Proceedings of SPIE, 0277-786X, v. 7357

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers included in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. The papers published in these proceedings reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from this book:

Publication of record for individual papers is online in the SPIE Digital Library.

SPIDigitalLibrary.org

Paper Numbering: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print and on CD-ROM. Papers are published as they are submitted and meet publication criteria. A unique, consistent, permanent citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages. Numbers in the index correspond to the last two digits of the six-digit CID number.

Contents

- vii *Conference Committee*
- ix *Introduction*
- xi *Photon physics: from wave mechanics to quantum electrodynamics (Plenary Paper)*
[7355-100]
O. Keller, Aalborg Univ. (Denmark)

SESSION 1 **ADVANCES IN PCF FABRICATION: DOPED AND NONLINEAR FIBERS**

- 7357 02 **Microstructured fibers with high lanthanum oxide glass core for nonlinear applications (Invited Paper)** [7357-01]
J. Kobelke, K. Schuster, D. Litzkendorf, A. Schwuchow, J. Kirchhof, H. Bartelt, V. Tombelaine, Institute of Photonic Technology, Jena (Germany); P. Leproux, V. Couderc, A. Labruyere, XLIM, CNRS, Univ. de Limoges (France)
- 7357 03 **Highly nonlinear chalcogenide core nanofiber and photonic crystal fiber showing zero dispersion at 1.55 μm** [7357-02]
C. Chaudhari, T. Suzuki, Y. Ohishi, Toyota Technological Institute (Japan)
- 7357 04 **Microstructured fibers with germanium doped core components** [7357-03]
J. Kobelke, K. Schuster, A. Schwuchow, Y. Wang, S. Brückner, M. Becker, M. Rothhardt, J. Kirchhof, W. Ecke, R. Willsch, H. Bartelt, Institute of Photonic Technology, Jena (Germany)
- 7357 05 **Dispersion-engineered and highly nonlinear microstructured polymer optical fibres** [7357-04]
M. H. Frosz, K. Nielsen, Technical Univ. of Denmark (Denmark); P. Hlubina, Technical Univ. of Ostrava (Czech Republic); A. Stefani, O. Bang, Technical Univ. of Denmark (Denmark)
- 7357 06 **Y-shaped microstructured fibers with Ge-doped core** [7357-05]
S. Torres-Peiró, A. Díez, J. L. Cruz, M. V. Andrés, Univ. de Valencia (Spain)

SESSION 2 **SUPER CONTINUUM GENERATION IN PCF**

- 7357 07 **Relativistic particle white light super continuum generation** [7357-06]
K. E. Mattsson, Crystal Fibre A/S (Denmark)
- 7357 08 **Ge-doped Y-shaped microstructured fiber for supercontinuum generation** [7357-07]
J. Cascante-Vindas, S. Torres-Peiró, A. Díez, M. V. Andrés, Univ. de València (Spain)
- 7357 09 **Ultraflat supercontinuum generation in soft-glass photonic crystal fibers** [7357-08]
J. J. Miret, Univ. de Alicante (Spain); E. Silvestre, P. Andrés, Univ. de València (Spain)

SESSION 3 MEASUREMENT AND CHARACTERISATION OF PCF

- 7357 0A **Broadband measurement of dispersion in a two-mode birefringent holey fiber by spectral interferometric techniques** [7357-09]
P. Hlubina, D. Ciprian, M. Kadulová, Technical Univ. of Ostrava (Czech Republic);
G. Statkiewicz-Barabach, W. Urbańczyk, Wrocław Univ. of Technology (Poland)
- 7357 0B **Characterization of modes excited in a nonlinear photonic crystal fibre using low coherence interferometry** [7357-10]
P. Nandi, W. J. Wadsworth, T. A. Birks, J. C. Knight, Univ. of Bath (United Kingdom)
- 7357 0C **Birefringence dispersion in elliptical-core fibers measured over a broad wavelength range by interferometric techniques** [7357-11]
M. Kadulová, P. Hlubina, D. Ciprian, Technical Univ. of Ostrava (Czech Republic);
G. Statkiewicz-Barabach, W. Urbańczyk, Wrocław Univ. of Technology (Poland); J. Wójcik, Maria Curie-Skłodowska Univ. (Poland)

SESSION 4 PCF-BASED LASER MID-INFRARED SOURCES

- 7357 0D **Dynamic behaviour of an Ytterbium-doped rodlike PCF laser** [7357-12]
F. Poli, D. Passaro, A. Cucinotta, S. Selleri, Univ. of Parma (Italy)
- 7357 0E **Hollow-core photonic crystal fibers for integrated mid infrared sources** [7357-13]
B. Beaudou, XLIM, CNRS, Univ. de Limoges (France) and Univ. of Bath (United Kingdom);
F. Couny, Univ. of Bath (United Kingdom); S. Février, G. Humbert, F. Gérôme, XLIM, CNRS,
Univ. de Limoges (France); F. Benabid, Univ. of Bath (United Kingdom)
- 7357 0F **Chalcogenide As_2S_3 suspended core fiber for mid-IR wavelength conversion based on degenerate four-wave mixing** [7357-14]
M. Szpulak, Wrocław Univ. of Technology (Poland); S. Février, XLIM, CNRS, Univ. de Limoges (France)
- 7357 0G **Singlemode leakage channel fiber for the middle infrared** [7357-15]
L. N. Butvina, O. V. Sereda, A. L. Butvina, E. M. Dianov, Fiber Optics Research Ctr. (Russian Federation); N. V. Lichkova, V. N. Zagorodnev, Institute of Microelectronics Technology and High Purity Materials (Russian Federation)

