Volume 7318

Proceedings of SPIE, 0277-786X, v. 7318

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers included in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. The papers published in these proceedings reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from this book:

Copying of material in this book for internal or personal use, or for the internal or personal use of specific clients, beyond the fair use provisions granted by the U.S. Copyright Law is authorized by SPIE subject to payment of copying fees. The Transactional Reporting Service base fee for this volume is \$18.00 per article (or portion thereof), which should be paid directly to the Copyright Clearance Center (CCC), 222 Rosewood Drive, Danvers, MA 01923. Payment may also be made electronically through CCC Online at copyright.com. Other copying for republication, resale, advertising or promotion, or any form of systematic or multiple reproduction of any material in this book is prohibited except with permission in writing from the publisher. The CCC fee code is 0277-786X/09/\$18.00.

Printed in the United States of America.

Publication of record for individual papers is online in the SPIE Digital Library.

SPIDigitalLibrary.org

Paper Numbering: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print and on CD-ROM. Papers are published as they are submitted and meet publication criteria. A unique, consistent, permanent citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages. Numbers in the index correspond to the last two digits of the six-digit CID number.

Contents

ix	Conference Committee
xi	Introduction

SESSION 1 MICRO-NANOPHOTONICS

7318 04	EO/IR sensors development using zinc oxide and carbon nanostructures [7318-03] A. K. Sood, R. A. Richwine, Y. R. Puri, Magnolia Optical Technologies, Inc. (United States); D. L. Polla, N. K. Dhar, Defense Advanced Research Projects Agency/MTO (United States); Z. L. Wang, Georgia Institute of Technology (United States); J. M. Xu, Brown Univ. (United States); P. S. Wijewarnasuriya, Army Research Lab. (United States); N. Goldsman, Univ. of Maryland, College Park (United States); M. B. Soprano, B. Lineberry, U.S. Army (United States)
7318 05	Heterogeneous 3D integration of multi-spectral photonic sensor with highly oriented micro/nano-pillars of semiconductors (Invited Paper) [7318-04] Logeeswaran, V. J., J. Goodwin, A. M. Katzenmeyer, M. S. Islam, Univ. of California, Davis (United States)
7318 06	Nanotube MEMS: modeling extreme nanoscale devices (Invited Paper) [7318-05] S. V. Rotkin, Lehigh Univ. (United States)

SESSION 2 NANOFABRICATION TECHNIQUES

7318 09	Using dip pen techniques for synthesis of nanostructures [7318-08] N. Singh, R. Gargate, D. Banerjee, A. Patil, Texas A&M Univ. (United States)
7318 0A	Site-specific dual ink dip pen nanolithography [7318-09] O. A. Nafday, J. R. Haaheim, F. Villagran, T. Levesque, NanoInk, Inc. (United States)
7318 0B	High-throughput processes and structural characterization of single-nanotube based devices for 3D electronics [7318-10] A. B. Kaul, K. G. Megerian, R. L. Baron, Jet Propulsion Lab. (United States); A. T. Jennings, D. Jang, J. R. Greer, California Institute of Technology (United States)
7318 0C	Characterization of InP nanowires grown on non-single-crystal platforms [7318-11] A. Lohn, T. Onishi, N. P. Kobayashi, Univ. of California, Santa Cruz (United States) and NASA Ames Research Ctr. (United States)
7318 0D	Scanning surface-enhanced Raman spectroscopy (SERS) of chemical agent simulants on templated Au-Ag nanowire substrates [7318-12] J. A. Hoffmann, J. A. Miragliotta, The Johns Hopkins Univ. Applied Physics Lab. (United States); J. Wang, P. Tyagi, T. Maddanimath, D. H. Gracias, The Johns Hopkins Univ. (United States); S. J. Papadakis, The Johns Hopkins Univ. Applied Physics Lab. (United States)

SESSION 3 BIOMEMS AND MICROFLUIDICS

- 7318 0E **Microfluidic point-of-care diagnostics for resource-poor environments (Invited Paper)** [7318-13]
T. Laksanasopin, C. D. Chin, H. Moore, J. Wang, Y. K. Cheung, S. K. Sia, Columbia Univ. (United States)
- 7318 0H **Size dependent droplet actuation in digital microfluidic systems** [7318-16]
B. Bhattacharjee, H. Najjaran, Univ. of British Columbia (Canada)
- 7318 0J **Cyber integrated MEMS microhand for biological applications** [7318-18]
A. Weissman, A. Frazier, M. Pepen, Y.-W. Lu, S. J. Yang, Rochester Institute of Technology (United States)

