Volume 7319

Proceedings of SPIE, 0277-786X, v. 7319

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers included in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. The papers published in these proceedings reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from this book:

Copying of material in this book for internal or personal use, or for the internal or personal use of specific clients, beyond the fair use provisions granted by the U.S. Copyright Law is authorized by SPIE subject to payment of copying fees. The Transactional Reporting Service base fee for this volume is \$18.00 per article (or portion thereof), which should be paid directly to the Copyright Clearance Center (CCC), 222 Rosewood Drive, Danvers, MA 01923. Payment may also be made electronically through CCC Online at copyright.com. Other copying for republication, resale, advertising or promotion, or any form of systematic or multiple reproduction of any material in this book is prohibited except with permission in writing from the publisher. The CCC fee code is 0277-786X/09/\$18.00.

Printed in the United States of America.

Publication of record for individual papers is online in the SPIE Digital Library.

SPIDigitalLibrary.org

Paper Numbering: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print and on CD-ROM. Papers are published as they are submitted and meet publication criteria. A unique, consistent, permanent citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages. Numbers in the index correspond to the last two digits of the six-digit CID number.

v	Conference Committee
vii	Introduction

SESSION 1 IMAGING SPECTROSCOPY

- 7319 02 **Molecular imaging by confocal Raman mapping: enabling technologies for speed, multivariate analysis, and convenience** [7319-01]
F. Adar, E. Lee, A. Whitley, Horiba Scientific (United States)
- 7319 03 **Characterization of spatial and spectral resolution of a rotating prism chromotomographic hyperspectral imager** [7319-02]
R. L. Bostick, G. P. Perram, R. Tuttle, Air Force Institute of Technology (United States)
- 7319 05 **Rapid calibrated high-resolution hyperspectral imaging using tunable laser source** [7319-04]
L. K. Nguyen, E. Margalith, OPOTEK, Inc. (United States)
- 7319 06 **Applications of spectral imaging using a tunable laser source** [7319-05]
D. C. Oertel, J. T. Grothaus, The Procter & Gamble Co. (United States); C. Marcott, Light Light Solutions, LLC (United States)
- 7319 07 **Advanced pushbroom hyperspectral LWIR imagers** [7319-06]
H. Holma, T. Hyvärinen, J. Lehtomaa, H. Karjalainen, R. Jaskari, Specim Spectral Imaging Ltd. (Finland)
- 7319 08 **Performance and applications of a hypertemporal hyperspectral Fourier-transform infrared spectroradiometer** [7319-07]
B. H. King, T. Ellis, T. E. Old, Alliant Techsystems Inc. (United States)
- 7319 09 **Novel hyperspectral prediction method and apparatus** [7319-08]
G. J. Kemeny, N. A. Crothers, G. A. Groth, K. A. Speck, Middleton Research (United States); R. Marbach, VTT Optical Instruments (Finland)

SESSION 2 MINIATURE AND PORTABLE SPECTROMETERS

- 7319 0A **Adaptive spectroscopy for rapid chemical identification** [7319-10]
D. V. Dinakarababu, The Univ. of Arizona (United States); M. E. Gehm, The Univ. of Arizona (United States) and College of Optical Sciences, The Univ. of Arizona (United States)
- 7319 0C **Portable Raman instrument for rapid biological agent detection and identification** [7319-12]
M. L. Lesaicherre, GE Homeland Protection (United States); T. L. Paxon, F. J. Mondello, M. C. Burrell, A. Linsebigler, GE Global Research (United States)

- 7319 0D **Coded-aperture DUV spectrometer for stand-off Raman spectroscopy** [7319-13]
N. Hagen, D. J. Brady, Fitzpatrick Institute for Photonics, Duke Univ. (United States)
- 7319 0E **Advances in portable FTIR spectrometers for the field: the HazMatID Ranger** [7319-14]
D. Levy, Smiths Detection (United States)

