Volume 7226

Proceedings of SPIE, 0277-786X, v. 7226

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers included in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. The papers published in these proceedings reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from this book:

Copying of material in this book for internal or personal use, or for the internal or personal use of specific clients, beyond the fair use provisions granted by the U.S. Copyright Law is authorized by SPIE subject to payment of copying fees. The Transactional Reporting Service base fee for this volume is \$18.00 per article (or portion thereof), which should be paid directly to the Copyright Clearance Center (CCC), 222 Rosewood Drive, Danvers, MA 01923. Payment may also be made electronically through CCC Online at copyright.com. Other copying for republication, resale, advertising or promotion, or any form of systematic or multiple reproduction of any material in this book is prohibited except with permission in writing from the publisher. The CCC fee code is 0277-786X/09/\$18.00.

Printed in the United States of America.

Publication of record for individual papers is online in the SPIE Digital Library.

SPIDigitalLibrary.org

Paper Numbering: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print and on CD-ROM. Papers are published as they are submitted and meet publication criteria. A unique, consistent, permanent citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages. Numbers in the index correspond to the last two digits of the six-digit CID number.

Contents

vii	Conference Committee
ix	Introduction

SLOW LIGHT IN POLARITONS, GRATINGS, AND RELATED SYSTEMS

7226 04	Dispersion-free slow light pulse and its functionalities (Invited Paper) [7226-03] T. Baba, H. Sasaki, J. Adachi, T. Kawasaki, D. Mori, Yokohama National Univ. (Japan) and Japan Science and Technology Agency (Japan)
7226 05	SBS-based slow light in optical fibers: optimum design considerations for undistorted slow-light signal propagation in steady-state and transient regimes (Invited Paper) [7226-04] L. Ren, Univ. of Electro-Communications (Japan) and Xi'an Institute of Optics and Precision Mechanics (China); Y. Tomita, Univ. of Electro-Communications (Japan)
7226 07	Enhanced second harmonic generation in coupled semiconductor whispering gallery mode microresonators [7226-06] Y. Dumeige, ENSSAT-FOTON, CNRS, Univ. de Rennes 1 (France)
7226 08	Non-linear interactions in electromagnetically induced transparency and related pump-probe optical phenomena (Invited Paper) [7226-07] V. L. Jacobs, Naval Research Lab. (United States)

SLOW AND FAST LIGHT IN OPTICAL FIBER I

7226 09	Few photon switching with slow light in hollow fiber (Invited Paper) [7226-09] M. Bajcsy, S. Hofferberth, V. Balic, Harvard Univ. (United States); T. Peyronel, Massachusetts Institute of Technology (United States); M. Hafezi, A. S. Zibrov, Harvard Univ. (United States); V. Vuletic, Massachusetts Institute of Technology (United States); M. D. Lukin, Harvard Univ. (United States)
7226 0A	True-time delay steering of phased array radars using slow light (Invited Paper) [7226-10] M. Bashkansky, Naval Research Lab. (United States); Z. Dutton, BBN Technologies (United States); A. Gulian, Naval Research Lab. (United States) and SFA, Inc. (United States); D. Walker, F. Fatemi, M. Steiner, Naval Research Lab. (United States)
7226 0C	Potentialities of slow and fast light in optical fibers (Invited Paper) [7226-12] L. Thévenaz, École Polytechnique Fédérale de Lausanne (Switzerland); M. Gonzalez Herraiz, Univ. of Alcalá (Spain); S.-H. Chin, École Polytechnique Fédérale de Lausanne (Switzerland)

SLOW AND FAST LIGHT IN OPTICAL FIBER II

- 7226 OF **Slow and fast light in optical fibers using acoustooptic coupling between two co-propagating modes** [7226-15]
M. W. Haakestad, Norwegian Defence Research Establishment (Norway); J. Skaar, Norwegian Univ. of Science and Technology (Norway)

