Paper Numbering: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print and on CD-ROM. Papers are published as they are submitted and meet publication criteria. A unique, consistent, permanent citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages. Numbers in the index correspond to the last two digits of the six-digit CID number.

Introduction

This is the third year of the annual conference on Optics and Photonics for Information Processing. This year the conference attracted 42 contributed and invited presentations in the area of switching, holography, imaging, optical signal and image processing. We planned a joint session between our conference and the conference on Advanced Signal Processing Algorithms, Architectures, and Implementations, conference 7444B. The number of attendance was higher in the sessions than in the past. We attracted papers from many different countries across the globe including the U.S., Ireland, Finland, Spain, Japan, Czech Republic, Germany, Mexico, Russia, Lebanon, India, Iran, Republic of Korea, Ukraine, Uruguay, Georgia, U.K. and Argentina.

Our objective has been to bring people from various disciplines and foster cross-fertilization of ideas and research in the interdisciplinary areas of information processing in general. We hope to extend the idea of a joint session in the future.