SESSION 3 MEMS-BASED SPECTROMETERS

- 7319 0F **Recent advances in compact broadly tunable external-cavity quantum cascade lasers (ECQCL)** [7319-20]
T. Day, M. Weida, D. Arnone, M. Pushkarsky, Daylight Solutions, Inc. (United States)
- 7319 0G **Diffraction MEMS components, systems, and applications** [7319-15]
H. Gröger, T. Egloff, T. Pügner, M. Scholles, H. Schenk, H. Lakner, Fraunhofer-Institut für Photonische Mikrosysteme (Germany)
- 7319 0H **Large stroke MOEMS actuators for optical path length modulation in miniaturized FTIR spectrometers** [7319-16]
T. Sandner, C. Drabe, H. Schenk, Fraunhofer-Institut für Photonische Mikrosysteme (Germany); A. Kenda, Carinthian Tech Research AG (Austria)
- 7319 0I **Improved MOEMS-based ultra-rapid Fourier transform infrared spectrometer** [7319-17]
A. Tortschanoff, A. Kenda, M. Kraft, Carinthian Tech Research AG (Austria); T. Sandner, H. Schenk, Fraunhofer-Institut für Photonische Mikrosysteme (Germany); W. Scherf, Carinthian Tech Research AG (Austria)
- 7319 0J **High-resolution miniature FTIR spectrometer enabled by a large linear travel MEMS pop-up mirror** [7319-18]
E. R. Deutsch, D. Reyes, E. R. Schildkraut, J. Kim, Block MEMS LLC (United States)
- 7319 0K **MEMS-based Fabry-Perot microspectrometers for agriculture** [7319-19]
J. M. Dell, J. S. Milne, J. Antoszewski, A. J. Keating, L. P. Schuler, L. Faraone, The Univ. of Western Australia (Australia)

Ray O. Johnson, Lockheed Martin Corporation (United States)

Symposium Cochair

Michael T. Eismann, Air Force Research Laboratory (United States)

Conference Chairs

Mark A. Druy, Physical Sciences Inc. (United States)

Christopher D. Brown, Ahura Scientific, Inc. (United States)

Richard A. Crocombe, Thermo Fisher Scientific, Inc. (United States)

Program Committee

Michael B. Frish, Physical Sciences Inc. (United States)

Fred Haibach, Polychromix, Inc. (United States)

Martin Kraft, Carinthian Tech Research AG (Austria)

Curtis A. Marcott, Light Light Solutions, LLC (United States)

Jay Zakrzewski, Headwall Photonics Inc. (United States)

Session Chairs

- 1 Imaging Spectroscopy
Mark A. Druy, Physical Sciences Inc. (United States)
- 2 Miniature and Portable Spectrometers
Christopher D. Brown, Ahura Scientific, Inc. (United States)
- 3 MEMS-based Spectrometers
Richard A. Crocombe, Thermo Fisher Scientific Inc. (United States)

Introduction

The 1990s saw a massive investment aimed at developing new telecommunications capabilities. This led to advances in miniature optics, light sources, tunable filters, array detectors, fiber optic sensors and a range of other photonic devices, along with technologies for their mass production. These and related advances are increasingly being exploited in new spectroscopic technologies that are often more sensitive and selective, smaller, cheaper, and more robust than their laboratory predecessors. Concurrent improvements in analytical theory and data analysis methods have pushed the capabilities of these spectroscopic devices even further. The consequence: spectroscopy-based systems making critical judgments in environments and applications that were unreachable twenty years ago.

This conference premiered at Optics East 2007 in Boston, MA and is now part of the SPIE Defense, Security, and Sensing symposium. The emphasis of these proceedings is on advanced technologies for spectroscopic instrumentation, particularly the IR, near-IR and Raman molecular techniques. This one-day conference was divided into three sessions focusing on Imaging Spectroscopy, Miniature and Portable Spectrometers, and MEMS-based Spectrometers. In all, eighteen papers were presented and we are pleased to be able to bring you seventeen of them in these proceedings.

On behalf of our program committee members, we hope that we can count on your participation in a future Next-Generation Spectroscopic Technologies conference.