SLOW LIGHT IN ATOMIC VAPOR

- 7226 OH **Slow light and EIT under realistic (imperfect) conditions (Invited Paper)** [7226-17]
M. Klein, Harvard-Smithsonian Ctr. for Astrophysics (United States) and Harvard Univ. (United States); Y. Xiao, Harvard-Smithsonian Ctr. for Astrophysics (United States); M. Hohensee, Harvard-Smithsonian Ctr. for Astrophysics (United States) and Harvard Univ. (United States); D. F. Phillips, Harvard-Smithsonian Ctr. for Astrophysics (United States); R. L. Walsworth, Harvard-Smithsonian Ctr. for Astrophysics (United States) and Harvard Univ. (United States)
- 7226 OJ **Realistic theory of electromagnetically induced transparency and slow light in a hot atomic vapor (Invited Paper)** [7226-19]
R. Ghosh, J. Ghosh, Jawaharlal Nehru Univ. (India); F. Goldfarb, J.-L. Le Gouët, F. Bretenaker, Lab. Aimé Cotton, CNRS, Univ. Paris Sud 11 (France)
- 7226 OK **Impact of non-adiabatic fields and dissipation on quantum storage and retrieval** [7226-20]
J. Ghosh, R. Ghosh, D. Kumar, Jawaharlal Nehru Univ. (India)

SLOW AND FAST LIGHT IN PLASMONICS AND METAMATERIALS

- 7226 OL **Tailoring and cancelling dispersion of slow or stopped and subwavelength surface-plasmonodielectric-polaritonic light (Invited Paper)** [7226-21]
A. Karalis, J. D. Joannopoulos, M. Soljačić, Massachusetts Institute of Technology (United States)
- 7226 OM **The cyclic power flow mechanism of slow fast and stopped light in plasmonics (Invited Paper)** [7226-22]
M. Orenstein, G. Rosenblatt, E. Figenbaum, Technion-Israel Institute of Technology (Israel)
- 7226 ON **Ultralow and stored light in metamaterials: new developments and verifications (Invited Paper)** [7226-23]
K. L. Tsakmakidis, O. Hess, Univ. of Surrey (United Kingdom)
- 7226 OO **Rabi splitting induced by photon tunneling modes in effective zero-index metamaterials (Invited Paper)** [7226-24]
H. Jiang, Tongji Univ. (China); L. Zhang, Tongji Univ. (China) and Henan Polytechnic Univ. (China); Y. Yang, Y. Zhang, H. Chen, Tongji Univ. (China); S. Zhu, Hong Kong Baptist Univ. (China)

SLOW AND FAST LIGHT IN MICRORESONATORS

- 7226 OP **Coupled semiconductor laser arrays and their applications (Invited Paper)** [7226-25]
J. Scheuer, Y. Yifat, Tel Aviv Univ. (Israel)

- 7226 0Q **Light trapping with a few cavities (Invited Paper)** [7226-26]
C. R. Otey, Stanford Univ. (United States); M. L. Povinelli, Univ. of Southern California (United States); S. Fan, Stanford Univ. (United States)
- 7226 0S **Dispersion properties of high-Q passive and active single or coupled resonators (Invited Paper)** [7226-28]
Y. Dumeige, S. Trébaol, ENSSAT-FOTON, CNRS, Univ. de Rennes 1 (France); H. Tavernier, FEMTO-ST, CNRS, Univ. de Franche-Comté (France); P. Féron, ENSSAT-FOTON, CNRS, Univ. de Rennes 1 (France)

SLOW AND FAST LIGHT IN PBG STRUCTURES, WAVEGUIDES AND CAVITIES I

- 7226 0T **Slow-light vortices in periodic waveguides (Invited Paper)** [7226-31]
A. A. Sukhorukov, S. Ha, A. S. Desyatnikov, Australian National Univ. (Australia); A. V. Lavrinenko, Technical Univ. of Denmark (Denmark); Y. S. Kivshar, Australian National Univ. (Australia)
- 7226 0U **Speed of light control via resonant nonlinearity and disorder in a photonic crystal (Invited Paper)** [7226-30]
I. V. Mel'nikov, A. N. Knigavko, High Q Labs. (Canada)
- 7226 0V **Coupling and propagation losses in slow light ($n_g > 100$) photonic crystal waveguides (Invited Paper)** [7226-29]
T. F. Krauss, Univ. of St. Andrews (United Kingdom)

SLOW AND FAST LIGHT IN PBG STRUCTURES, WAVEGUIDES AND CAVITIES II

- 7226 0W **Slow and fast light effects in semiconductor waveguides for applications in microwave photonics (Invited Paper)** [7226-32]
W. Xue, Y. Chen, Technical Univ. of Denmark (Denmark); F. Öhman, Syntune AB (Sweden); S. Sales, J. Capmany, Univ. Politecnica de Valencia (Spain); K. Yvind, J. Mørk, Technical Univ. of Denmark (Denmark)
- 7226 0X **Slow and fast light propagation inside an optical cavity containing coherent atoms (Invited Paper)** [7226-33]
H. Wu, M. Xiao, Univ. of Arkansas (United States)