SESSION 5 GRATING SENSOR APPLICATIONS OF PCF

- 7357 0H **Bragg grating writing in photonic crystal fibres (Invited Paper)** [7357-16]
K. Cook, J. Canning, The Univ. of Sydney (Australia); A. A. P. Pohl, Federal Univ. of Technology Parana (Brazil); J. Holdsworth, The Univ. of Newcastle (Australia); M. Stevenson, The Univ. of Sydney (Australia); S. Bandyopadhyay, Central Glass & Ceramic Research Institute (India); N. Groothoff, The Univ. of Sydney (Australia)
- 7357 0I **Fiber Bragg gratings in microstructured optical fibers for stress monitoring** [7357-17]
T. Geernaert, Vrije Univ. Brussel (Belgium); G. Luyckx, E. Voet, Univ. Gent (Belgium); T. Nasilowski, K. Chah, Vrije Univ. Brussel (Belgium); M. Becker, H. Bartelt, IPHT Jena (Germany); W. Urbanczyk, Wrocław Univ. of Technology (Poland); J. Wójcik, Maria Curie-Skłodowska Univ. (Poland); W. De Waele, J. Degrieck, Univ. Gent (Belgium); F. Berghmans, H. Thienpont, Vrije Univ. Brussel (Belgium)

- 7357 OJ **Comparison between femtosecond laser and fusion-arc inscribed long period gratings in photonic crystal fibre** [7357-18]
T. Allsop, Aston Univ. (United Kingdom); K. Kalli, Cyprus Univ. of Technology (Cyprus); K. Zhou, G. Smith, Aston Univ. (United Kingdom); M. Komodromos, Frederick Institute of Technology (Cyprus); K. Sugden, M. Dubov, D. J. Webb, I. Bennion, Aston Univ. (United Kingdom)
- 7357 OK **Inscription of type IIA Bragg reflectors in a highly non-linear microstructured optical fiber using deep ultraviolet laser radiation** [7357-19]
S. Pissadakis, M. Livitziis, G. Tsibidis, Foundation for Research and Technology-Hellas (Greece); J. Kobelke, K. Schuster, IPHT Jena (Germany)
- 7357 OL **Long period fibre gratings photoinscribed in a microstructured polymer optical fibre by UV radiation** [7357-20]
D. Sáez-Rodríguez, J. L. Cruz Munoz, Univ. de València (Spain); I. Johnson, D. J. Webb, Aston Univ. (United Kingdom); M. C. J. Large, A. Argyros, The Univ. of Sydney (Australia)

SESSION 6 MODELLING AND NUMERICAL ANALYSIS OF PCF

- 7357 ON **Analysis of the birefringence of solid-core air-silica microstructured fibers** [7357-22]
L. Labonté, Lab. de Physique de la Matière Condensée, CNRS, Univ. de Nice Sophia Antipolis (France); E. Pone, M. Skorobogatiy, N. Godbout, S. Lacroix, Ecole Polytechnique de Montréal (Canada); D. Pagnoux, XLIM, CNRS, Univ. de Limoges (France)
- 7357 OO **Guiding and amplification properties of rod-type photonic crystal fibers with sectioned core doping** [7357-23]
S. Selleri, F. Poli, D. Passaro, A. Cucinotta, Univ. of Parma (Italy); J. Lægsgaard, Danmarks Tekniske Univ. (Denmark); J. Broeng, Crystal Fibre A/S (Denmark)
- 7357 OQ **Dispersion optimization of nonlinear glass photonic crystal fibers and impact of fabrication tolerances on their telecom nonlinear applications performance** [7357-26]
J. Kanka, Institute of Photonics and Electronics (Czech Republic)
- 7357 OR **Novel design of photonic crystal fibres with high birefringence, low confinement loss, and low chromatic dispersion** [7357-27]
H. Ademgil, S. Haxha, F. AbdelMalek, Univ. of Kent (United Kingdom)

SESSION 7 GUIDED WAVE SENSING APPLICATIONS OF PCF

- 7357 OS **Role of microstructure on guided acoustic wave Brillouin scattering in photonic crystal fibers (Invited Paper)** [7357-28]
J.-C. Beugnot, T. Sylvestre, E. Carry, H. Maillotte, Institute FEMTO-ST, CNRS, Univ. de Franche-Comté (France); G. Mélin, S. Lempereur, A. Fleureau, Draka Comteq France (France); V. Laude, Institute FEMTO-ST, CNRS, Univ. de Franche-Comté (France)
- 7357 OU **Suspended-core fibres as optical gas sensing cells: study and implementation** [7357-30]
I. Dicaire, J.-C. Beugnot, L. Thévenaz, Ecole Polytechnique Fédérale de Lausanne (Switzerland)

