Proceedings of SPIE, 0277-786X, v. 7475

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers included in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. The papers published in these proceedings reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from this book:

Copying of material in this book for internal or personal use, or for the internal or personal use of specific clients, beyond the fair use provisions granted by the U.S. Copyright Law is authorized by SPIE subject to payment of copying fees. The Transactional Reporting Service base fee for this volume is \$18.00 per article (or portion thereof), which should be paid directly to the Copyright Clearance Center (CCC), 222 Rosewood Drive, Danvers, MA 01923. Payment may also be made electronically through CCC Online at copyright.com. Other copying for republication, resale, advertising or promotion, or any form of systematic or multiple reproduction of any material in this book is prohibited except with permission in writing from the publisher. The CCC fee code is 0277-786X/09/\$18.00.

Printed in the United States of America.

Publication of record for individual papers is online in the SPIE Digital Library.

SPIDigitalLibrary.org

Paper Numbering: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print and on CD-ROM. Papers are published as they are submitted and meet publication criteria. A unique, consistent, permanent citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages. Numbers in the index correspond to the last two digits of the six-digit CID number.

Contents

ix	Conference Committee
xi	Introduction

SESSION 1 REMOTE SENSING OF CLOUDS

- 7475 03 **CLIM: A cloud imager to provide sounders with agile sighting** [7475-05]
T. L. Trémas, S. Guibert, B. Lafrance, Ctr. National d'Etudes Spatiales (France)
- 7475 04 **Three-dimensional effects and shortwave cloud radiative forcing associated with shallow cumuli over the central North America** [7475-06]
L. K. Berg, Pacific Northwest National Lab. (United States); D. Mills, Jr., Univ. of South Carolina (United States); E. I. Kassianov, C. N. Long, Pacific Northwest National Lab. (United States)
- 7475 06 **A preliminary classification of cirrus clouds over São Paulo city by systematic lidar observations and comparison with CALIPSO and AERONET data** [7475-08]
E. Landulfo, Instituto de Pesquisas Energéticas e Nucleares (Brazil); E. G. Larroza, Instituto de Pesquisas Energéticas e Nucleares (Brazil) and Univ. Versailles (France); F. J. S. Lopes, Instituto de Pesquisas Energéticas e Nucleares (Brazil); C. Hoareau, Univ. Versailles (France)
- 7475 07 **Evaluation of the height assignment of semi-transparent clouds using simulated Meteosat spectral radiances** [7475-09]
R. Borde, EUMETSAT (Germany); P. Dubuisson, Univ. des Sciences et Technologies de Lille (France)

SESSION 2 REMOTE SENSING OF THE MIDDLE AND UPPER ATMOSPHERE

- 7475 08 **Development of a geomagnetic storm correction to the international reference ionosphere model E-region electron densities using TIMED/SABER observations** [7475-10]
C. J. Mertens, NASA Langley Research Ctr. (United States); X. Xu, Science Systems and Applications, Inc. (United States); J. Fernandez, NASA Langley Research Ctr. (United States); D. Bilitza, George Mason Univ. (United States); J. M. Russell III, Hampton Univ. (United States); M. G. Mlynczak, NASA Langley Research Ctr. (United States)
- 7475 09 **Auroral radiance modeling with SAMM2** [7475-11]
H. Dothe, J. W. Duff, J. H. Gruninger, R. Panfili, R. Kennett, Spectral Sciences, Inc. (United States); J. H. Brown, Air Force Research Lab. (United States)
- 7475 0A **Temperature and aerosol soundings in the middle atmosphere at different mid- and high-latitude lidar stations during day and night** [7475-12]
M. Gerding, G. Baumgarten, J. Höffner, J. Fiedler, R. Eixmann, F.-J. Lübken, Leibniz-Institut für Atmosphärenphysik e.V. (Germany)

