Volume 7605

Proceedings of SPIE, 0277-786X, v. 7605

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers included in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. The papers published in these proceedings reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from this book:

Copying of material in this book for internal or personal use, or for the internal or personal use of specific clients, beyond the fair use provisions granted by the U.S. Copyright Law is authorized by SPIE subject to payment of copying fees. The Transactional Reporting Service base fee for this volume is \$18.00 per article (or portion thereof), which should be paid directly to the Copyright Clearance Center (CCC), 222 Rosewood Drive, Danvers, MA 01923. Payment may also be made electronically through CCC Online at copyright.com. Other copying for republication, resale, advertising or promotion, or any form of systematic or multiple reproduction of any material in this book is prohibited except with permission in writing from the publisher. The CCC fee code is 0277-786X/10/\$18.00.

Printed in the United States of America.

Publication of record for individual papers is online in the SPIE Digital Library.

SPIE
Digital Library

SPIDigitalLibrary.org

Paper Numbering: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print and on CD-ROM. Papers are published as they are submitted and meet publication criteria. A unique, consistent, permanent citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages. Numbers in the index correspond to the last two digits of the six-digit CID number.

Contents

vii	Conference Committee
ix	Introduction

SESSION 1 TRENDS IN OEICs

- 7605 02 **Lasing from defect states in mixed-order organic laser structures (Invited Paper)** [7605-01]
K. Baumann, ETH Zürich (Switzerland); G. Raino, N. Moll, T. Stöferle, IBM Zürich Research Lab. (Switzerland); J. Bolten, T. Wahlbrink, AMO GmbH (Germany); R. F. Mahrt, IBM Zürich Research Lab. (Switzerland)
- 7605 03 **New perspectives and applications of silicon nanophotonics (Invited Paper)** [7605-02]
P. Dardano, L. De Stefano, E. De Tommasi, M. A. Ferrara, V. Mocella, I. Rea, L. Sirleto, I. Rendina, Institute for Microelectronics and Microsystems, National Council of Research (Italy)

SESSION 2 HIGHLY INTEGRATED OEICs

- 7605 06 **System-in-package technologies for photonics (Invited Paper)** [7605-05]
T. Tekin, TU Berlin Microperipheric Technologies (Germany)
- 7605 07 **Development of optical polymer waveguide devices (Invited Paper)** [7605-06]
K. S. Chiang, City Univ. of Hong Kong (Hong Kong, China)
- 7605 08 **Simple and reliable evaluation method of multi-mode polymer optical waveguides (Invited Paper)** [7605-07]
O. Sugihara, F. S. Tan, T. Kaino, Tohoku Univ. (Japan); M. Kagami, M. Yonemura, A. Kawasaki, Toyota Central Research and Development Labs., Inc. (Japan)

SESSION 3 SILICON OEICs

- 7605 09 **Silicon photonics for on-chip interconnects and telecommunications (Invited Paper)** [7605-08]
L. Chen, Alcatel-Lucent Bell Labs. (United States) and Cornell Univ. (United States); K. Preston, M. Lipson, Cornell Univ. (United States); C. R. Doerr, Y. Chen, Alcatel-Lucent Bell Labs. (United States)
- 7605 0A **Gathering effect on dark current for CMOS fully integrated-, PIN-photodiodes** [7605-09]
J. Teva, I. Jonak-Auer, F. Schrank, J. Kraft, J. Siegert, E. Wachmann, austriamicrosystems AG (Austria)
- 7605 0B **Design and manufacture of quantum-confined punch-through SOI light sources** [7605-10]
A. W. Bogalecki, INSiAVA (Pty) Ltd. (South Africa); M. du Plessis, Univ. of Pretoria (South Africa)

SESSION 4 BIOLOGICAL AND FLUIDIC OEICs

- 7605 0C **A platform for multiplexed sensing of biomolecules using high-Q microring resonator arrays with differential readout and integrated microfluidics (Invited Paper)** [7605-11]
J. B. Wright, I. Brener, K. R. Westlake, D. W. Branch, M. J. Shaw, G. A. Vawter, Sandia National Labs. (United States)
- 7605 0D **Integrated bio-inspired fluidic imaging system (Invited Paper)** [7605-12]
F. S. Tsai, D. Johnson, S. H. Cho, W. Qiao, A. Arianpour, C. S. Francis, Univ. of California, San Diego (United States); N.-H. Kim, Cymer, Inc. (United States); Y.-H. Lo, Univ. of California, San Diego (United States)