Author Index

Conference Committee

Symposium Chairs

Pavel Tomanek, Brno University of Technology (Czech Republic)
Alan G. Michette, King's College London (United Kingdom)
Bahaa Saleh, Boston University (United States)

Symposium Honorary Chair

Jan Perina, Sr., Palacky University (Czech Republic)

Conference Chair

Kyriacos Kalli, Cyprus University of Technology (Cyprus)

Cochairs

Dmitry V. Skryabin, University of Bath (United Kingdom)
Francis Berghmans, Vrije Universiteit Brussel (Belgium)

Program Committee

Hartmut Bartelt, IPHT Jena (Germany)
Benjamin J. Eggleton, The University of Sydney (Australia)
Sebastien Fevrier, Université de Limoges (France)
Jiri Kanka, Institute of Photonics and Electronics (Czech Republic)
Jonathan Knight, University of Bath (United Kingdom)
Hanne Ludvigsen, Helsinki University of Technology (Finland)
Azizur B. Rahman, The City University (United Kingdom)
Karsten Rottwitt, Danmarks Tekniske Universitet (Denmark)
Kay Schuster, IPHT Jena (Germany)
Waclaw Urbanczyk, Wroclaw University of Technology (Poland)
David J. Webb, Aston University (United Kingdom)
Alexei M. Zheltikov, Lomonosov Moscow State University (Russian Federation)

Session Chairs

- 1 Advances in PCF Fabrication: Doped and Nonlinear Fibers
Kay Schuster, IPHT Jena (Germany)
- 2 Super Continuum Generation in PCF
Sébastien Février, Université de Limoges (France)

- 3 Measurement and Characterisation of PCF
Waclaw Urbanczyk, Wroclaw University of Technology (Poland)
- 4 PCF-based Laser Mid-infrared Sources
Kyriacos Kalli, Cyprus University of Technology (Cyprus)
- 5 Grating Sensor Applications of PCF
Francis Berghmans, Vrije Universiteit Brussel (Belgium)
- 6 Modelling and Numerical Analysis of PCF
Jiri Kanka, Institute of Photonics and Electronics (Czech Republic)
- 7 Guided Wave Sensing Applications of PCF
David J. Webb, Aston University (United Kingdom)

Introduction

It has been nearly twenty years since the conception of photonic crystal fibers, as devised by Philip St J. Russell in unpublished work dating to 1991. That work was a development of the "photonic crystal" ideas of Yablonovich and John who published two milestone papers on photonic crystals in 1987. The photonic crystal fiber (PCF) has given the field of fiber optics a newfound resurgence, resulting in revolutionary research and practical breakthroughs that would have proven otherwise impossible with conventional optical fibers; these include octave-spanning light continua, air guidance of light with low loss over several kilometers, and endlessly single-mode fiber operating over several hundred nanometers. The unusual confinement characteristics of PCF has resulted in their use in applications such as fiber-optic communications and sensing, fiber lasers, nonlinear devices, high-power transmission, and highly sensitive gas sensors, among others.

The term photonic crystal fiber has been used extensively to cover a class of optical fibers that include the photonic band gap fiber (with light confinement through the band gap effect), hole-assisted or microstructure fiber (guiding light through a conventional high-index core modified by the presence of air holes), and Bragg fiber (photonic band gap fiber formed using multilayer, concentric rings).

This third conference in the series on photonic crystal fibers reports some of the latest developments of PCF. The strength of photonic crystal fiber relates to its versatility and flexibility in terms of fiber geometry and material used. The fabrication and design of PCF is reported for the exotic doping of glasses and polymers to produce fibers with significant nonlinear properties, along with the characterization of PCF utilizing spectral interferometry. Developments of fiber-based light sources are supported by advances in super continuum generation and mid-infrared sources through non-linear mixing in hollow-core fiber and index-guiding crystal fibers. Grating sensor applications of PCF investigates the inscription of Bragg and long period grating sensors using continuous wave and pulsed laser sources, highlighting the effects of the hole-structure on grating inscription. The stability of grating structures is examined as are sensing of external parameters such as temperature and strain. Great strides have been made in the modeling of PCF, and a special session is devoted to the development of modeling and numerical analysis. Guided wave sensing applications are investigated through the role of microstructure on guided acoustic wave Brillouin scattering and through gas sensing, favored by the long interaction lengths afforded by PCF.

The conference has several invited papers listed below, presented by key scientists in the field:

“Microstructured fibers with high lanthanum oxide glass core for nonlinear applications”

“Bragg grating writing in photonic crystal fibers”

“Role of microstructure on guided acoustic wave Brillouin scattering in photonic crystal fibers”

I hope the reader will find the conference proceedings as interesting as our recent meeting in Prague.

Kyriacos Kalli