SESSION 3 RADIATIVE TRANSFER

- 7475 OD **Top of atmosphere thermal flux retrieval for the EarthCARE Mission: a preview** [7475-15]
C. Domenech, T. Wehr, K. Wallace, European Space Research and Technology Ctr. (Netherlands)
- 7475 OE **CERES (FM2) field campaigns of 2008** [7475-16]
Z. P. Szewczyk, Science Systems and Applications, Inc. (United States); K. J. Priestley, NASA Langley Research Ctr. (United States)
- 7475 OF **Infrared radiative transfer model for aerosol clouds: implications to remote sensing by ground-based and airborne sensors** [7475-17]
A. Ben-David, U.S. Army Edgewood Chemical Biological Ctr. (United States); C. E. Davidson, Science and Technology Corp. (United States)
- 7475 OH **Full spectrum broken cloud scene simulation** [7475-19]
S. Richtsmeier, R. Sundberg, Spectral Sciences, Inc. (United States)
- 7475 OI **The 3D radiative effects of clouds in aerosol retrieval: Can we remove them?** [7475-20]
E. Kassianov, M. Ovchinnikov, L. K. Berg, S. A. McFarlane, C. Flynn, Pacific Northwest National Lab. (United States); R. Ferrare, C. Hostetler, NASA Langley Research Ctr. (United States)
- 7475 OJ **Fourier decomposition of sharply peaked phase functions: Legendre expansions versus trapezoidal rule** [7475-21]
A. Sei, Northrop Grumman Aerospace Systems (United States)
- 7475 OK **Sensitivity of atmospheric circulation models to upper tropospheric relative humidity derived from satellite observed radiances** [7475-22]
J. R. Dim, H. Murakami, Japan Aerospace Exploration Agency (Japan); T. Y. Nakajima, Tokai Univ. (Japan); T. Takamura, Chiba Univ. (Japan); M. Hori, Japan Aerospace Exploration Agency (Japan)

SESSION 4 LIDAR, RADAR, AND PASSIVE ATMOSPHERIC MEASUREMENT TECHNIQUES

- 7475 OL **Three-dimensional observations of atmospheric humidity with a scanning differential absorption Lidar (Invited Paper)** [7475-23]
A. Behrendt, V. Wulfmeyer, A. Riede, G. Wagner, S. Pal, H. Bauer, M. Radlach, F. Späth, Univ. Hohenheim (Germany)
- 7475 OM **Determination of mixing layer heights by ceilometer and influences upon air quality at Mexico City airport** [7475-24]
K. Schäfer, E. Flores-Jardines, S. Emeis, Forschungszentrum Karlsruhe GmbH (Germany); M. Grutter, Univ. Nacional Autónoma de México (Mexico); R. Kurtenbach, P. Wiesen, Bergische Univ. Wuppertal (Germany); C. Münkel, Vaisala GmbH (Germany)

- 7475 ON **Evaluation of continuous ceilometer-based mixing layer heights and correlations with PM_{2.5} concentrations in Beijing** [7475-25]
K. Schäfer, Forschungszentrum Karlsruhe GmbH (Germany); Y. Wang, Institute of Atmospheric Physics (China); C. Münkel, Vaisala GmbH (Germany); S. Emeis, Forschungszentrum Karlsruhe GmbH (Germany); J. Xin, G. Tang, Institute of Atmospheric Physics (China); S. Norra, N. Schleicher, J. Vogt, Univ. Karlsruhe (Germany); P. Suppan, Forschungszentrum Karlsruhe GmbH (Germany)
- 7475 OO **Improved near-range performance of a low-cost one lens lidar scanning the boundary layer** [7475-26]
C. Münkel, Vaisala GmbH (Germany); S. Emeis, K. Schäfer, Forschungszentrum Karlsruhe GmbH (Germany); B. Brümmer, Univ. Hamburg (Germany)
- 7475 OP **Aerosol stratification characterization of an astronomical site by means of a backscatter lidar at the Roque de los Muchachos Observatory** [7475-27]
M. Sicard, S. Tomás, M. N. Md Reba, A. Comerón, O. Batet, C. Muñoz-Porcar, A. Rodríguez, F. Rocadenbosch, Univ. Politècnica de Catalunya (Spain); C. Muñoz-Tunon, J. J. Fuensalida, Instituto de Astrofísica de Canarias (Spain)
- 7475 OQ **Microphysical properties and distribution retrieval with a variable base point algorithm** [7475-28]
L. Osterloh, C. Böckmann, Univ. Potsdam (Germany)
- 7475 OR **On mathematical relationships between lidae integrated backscattered light and integrated depolarization ratios for linear and circular polarization for water droplets** [7475-29]
X. Cao, Royal Military College of Canada (Canada); G. Roy, N. Roy, Defence Research and Development Canada (Canada); R. Bernier, Les Instruments Optiques du St-Laurent Inc. (Canada)
- 7475 OT **URMS/AMSSP (Universal Radiation Measurement System/Airborne Multi-Spectral Sunphoto- and Polarimeter)** [7475-32]
T. Ruhtz, R. Preusker, A. Hollstein, J. v. Bismarck, M. Starace, J. Fischer, Free Univ. Berlin (Germany)