SESSION 4 MICRO-AUTONOMOUS SYSTEMS AND TECHNOLOGY (MAST)

- 7318 0K **The Army Research Laboratory's program on micro-autonomous systems and technology (Invited Paper)** [7318-19]
J. N. Mait, U.S. Army Research Lab. (United States)
- 7318 0L **Development of micromechanics for micro-autonomous systems (ARL-MAST CTA Program) (Invited Paper)** [7318-20]
J. S. Humbert, I. Chopra, Univ. of Maryland, College Park (United States); R. S. Fearing, R. J. Full, Univ. of California, Berkeley (United States); R. J. Wood, Harvard Univ. (United States); M. H. Dickinson, California Institute of Technology (United States)
- 7318 0M **An overview of research in advanced microelectronics for micro-autonomous platforms (Invited Paper)** [7318-21]
K. Sarabandi, L. Pierce, Univ. of Michigan, Ann Arbor (United States)
- 7318 0N **A simulation environment for modeling and development of algorithms for ensembles of mobile microsystems (Invited Paper)** [7318-22]
J. Fink, Univ. of Pennsylvania (United States); T. Collins, Georgia Institute of Technology (United States); V. Kumar, Univ. of Pennsylvania (United States); Y. Mostofi, The Univ. of New Mexico (United States); J. Baras, Univ. of Maryland, College Park (United States); B. Sadler, Army Research Lab. (United States)
- 7318 0O **Physiology of microsystems (Invited Paper)** [7318-23]
D. W. Beekman, U.S. Army Research Lab. (United States); M. E. Falco, BAE Systems (United States)
- 7318 0P **Power sources for micro-autonomous vehicles: challenges and prospects** [7318-24]
S. R. Narayan, A. Kisor, T. I. Valdez, H. Manohara, Jet Propulsion Lab. (United States)
- 7318 0Q **Robust landing using time-to-collision measurement with actuator saturation** [7318-25]
Y. Kuwata, L. Matthies, Jet Propulsion Lab. (United States)
- 7318 0R **Design and fabrication of microflap actuators for steering of micro air vehicles** [7318-26]
G. C. Zimbru, W. H. Lee, D. O. Popa, The Univ. of Texas at Arlington (United States)

SESSION 5 COMPLEX MEMS AND NANOSYSTEMS

- 7318 OT **Deformable MEMS mirrors in secure optical communication system** [7318-28]
L. Ziph-Schatzberg, Boston Univ. Photonics Ctr. (United States); T. Bifano, Boston Univ. Photonics Ctr. (United States) and Boston Micromachines Corp. (United States); S. Cornelissen, J. Stewart, Boston Micromachines Corp. (United States); Z. Bleier, PLX, Inc. (United States)
- 7318 OU **Hewlett Packard's inkjet MEMS technology: past, present, and future (Invited Paper)** [7318-29]
J. Stasiak, S. Richards, S. Angelos, Hewlett-Packard Co. (United States)
- 7318 OV **An iterative method for estimating the pull-in parameters of electrostatic actuators** [7318-30]
S. R. Nelatury, O. Onipede, R. Gray, The Pennsylvania State Univ. (United States)
- 7318 OW **A generalized electrostatic micro-mirror (GEM) model for a two-axis convex piecewise linear shaped MEMS mirror** [7318-31]
C. L. Edwards, The Johns Hopkins Univ. Applied Physics Lab. (United States); M. L. Edwards, Consultant (United States)
- 7318 OX **Nanotechnology enabled sensors and wireless sensing networks (Invited Paper)** [7318-32]
R. Tsui, R. Zhang, S. Mastroianni, Motorola, Inc. (United States); A. Díaz Aguilar, E. Forzani, N. Tao, Arizona State Univ. (United States)