SESSION 5 GREEN OEIC TECHNOLOGIES

- 7605 0E **Solar spectrum rectification using nano-antennas and tunneling diodes (Invited Paper)** [7605-13]
M. Dagenais, K. Choi, F. Yesilkoy, A. N. Chryssis, M. C. Peckerar, Univ. of Maryland, College Park (United States)
- 7605 0F **Design, development and manufacture of high-efficiency low-cost solar modules based on CIGS PVICs (Invited Paper)** [7605-14]
L. Eldada, HelioVolt Corp. (United States)

SESSION 6 NONLINEAR AND QUANTUM OEICs

- 7605 0H **Slow light enhanced nonlinear photonic functionalities (Invited Paper)** [7605-16]
M. Spurny, Univ. of St. Andrews (United Kingdom); B. Corcoran, C. Monat, The Univ. of Sydney (Australia); T. F. Krauss, Univ. of St. Andrews (United Kingdom)

SESSION 7 NOVEL ACTIVE OEICs

- 7605 0J **High performance quantum dot-quantum well infrared focal plane arrays (Invited Paper)** [7605-18]
S. Tsao, A. Myzaferi, M. Razeghi, Northwestern Univ. (United States)
- 7605 0K **ZnO thin films and nanostructures for emerging optoelectronic applications** [7605-31]
D. J. Rogers, F. H. Teherani, Nanovation SARL (France); V. E. Sandana, Nanovation SARL (France) and Northwestern Univ. (United States); M. Razeghi, Northwestern Univ. (United States)
- 7605 0L **Selective co-doped erbium Ti:LiNbO₃ waveguide amplifiers** [7605-19]
R. Salas-Montiel, M. E. Solmaz, W. C. Tan, X. Song, W. T. Snider, C. K. Madsen, Texas A&M Univ. (United States)
- 7605 0M **On-chip integrated lasers in Al₂O₃:Er on silicon (Invited Paper)** [7605-20]
M. Pollnau, J. D. B. Bradley, F. Ay, E. H. Bernhardt, R. M. de Ridder, K. Wörhoff, Univ. of Twente (Netherlands)

SESSION 8 OEIC TECHNOLOGIES FOR MODULATION AND ISOLATION

- 7605 0O **Dynamic photonic structure for integrated photonics (Invited Paper)** [7605-22]
Z. Yu, S. Fan, Stanford Univ. (United States)

SESSION 9 MICRORING, MICRODISK, AND MICROSPHERE OEICs

- 7605 0P **Analysis of polarization-coupled infinite impulse response optical filters (Invited Paper)** [7605-23]
C. K. Madsen, R. Patnaik, Texas A&M Univ. (United States)
- 7605 0Q **Large-scale-integrated silicon photonics using microdisk and microring resonators (Invited Paper)** [7605-24]
A. W. Poon, S. Feng, H. Cai, X. Luo, H. Chen, Hong Kong Univ. of Science and Technology (Hong Kong, China)
- 7605 0R **Integrated microsphere arrays: light focusing and propagation effects (Invited Paper)** [7605-25]
A. Darafsheh, M. D. Kerr, K. W. Allen, N. M. Fried, The Univ. of North Carolina at Charlotte (United States); A. N. Antoszyk, Uniformed Services Univ. of the Health Sciences (United States) and Charlotte Eye Ear Nose and Throat Associates (United States); H. S. Ying, The Johns Hopkins Univ. (United States); V. N. Astratov, The Univ. of North Carolina at Charlotte (United States)

POSTER SESSION

- 7605 0S **A novel fabrication process of polymeric photonic crystal** [7605-26]
S. H. Oh, C. S. Kim, Pusan National Univ. (Korea, Republic of); E.-H. Lee, Inha Univ. (Korea, Republic of); M. Y. Jeong, Pusan National Univ. (Korea, Republic of)
- 7605 0T **A white-light interferometry scheme to measure wide-wavelength dispersion of thermo-optic coefficients of optical switch materials** [7605-27]
S. M. Kim, S. H. Kim, S. H. Lee, Y. K. Kwon, K. H. Kim, E.-H. Lee, Inha Univ. (Korea, Republic of)
- 7605 0U **Development of integration technology for optical PCB and electrical PCB** [7605-28]
D. Y. Cha, S. J. Cho, J. H. Lee, S. P. Chang, Inha Univ. (Korea, Republic of)

Conference Committee

Symposium Chair

E. Fred Schubert, Rensselaer Polytechnic Institute (United States)

Symposium Cochairs

Liang-Chy Chien, Kent State University (United States)

James G. Grote, Air Force Research Laboratory (United States)

Program Track Chair

Yakov Sidorin, Quarles Brady LLP (United States)

Conference Chairs

Louay A. Eldada, HelioVolt Corporation (United States)

El-Hang Lee, Inha University (Korea, Republic of)

Program Committee

Yung-Jui Chen, University of Maryland, Baltimore County (United States)

Larry A. Coldren, University of California, Santa Barbara (United States)