SESSION 5 ATMOSPHERIC PROFILING OF AEROSOLS, TRACE GASES, AND METEOROLOGICAL PARAMETERS

- 7475 OV **Assessment of the effectiveness of atmospheric correction methods using standard calibration targets, ground measurements, and aster images** [7475-34]
D. G. Hadjimitsis, K. Themistocleous, Cyprus Univ. of Technology (Cyprus)
- 7475 OW **Determining aerosol radiative properties using the integrating nephelometer** [7475-35]
L. Mihai, Univ. of Bucharest (Romania) and National Institute for Lasers, Plasma and Radiation Physics (Romania); S. Ștefan, I. Ungureanu, Univ. of Bucharest (Romania)
- 7475 OY **Enhanced monitoring of sulfur dioxide sources with hyperspectral UV sensors** [7475-38]
A. Krueger, K. Yang, N. Krotkov, Univ. of Maryland, Baltimore County (United States)

SESSION 6 REMOTE SENSING BY FTIR, DOAS, AND OTHER SPECTROMETRIC METHODS

- 7475 0Z **Field-portable imaging remote sensing system for automatic identification and imaging of hazardous gases** [7475-39]
R. Harig, P. Rusch, H. Peters, Hamburg Univ. of Technology (Germany); J. Gerhard, Sigma ElectroOptics (Germany); R. Braun, Hamburg Univ. of Technology (Germany); S. Sabbah, Sigma ElectroOptics (Germany); J. Beecken, Hamburg Univ. of Technology (Germany)
- 7475 10 **New method for estimating greenhouse gas emissions from livestock buildings using open-path FTIR spectroscopy** [7475-40]
S. Briz, Univ. Carlos III de Madrid (Spain); J. Barrancos, D. Nolasco, G. Melián, E. Padrón, N. Pérez, Instituto Tecnológico y de Energías Renovables S.A. (Spain)
- 7475 11 **Application of open-path spectroscopic measurement techniques (FTIR) for the up-scaling of greenhouse gas emissions from soils** [7475-41]
K. Schäfer, C. Jahn, Forschungszentrum Karlsruhe GmbH (Germany); M. Wiwiorra, Univ. of Hannover (Germany); A. Schleichardt, Univ. of Leipzig (Germany); S. Emeis, Forschungszentrum Karlsruhe GmbH (Germany); A. Raabe, Univ. of Leipzig (Germany); J. Böttcher, Univ. of Hannover (Germany); N.-D. Landmeyer, C. Bonecke, Forschungszentrum Karlsruhe GmbH (Germany); M. Deurer, C. von der Heide, Univ. of Hannover (Germany); D. Weymann, Univ. of Goettingen (Germany)

POSTER SESSION: REMOTE SENSING OF CLOUDS

- 7475 12 **Comparison of cloud height and depth from atmospheric modelling and ceilometer measurements** [7475-42]
D. Santos, M. J. Costa, A. M. Silva, R. Salgado, Univ. de Évora (Portugal); D. Bortoli, Univ. de Évora (Portugal) and Institute of Atmospheric Sciences and Climate, CNR (Italy)
- 7475 13 **Nonparametric segmentation of clouds from multispectral MSG-SEVIRI imagery** [7475-43]
A. González, J. C. Pérez, M. Armas, Univ. de La Laguna (Spain)
- 7475 14 **Cloud detection and classification from multispectral satellite data** [7475-44]
M. J. Costa, Univ. de Évora (Portugal); D. Bortoli, Univ. de Évora (Portugal) and Institute of Atmospheric Sciences and Climate, CNR (Italy)
- 7475 15 **Sea fog characteristics based on MODIS data and streamer model** [7475-45]
Z. Hao, D. Pan, F. Gong, J. Chen, State Oceanic Administration (China)
- 7475 16 **An object-oriented-based daytime over land fog detection approach using EOS/MODIS data** [7475-46]
X. Wen, L. Liu, W. Li, P. Dong, Wuhan Univ. (China)
- 7475 17 **Estimation of optical thickness of volcanic ash clouds using satellite data** [7475-47]
B. Pflug, Deutsches Zentrum für Luft- und Raumfahrt e.V. (Germany)