SESSION 6 NANOELECTRONICS: FABRICATION, ASSEMBLY, AND CHARACTERIZATION

- 7318 OZ **Electro-optical characterization of in-plane grown carbon nanotubes** [7318-34]
N. Ai, Y.-T. Tsai, Q. Song, Stevens Institute of Technology (United States); E. L. Cochran, D. S. Choi, Univ. of Idaho (United States); E.-H. Yang, S. Strauf, Stevens Institute of Technology (United States)
- 7318 10 **Nanopatterning of micro sensor arrays for pH monitoring** [7318-35]
O. Korostynska, K. Arshak, A. Arshak, E. Gill, Univ. of Limerick (Ireland)
- 7318 11 **Nanostructured surfaces for anti-biofouling/anti-microbial applications** [7318-36]
C.-H. Choi, Stevens Institute of Technology (United States); C.-J. Kim, Univ. of California, Los Angeles (United States)
- 7318 12 **Nanosurfaces for nanosensing** [7318-37]
E. Gillman, A. Raspopin, D. Costello, M. Moreno, A. Taylor, Senspex (United States)
- 7318 13 **Carbon-based nanodevices for sensors, actuators, and electronics (Invited Paper)** [7318-38]
E. H. Yang, S. Strauf, F. Fisher, Stevens Institute of Technology (United States); D. S. Choi, Univ. of Idaho (United States)

SESSION 7 NANOTECHNOLOGY FOR SPACE APPLICATIONS

- 7318 14 **Fully printed phased-array antenna for space communications** [7318-58]
M. Y. Chen, Omega Optics, Inc. (United States); X. Lu, Univ. of Massachusetts, Lowell (United States); H. Subbaraman, R. T. Chen, The Univ. of Texas at Austin (United States)
- 7318 15 **Fabrication of a nanoscale electric field sensor** [7318-41]
Y. Zheng, T. King, D. Stewart, S. Getty, NASA Goddard Space Flight Ctr. (United States)
- 7318 16 **Integration of a carbon nanotube field emission electron gun for a miniaturized time-of-flight mass spectrometer (Invited Paper)** [7318-42]
S. A. Getty, M. Li, L. Hess, N. Costen, T. T. King, P. A. Roman, W. B. Brinckerhoff, P. R. Mahaffy, NASA Goddard Space Flight Ctr. (United States)

SESSION 8 DIAMOND MEMS/NEMS

- 7318 17 **Large-area low-temperature ultrananocrystalline diamond (UNCD) films and integration with CMOS devices for monolithically integrated diamond MEMS/NEMS-CMOS systems (Invited Paper)** [7318-43]
A. V. Sumant, O. Auciello, Argonne National Lab. (United States); H.-C. Yuan, Z. Ma, Univ. of Wisconsin-Madison (United States); R. W. Carpick, Univ. of Pennsylvania (United States); D. C. Mancini, Argonne National Lab. (United States)
- 7318 18 **Temperature dependence of mechanical stiffness and dissipation in ultrananocrystalline diamond (Invited Paper)** [7318-44]
V. P. Adiga, Univ. of Pennsylvania (United States); A. V. Sumant, Argonne National Lab. (United States); S. Suresh, C. Gudeman, Innovative Micro Technology (United States); O. Auciello, Argonne National Lab. (United States); J. A. Carlisle, Advanced Diamond Technologies (United States); R. W. Carpick, Univ. of Pennsylvania (United States)
- 7318 19 **Diamond MEMS: wafer scale processing, devices, and technology insertion (Invited Paper)** [7318-45]
J. A. Carlisle, Advanced Diamond Technologies, Inc. (United States)
- 7318 1B **Fundamentals and application of materials integration for low-power piezoelectrically actuated ultra-nanocrystalline diamond MEMS/NEMS (Invited Paper)** [7318-47]
O. Auciello, S. Srinivasan, J. Hiller, A. V. Sumant, B. Kabius, Argonne National Lab. (United States)

POSTER SESSION

- 7318 1C **Digital implementations for integrated microfluidic sensing** [7318-48]
A. Ahmadi, J. Nichols, M. Hoorfar, H. Najjaran, J. F. Holzman, The Univ. of British Columbia (Canada)
- 7318 1E **Antibody-functionalized magnetic nanowires for cell purification** [7318-50]
N. Gao, X. Yang, Y.-T. Tsai, G. M. Chu, H. Wang, E.-H. Yang, Stevens Institute of Technology (United States)