Mario Dagenais, University of Maryland, College Park (United States)

P. Daniel Dapkus, University of Southern California (United States)

Yeshaiahu Fainman, University of California, San Diego (United States)

Chennupati Jagadish, The Australian National University (Australia)

Richard M. Osgood, Jr., Columbia University (United States)

Manijeh Razeghi, Northwestern University (United States)

Giancarlo Cesare Righini, Istituto di Fisica Applicata Nello Carrara (Italy)

Session Chairs

- 1 Trends in OEICs
El-Hang Lee, Inha University (Korea, Republic of)
- 2 Highly Integrated OEICs
Louay A. Eldada, HelioVolt Corporation (United States)
- 3 Silicon OEICs
Mario Dagenais, University of Maryland, College Park (United States)

- 4 Biological and Fluidic OEICs
El-Hang Lee, Inha University (Korea, Republic of)
- 5 Green OEIC Technologies
El-Hang Lee, Inha University (Korea, Republic of)
- 6 Nonlinear and Quantum OEICs
Louay A. Eldada, HelioVolt Corporation (United States)
- 7 Novel Active OEICs
Louay A. Eldada, HelioVolt Corporation (United States)
- 8 OEIC Technologies for Modulation and Isolation
Christi K. Madsen, Texas A&M University (United States)
- 9 Microring, Microdisk, and Microsphere OEICs
Richard M. Osgood, Jr., Columbia University (United States)

Introduction

This volume features contributions from scientists and engineers in the general area of optoelectronic integrated circuits (OEIC). Optical, electronic, photovoltaic, microwave, biological, and fluidic devices are integrated to address the issues of cost, space, performance, and reliability. Demands for greater bandwidths have driven the telecom and datacom research communities to realize complex OEICs such as transceivers, low chirp optical sources, switching systems, and multi-channel optical distribution systems. The integration of multi-wavelength laser arrays, monitoring photodiodes, and drivers is becoming a reality in the communications arena. Other emerging OEIC application areas include all-optical packet switching, neural systems, optical computing, optical storage, smart pixel arrays, projection displays, imaging, scanning, printing, medical diagnosis, and chemical/biological sensing.

In keeping with the latest global economic demands for the use of integration to achieve low-cost solutions in critical areas, we cover in this volume the field of photovoltaic integrated circuits (PVIC) that are used in solar modules addressing the need for green renewable energy that is cost competitive with fossil fuel-based energy. Additionally, we cover the complementary emerging field of solar spectrum rectification based on integrated arrays of rectifying antennas (rectennas) that convert portions of the solar spectrum not efficiently converted to electric power by current photovoltaic approaches.

The increased level of integration in recent years has resulted in an increased level of miniaturization. The scientific and technological issues and challenges concerning the micro/nano/quantum-scale integration of optoelectronic devices, circuits, components, modules, subsystems, and systems include the size effect, proximity effect, energy confinement effect, microcavity effect, single photon effect, optical interference effect, high field effect, nonlinear effect, noise effect, quantum optical effect, and chaotic noise effects. Optical alignment between miniature devices, minimizing interconnection and coupling losses, and maintaining the stability of optical interfaces, are some of the important issues that are receiving careful consideration.

Papers in these proceedings include discussions of the physics, theory, design, modeling, simulation, and scaling of a wide range of OEICs with regard to their optical, electrical, thermal, and mechanical properties; the integration of different optoelectronic structure types including dots, wells, planar, free space, one-dimensional, two-dimensional, and three-dimensional photonics crystals; the integration of different functions including lasers, amplifiers, detectors, sensors, solar cells, modulators, isolators, circulators, electrically actuated/all-optical switches, attenuators, couplers, multi/demultiplexers, filters, wavelength converters, polarization controllers, chromatic/polarization mode dispersion

compensators, intra-chip/chip-to-board/board-level optical interconnects, and control electronics; the fabrication, processing, and manufacturing techniques (UV/deep UV/X-ray/e-beam lithography, casting, molding, embossing, etching, passivation, etc.); and the packaging, assembly, reliability, and qualification of monolithic and hybrid OEICs in a variety of materials (semiconductors, silica, polymers, ferroelectrics, magnetics, metals, biomaterials, etc.). Some papers describe the refinement of existing schemes and processes, while others introduce novel concepts and new designs. Papers from academic and research institutions push the state of the art in miniaturization, level of integration, and performance figures of merit, and papers from the industry emphasize design criteria and manufacturing methods that result in practical OEICs that can be deployed commercially today or in the near future.

Although this volume cannot include all the recent important work in the vast field of OEICs, it does cover a significant cross-section of the advances happening globally in areas where OEICs are making an impact, and it provides a roadmap to the future of OEICs by presenting the cutting-edge work and the visions of leading experts who are actively inventing the future.