POSTER SESSION: RADIATIVE TRANSFER

- 7475 18 **Spectral surface albedo derived from GOME-2/Metop measurements** [7475-48]
B. Pflug, D. Loyola, Deutsches Zentrum für Luft- und Raumfahrt e.V. (Germany)

7475 19 **Defining the shape of particles based on the polarisation state of the scattered optical radiation** [7475-49]
V. P. Budak, S. V. Korkin, K. N. Korolev, Moscow Power Engineering Institute Technical Univ. (Russian Federation)

7475 1A **A Monte Carlo simulation of radiative transfer in the atmosphere applied to ToTaL-DOAS** [7475-50]
M. Premuda, S. Masieri, ISAC, CNR (Italy); D. Bortoli, ISAC, CNR (Italy) and Univ. de Évora (Portugal); F. Margelli, F. Ravegnani, A. Petritoli, I. Kostadinov, G. Giovanelli, E. Cupini, ISAC, CNR (Italy)

POSTER SESSION: ATMOSPHERIC PROFILING OF AEROSOLS, TRACE GASES, AND METEOROLOGICAL PARAMETERS

7475 1D **Global simulation of tropospheric water vapor measurements through the Normalized Differential Spectral Attenuation (NDSA) approach: setup, scintillation model, and performance evaluation** [7475-37]
L. Facheris, F. Cuccoli, Univ. of Florence (Italy); E. Martini, Univ. of Siena (Italy); G. Kirchengast, S. Schweitzer, Univ. of Graz (Austria)

7475 1E **Estimation algorithm for aerosol properties from CAI on GOSAT** [7475-53]
I. Sano, S. Mukai, Kinki Univ. (Japan); M. Mukai, JAXA/EORC (Japan); B. Holben, I. Slutsker, NASA Goddard Space Flight Ctr. (United States)

7475 1F **Evaluation of seasonal change of aerosol properties from satellite and simulations** [7475-54]
M. Mukai, Japan Aerospace Exploration Agency (Japan); I. Sano, Kinki Univ. (United States)

7475 1G **Synthetic monitoring of Asian dust from space, ground, and/or simulations** [7475-55]
S. Mukai, T. Yokomae, Kinki Univ. (Japan); M. Mukai, Japan Aerospace Exploration Agency (Japan); I. Sano, Kinki Univ. (Japan)

7475 1H **Precipitable water vapour content above the Roque de los Muchachos Observatory from GPS estimations** [7475-57]
B. García-Lorenzo, J. A. Castro-Almazán, Instituto de Astrofísica de Canarias (Spain) and Univ. de La Laguna (Spain); A. Eff-Darwich, Univ. de La Laguna (Spain); C. Muñoz-Tuñón, Instituto de Astrofísica de Canarias (Spain) and Univ. de La Laguna (Spain); N. Pinilla-Alonso, NASA Ames Research Ctr. (Spain); J. M. Rodríguez-Espinosa, Instituto de Astrofísica de Canarias (Spain) and Univ. de La Laguna (Spain); I. Romero, Soluciones Avanzadas Canarias S. L. (Spain)

7475 1I **Ozone and nitrogen dioxide total columns and vertical distributions at the Italian Antarctic station during 1996-2008** [7475-58]
D. Bortoli, Univ. de Évora (Portugal) and Institute of Atmospheric Sciences and Climate, CNR (Italy); F. Ravegnani, G. Giovanelli, I. Kostadinov, A. Petritoli, S. Masieri, M. Premuda, Institute of Atmospheric Sciences and Climate, CNR (Italy); H. T. Martins, Algarve Univ. (Portugal); A. M. Silva, Univ. de Évora (Portugal)

