID Number.

The Transactional Reporting Service base fee for this volume is \$18.00 per article (or portion thereof), which should be paid directly to the Copyright Clearance Center (CCC), 222 Rosewood Drive, Danvers, MA 01923. Payment may also be made electronically through CCC Online at copyright.com. Other copying for republication, resale, advertising or promotion, or any form of systematic or multiple reproduction of any material in this book is prohibited except with permission in writing from the publisher. The CCC fee code is 0277-786X/08/\$18.00.

Printed in the United States of America.

Publication of record for individual papers is online in the SPIE Digital Library.

SPIDigitalLibrary.org

Paper Numbering: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print and on CD-ROM. Papers are published as they are submitted and meet publication criteria. A unique, consistent, permanent citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages. Numbers in the index correspond to the last two digits of the six-digit CID number.

Contents

vii	Conference Committee
ix	Introduction

OPTICAL SYSTEM DESIGN

7119 03	Improving transmission and image contrast in medium and high performance optical systems using weighted average angle of incidence techniques to optimize coatings [7119-02] J. A. Harder, M. Sprague, ESA, Inc. (United States)
7119 04	Towards generic military imaging adaptive optics [7119-03] H. S. Rana, Defence Science and Technology Lab. (United Kingdom)
7119 05	Applied multi-dimensional fusion for urban intelligence, surveillance, target acquisition, and reconnaissance [7119-04] A. Mahmood, P. M. Tudor, General Dynamics United Kingdom Ltd. (United Kingdom)

BIOMETRICS

7119 06	Preprocessing of off-axis iris images for recognition [7119-05] L. R. Kennell, R. P. Broussard, R. W. Ives, J. R. Matey, U.S. Naval Academy (United States)
---------	---

DETECTION AND TRACKING

7119 07	An evaluation metric for multiple camera tracking systems: the i-LIDS 5th scenario [7119-08] A. Nilski, Home Office Scientific Development Branch (United Kingdom)
7119 08	People tracking without prior information: a biological cortex-like neural approach [7119-09] P. W. T. Yuen, Cranfield Univ. (United Kingdom)
7119 0A	Performance analysis of a modified moving shadow elimination method developed for indoor scene activity tracking [7119-11] B. K. Mitra, M. K. Fiaz, I. Kypraios, P. Birch, R. Young, C. Chatwin, Univ. of Sussex (United Kingdom)
7119 0B	Multi-platform multi-target tracking fusion via covariance intersection: using fuzzy optimised modified Kalman filters with measurement noise covariance estimation [7119-12] T. J. Wren, A. Mahmood, General Dynamics United Kingdom Ltd. (United Kingdom)
7119 0C	Detection and behavioural analysis of fast inshore attack craft [7119-13] J. Rogers, D. Hickman, Waterfall Solutions Ltd. (United Kingdom)

- 7119 0D **Spectral tracking of objects in real time** [7119-14]
G. J. Bishop, A. Killey, M. D. Porter, A. S. Blagg, BAE SYSTEMS (United Kingdom)

VISUALISATION

- 7119 0E **Image draping for planar surfaces extracted from point clouds** [7119-15]
A. Mahmood, M. Christy, S. Hughes, P. M. Tudor, General Dynamics United Kingdom Ltd. (United Kingdom)

FORENSICS AND APPLICATIONS

- 7119 0F **Nanoparticles in forensic science** [7119-16]
A. A. Cantu, Scientific Consultant (United States)
- 7119 0G **Digital processing of signals arising from organic liquid scintillators for applications in the mixed-field assessment of nuclear threats** [7119-17]
M. D. Aspinall, M. J. Joyce, R. O. Mackin, Lancaster Univ. (United Kingdom); Z. Jarrah, Hybrid Instruments Ltd. (United Kingdom); A. J. Peyton, The Univ. of Manchester (United Kingdom)
- 7119 0H **Development of a portable thermal neutron detector based on a boron rich heterodiode** [7119-18]
R. Tomov, R. Venn, Cambridge Microfab Ltd. (United Kingdom); A. Owens, A. Peacock, ESA/ESTEC (Netherlands)
- 7119 0I **Rapid screening and identification of improvised explosive and hazardous precursor materials by Raman spectroscopy** [7119-19]
R. J. Stokes, W. E. Smith, Univ. of Strathclyde (United Kingdom); B. Foulger, C. Lewis, Ministry of Defence SA/SD (United Kingdom)
- 7119 0J **Tackling field-portable Raman spectroscopy of real world samples** [7119-20]
N. C. Shand, Defence Science and Technology Lab. (United Kingdom)
- 7119 0K **Bulk and trace detection of ammonia and hydrogen peroxide using quantum cascade laser technology: a tool for identifying improvised explosive devices** [7119-21]
R. Lindley, E. Normand, M. McCulloch, P. Black, I. Howieson, Cascade Technologies Ltd. (United Kingdom); C. Lewis, B. Foulger, Ministry of Defence SA/SD (United Kingdom)