- 7318 1F **Single-layer SiGe infrared wide-band microemitter arrays by MEMS technology** [7318-51]
V. K. Malyutenko, O. Y. Malyutenko, Lashkaryov Institute of Semiconductor Physics (Ukraine);
V. Leonov, C. Van Hoof, IMEC (Belgium)
- 7318 1G **A simple technique to increase the quality factor of micro-mechanical resonators** [7318-53]
R. G. Turnbull, Univ. of Oxford (United Kingdom); M. C. L. Ward, Univ. of Birmingham (United
Kingdom); S. Collins, Univ. of Oxford (United Kingdom); C. J. Anthony, Univ. of Birmingham
(United Kingdom)
- 7318 1H **Microfabrication of nanowires-based GMR biosensor** [7318-54]
R. Bellamkonda, T. John, B. Mathew, M. Decoster, H. Hegab, J. Palmer, D. Davis, Louisiana
Tech Univ. (United States)
- 7318 1I **Detailed droplet routing and complexity characterization on a digital microfluidic biochip**
[7318-55]
R. L'Orsa, B. Bhattacharjee, M. Hoorfar, J. F. Holzman, H. Najjaran, The Univ. of British
Columbia (Canada)
- 7318 1J **Nano sensor design for hydrogen detection** [7318-56]
P. Zhang, A. Vincent, S. Seal, H.-J. Cho, Univ. of Central Florida (United States)
- 7318 1K **Fabrication of vertically standing metal nanowire arrays on silicon substrates using
anodized aluminum oxide (AAO) and polycarbonate (PC) templates** [7318-57]
S. Jang, S. Manoochchri, E.-H. Yang, Stevens Institute of Technology (United States)

Introduction

The Micro- and Nanotechnology Sensors, Systems, and Applications conference started in 2009 as a combination of the previous Micro (MEMS) and Nanotechnologies for Defense and Security, and the Nanosensing: Materials, Devices, and Systems conference from SPIE's Optics East symposium. The focus for this conference continues to be to not only highlight cutting-edge developments in Micro and Nanotechnologies (MNT), but also to address key issues involved in transitioning these developments to system-level applications in defense, homeland security, and space. We were particularly proud to host a new thematic session devoted entirely to the Army Research Laboratory's exciting Micro-Autonomous Systems and Technology (MAST) program. MAST provided an excellent example of an advanced R&D program aimed at bringing together all of the critical elements required for ultimately fielding MNT-based systems, including the systems engineering to layout the overall architecture as well as the various component developments in mechanics, electronics, power management, sensors, algorithms, and simulations.

The inter-disciplinary aspects of MNT and its wide range of applications were highlighted through the various sessions on Micro-Nanophotonics, Nanofabrication Techniques, BioMEMS and Microfluidics, Complex MEMS and Nanosystems, Nanoelectronics, Nanotechnology for Space Applications, and our newest theme, introduced this year, of Diamond MEMS/NEMS. We were very fortunate to have the leading experts from all of the above areas presenting invited talks to educate and guide the attendees on the critical challenges being faced in each of these topical areas, along with the attendant novel solutions that have been developed thus far to overcome several of these challenges. These talks spanned the gamut of new research results being obtained in academic institutions to complex new products being sold or under development at Hewlett Packard and Motorola. New for this year was a talk describing the work done on developing cheap disposable technologies for point-of-care diagnostics for the resource-poor environments of third-world, or developing countries for the early detection and monitoring of deadly diseases.

Research priorities from a funding perspective for DARPA and AFOSR were presented via keynote talks by program managers (PMs) from these agencies. The PMs presented results from past funded programs as well as roadmaps for the way forward in their respective areas of responsibility. This proceedings volume also includes papers presented at the poster session, describing new results in the modeling, fabrication, and testing of Micro and Nano devices.

There have been many people who have combined their efforts in reaching out and soliciting contributions from the scientific community to make this conference a success. We would like to thank the technical program committee

and the session organizers for their time and effort. They have been instrumental in bringing this conference to fruition by providing us with their advice and support, as well as contributing to the conference with their own excellent research. Finally, we would like to express our sincerest thanks to SPIE staff for their extraordinary coordination and exemplary hard work in publishing this volume of SPIE proceedings and their flawless effort over the last year in the overall organization of this conference.

We hope that you will enjoy these proceedings, that you feel encouraged to consider this conference as essential to participate, and that we will have the great pleasure of attending your future presentations on your contribution to this revolutionary field of nanosensing.