POSTER SESSION: REMOTE SENSING BY FTIR, DOAS, AND OTHER SPECTROMETRIC METHODS

- 7475 1K **Observations of tropospheric compounds at Evora station with multi-axis hyperspectral measurements** [7475-61]
D. Bortoli, Univ. de Évora (Portugal) and Institute of Atmospheric Sciences and Climate, CNR (Italy); S. Masieri, Institute of Atmospheric Sciences and Climate, CNR (Italy);
A. F. Domingues, Univ. de Évora (Portugal); M. J. Costa, A. M. Silva, Univ. de Évora (Portugal);
M. Anton, Univ. of Évora (Portugal) and Univ. de Extremadura (Spain); E. Palazzi, Institute of
Atmospheric Sciences and Climate, CNR (Italy)
- 7475 1L **Ozone, nitrogen dioxide, and BrO total columns over Évora-Portugal during 2007-2008**
[7475-62]
A. F. Domingues, Univ. de Évora (Portugal); D. Bortoli, Univ. de Évora (Portugal) and Institute
of Atmospheric Sciences and Climate, CNR (Italy); M. Antón, Univ. de Extremadura (Spain);
A. M. Silva, Univ. de Évora (Portugal)

POSTER SESSION: LIDAR, RADAR, AND PASSIVE ATMOSPHERIC MEASUREMENT TECHNIQUES

- 7475 1M **The radar simulator: deriving the radar signal using the cloud model output** [7475-63]
A. E. Kardas, Univ. of Warsaw (Poland); S. McFarlane, Pacific Northwest National Lab. (United
States); H. Morrison, National Ctr. for Atmospheric Research (United States); J. Comstock,
Pacific Northwest National Lab. (United States); W. W. Grabowski, National Ctr. for
Atmospheric Research (United States); S. P. Malinowski, Univ. of Warsaw (Poland)
- 7475 1N **Standardisation work on ground-based remote-sensing techniques in Germany** [7475-64]
C. Mönkel, Vaisala GmbH (Germany); D. A. Engelbart, German Federal Ministry of Transport,
Building, and Urban Affairs (Germany); L. Woppowa, Kommission Reinhaltung der Luft im VDI
und DIN (Germany)

Introduction

The fourteenth conference on Remote Sensing of Clouds and the Atmosphere was held in Berlin, Germany, as part of SPIE *Europe Remote Sensing 2009*. The conference included 55 papers divided into six oral sessions and poster sessions. The areas covered were cloud remote sensing; middle/upper-atmosphere remote sensing; radiative transfer; lidar, radar, and passive atmospheric measurement techniques; profiling of aerosols, trace gases, and meteorological parameters; and spectrometric methods, including FTIR and DOAS.

The papers presented included a broad range of methodologies from basic theoretical principles of atmospheric phenomena and remote-sensing techniques to end-user applications of remote-sensing products.

Sensing in space and on the ground, as well as critical enabling technologies and disciplines, were all addressed. Space-based remote sensing is well suited to producing global data products and investigating relatively large scale phenomena. Current satellite instruments have matured and are producing a number of useful data products. On the other hand, ground-based measurements are complementary to space-based sensors, providing means to investigate small-scale and local phenomena. By forming networks of ground-based instruments, coordinated data over extended regions (and perhaps eventually over regions of global extent) can be obtained. Effective coordinated measurements among sensors of a ground-based network and also between ground-based and space-based sensors depend on accurate cross-calibration methods and, often also, on the availability of powerful computational facilities.

Remote sensing is most often, but not always, mediated by electromagnetic radiation, in a large frequency range between the radio-wave and x-ray regions. Hence, the principles of radiative transfer are fundamental to remote-sensing applications, and deeper understanding of radiative transfer leads to insight into new improved means of sensing. Considerable progress is occurring in 3-D radiative transfer, with attention to more complex geometries and boundary conditions.

The future may hold a significant opportunity to expand small-scale measurements to remote or difficult-to-reach areas through reliance on a broader range of platforms, including; ships, aircraft, unmanned aerial vehicles, and micro/nano/pico-satellites, and networks or formations of such platforms.

These proceedings contain the reviewed and revised papers corresponding to the conference presentations. Papers based on poster presentations are divided into the same categories as those based on oral papers.

We would like to thank the authors for the very high quality of their papers and thank the SPIE staff for their invaluable work in the organization of the conference and the editing of these proceedings.