POSTER SESSION

- 7119 0L **Intruder localization and identification in fiber optic systems** [7119-22]
M. Życzkowski, Military University of Technology (Poland)
- 7119 0M **Surface creation and segmentation for 3D point clouds of an urban environment** [7119-23]
A. Mahmood, M. Christy, P. M. Tudor, General Dynamics United Kingdom Ltd. (United Kingdom)

7119 ON **Effective reconstruction of dynamics of medium response spectrum** [7119-24]
V. A. Trofimov, S. A. Varentsova, Lomonosov Moscow State Univ. (Russian Federation)

Keynote Address

Gari Owen, Ministry of Defence SA/SD (United Kingdom)

Optical System Design

David J. Barrett, QinetiQ Ltd. (United Kingdom)

Biometrics

Robert Bower, Ministry of Defence (United Kingdom)

Detection and Tracking

Howard J. Cummins, Her Majesty's Government Communications
Centre (United Kingdom)

Colin Lewis, Ministry of Defence SA/SD (United Kingdom)

Visualisation

Gari Owen, Ministry of Defence SA/SD (United Kingdom)

Forensics and Applications

Brian E. Foulger, Ministry of Defence SA/SD (United Kingdom)

Introduction

A cynic once remarked that before the age of television, a relaxing form of entertainment used to be watching the dying embers of a fire, but it is doubtful whether the information content of the contemporary form of entertainment is any higher in some cases.

This remark perhaps reflects one major issue that is continually identified at this conference. There is an ever increasing amount of video product being generated and stored, but how much of it produces useful information? The temptation to store increasing amount of data also increases as a consequence of the ever decreasing cost of data storage. Vast amounts of data stored means, however, that there is a requirement for ever increasing data processing capability to search for useful information, which in many security scenarios is required in real time or at least near real time.

One paper discussed a way of addressing this analysis problem by consideration of the human approach to searching for useful information in a visual scene rather than a machine-based approach. The area of pre-processing information to eliminate unnecessary data storage is worthy of further investigation. A key to addressing this problem is to define the threat, define what we are looking for, and transform "unknown unknowns" into "known unknowns." Any identification process is also required to have a low false alarm rate.

The incorporation of biometric technology within video analytics provides a possible means of extracting information, at least about human subjects. A vast amount of research has been conducted over the years on problems such as object tracking within video, but a relatively small amount of this research has been commercialised for various reasons. There is also a requirement for standardised realistic data to test new algorithms such as object tracking. The UK Home Office i-LIDS database represents a major advance to meet this requirement.

Visualisation is a rapidly evolving field and capture techniques such as LIDAR combined with high resolution photography are being developed. This has the potential of revealing scene changes and thus minimising the danger of travelling through hostile terrain.

Optics and photonics techniques are widely applicable across many spectral regions for the identification of hazardous materials such as improvised explosives and radiological materials. Considerable strides have been made here, with the emphasis being on low-cost, easy to use systems that can provide results in near real time.

In general, low false alarm rate systems are likely to emerge from combining disparate technologies such as photonic-based explosives detectors with video analytics. Again, there is a need for realistic data to test such integrated systems. In this case, the system would have a physical component such as a hazardous material or its simulant together with video data. Consideration should also be given to extracting useful video data from the internet. This could be used either as test data or indeed can be analysed to extract intelligence and identify trends.

It is hoped that some of the issues above can be addressed at future conferences in this series.