Introduction

Since the first demonstration of ultraslow and superluminal group velocities of light, the field of slow and fast light has expanded significantly, with demonstrations of slow and fast light in a wide range of systems. In parallel, a wide range of applications of both slow and fast light have begun to emerge. The goal of this conference was to present the latest developments around the world in the studies and applications of slow and fast light. The presentations were categorized in several groups: 1) Slow Light in Polaritons, Gratings, and Related Systems; 2) Slow and Fast Light in Optical Fiber; 3) Slow Light in Atomic Vapor; 4) Slow and Fast Light in Plasmonics and Metamaterials; 5) Slow and Fast Light in Microresonators; 6) Slow and Fast Light in PBG Structures, Waveguides and Cavities; 7) Interferometric Application of Slow and Fast Light. This volume contains some representative papers from these groups. As always, due to time constraints and other reasons, authors of some very interesting talks presented at the conference were unable to submit their manuscripts in time to be included in this volume. A reader interested in finding out more about such a talk is encouraged to contact the authors directly.

The first four papers are from group 1. The first paper in this group (7226-3) deals with a dispersion-free slow light pulse and its functionalities. The second paper (7226-4) deals with SBS-based slow light in optical fibers, and addresses issues such as optimum design considerations for undistorted slow-light signal propagation in small and large signal regimes. The next paper (7226-6) describes enhanced second harmonic generation in coupled semiconductor whispering gallery mode microresonators. The last paper in this group (7226-7) addresses theoretical issues surrounding non-linear interactions in electromagnetically induced transparency and related pump-probe optical phenomena.

The next four papers are taken from group 2. We start with a paper (7226-9) that describes important experimental developments in the exploration of few photon switching with slow light in hollow fiber. The next paper (7226-10) describes the use of a Faraday rotator mirror for delay stabilization of SBS slow light in fibers. The third paper in this group (7226-12) addresses new directions in the exploration of producing slow and fast light in optical fibers, including a wide range of interesting experimental results. The final paper (7226-15) in this group deals with a new idea of slow and fast light in optical fibers using acousto-optic coupling between two co-propagating modes.

This is followed by three papers representing group 3. Here, the first paper (7226-17) describes some exciting experimental developments in the study of practical constraints imposed on the study of slow light and electromagnetically induced transparency in an atomic vapor, with implications for further development of vapor-based atomic clocks, among others. The next paper (7226-19) describes a

realistic model for electromagnetically-induced transparency and slow light in a hot atomic vapor, taking into account various sources of imperfections. The last paper in this group (7226-20) presents an important study of the impact of non-adiabatic fields and dissipation on the emerging field of quantum information storage and retrieval.

The next four papers are from group 4, dealing with slow and fast light in plasmonics and metamaterials. The first paper in this group (7226-21) addresses some exciting ideas for tailoring dispersion of slow or stopped and subwavelength surface-plasmonodielectric-polaritonic light. The second paper (7226-22) addresses the cyclic power flow mechanism of slow, fast and stopped light in plasmonics. The third paper (7226-23) describes new results regarding slow and stored light in metamaterials, opening up exciting prospects for applications. The final paper in this group (7226-24) presents a novel study of Rabi splitting induced by photon tunneling modes in effective zero-index metamaterials.

Representing group 5 are three important papers dealing with slow and fast light in microresonators. The first paper here (7226-25) describes recent developments in the investigation of active delay lines based on coupled ring optical waveguides (CROWs). The next paper (7226-26) describes light trapping and related dynamic effects with one or two microcavities, with important practical applications. The final paper in this group (7226-28) describes in great detail the dispersion properties of high-Q passive and active single or coupled microresonators.

Finally, five papers are presented from group 6, dealing with various aspects of slow and fast light in PBG structures, waveguides and cavities. The first paper (7226-29) deals with coupling and propagation losses in slow light photonic crystal waveguides. The second paper (7226-30) investigates mechanisms for controlling the group velocity of light via resonant nonlinearity and disorder in a photonic crystal. The third paper (7226-31) presents a detailed study of slow-light vortices and resonances in periodic waveguides. The next paper (7226-32) presents an extensive study of slow and fast light effects in semiconductor waveguides for applications in microwave photonics. The volume concludes with the fifth paper (7226-33) in this group, detailing experimental and theoretical studies pertaining to the optical spectra of coherent atoms inside an optical cavity.

This conference presents a broad overview of the state of the field of slow and fast light. We hope the readers will find this volume highly informative.
