Volume 7675

Proceedings of SPIE, 0277-786X, v. 7675

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers included in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. The papers published in these proceedings reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from this book:

Copying of material in this book for internal or personal use, or for the internal or personal use of specific clients, beyond the fair use provisions granted by the U.S. Copyright Law is authorized by SPIE subject to payment of copying fees. The Transactional Reporting Service base fee for this volume is \$18.00 per article (or portion thereof), which should be paid directly to the Copyright Clearance Center (CCC), 222 Rosewood Drive, Danvers, MA 01923. Payment may also be made electronically through CCC Online at copyright.com. Other copying for republication, resale, advertising or promotion, or any form of systematic or multiple reproduction of any material in this book is prohibited except with permission in writing from the publisher. The CCC fee code is 0277-786X/10/\$18.00.

Printed in the United States of America.

Publication of record for individual papers is online in the SPIE Digital Library.

SPIDigitalLibrary.org

Paper Numbering: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print and on CD-ROM. Papers are published as they are submitted and meet publication criteria. A unique, consistent, permanent citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages. Numbers in the index correspond to the last two digits of the six-digit CID number.

Contents

vii	Conference Committee
ix	Introduction

SESSION 1 SENSORS IN TRANSPORTATION/AEROSPACE APPLICATIONS I

- 7675 02 **Evanescent wave absorption measurements of corroded materials using optical fibers as remote probes** [7675-25]
J. Namkung, Naval Air Systems Command (United States); M. Hoke, Air Force Research Lab. (United States); A. Schwartz, Naval Air Systems Command (United States)
- 7675 04 **Non-contact opto-fluidics-based liquid level sensor for harsh environments** [7675-02]
N. A. Riza, S. A. Reza, CREOL, The College of Optics and Photonics, Univ. of Central Florida (United States)
- 7675 05 **Prototype fiber optic imaging system for aerospace applications** [7675-03]
L. R. Gauthier, Jr., D. V. Hahn, M. J. Harold, J. R. Meyer, The Johns Hopkins Univ. Applied Physics Lab. (United States)
- 7675 06 **Diagnostic/prognostic health monitoring system and evaluation of Army composite bridge** [7675-04]
F. Abdi, AlphaSTAR Corp. (United States); R. Miraj, A. Mosallam, Univ. of California, Irvine (United States); R. Dutton, AlphaSTAR Corp. (United States)
- 7675 07 **Near infrared spectroscopy for fibre based gas detection (Invited Paper)** [7675-05]
G. Stewart, W. Johnstone, G. Thursby, B. Culshaw, Univ. of Strathclyde (United Kingdom)

SESSION 2 MICRO, NANO, AND LASER PHOTONICS IN TRANSPORTATION I

- 7675 08 **Laser beam characterization using agile digital-analog photonics** [7675-06]
M. Sheikh, P. Marraccini, N. A. Riza, CREOL, The College of Optics and Photonics, Univ. of Central Florida (United States)
- 7675 09 **Innovative technologies in optical fiber hydrogen sensor detection systems for space applications (Invited Paper)** [7675-07]
A. A. Kazemi, ARK International (United States)
- 7675 0A **Hermetic fiber optic modules for avionics applications (Invited Paper)** [7675-08]
E. Chan, The Boeing Co. (United States); A. Kazemi, ARK International (United States); D. Koshinz, H. Soares, H. Hager, The Boeing Co. (United States)
- 7675 0B **Directed acoustic shearography** [7675-27]
R. M. Kurtz, RAN Science & Technology, LLC (United States)

SESSION 3 SENSORS IN TRANSPORTATION/AEROSPACE APPLICATIONS II

- 7675 0C **Virtual optical interfaces for the transportation industry** [7675-10]
V. Hejmadi, B. Kress, USI Photonics Inc. (United States)
- 7675 0F **A distributed optical fiber sensor for hydrogen detection based on Pd, and Mg alloys**
[7675-13]
C. Perrotton, Univ. de Strasbourg (France); M. Slaman, Delft Univ. of Technology
(Netherlands) and Vrije Univ. Amsterdam (Netherlands); N. Javahiry, Univ. de Strasbourg
(France); H. Schreuders, B. Dam, Delft Univ. of Technology (Netherlands); P. Meyrueis, Univ.
de Strasbourg (France)
- 7675 0G **Interrogation strategies for distributed and multipoint fiber optic sensors (Invited Paper)**
[7675-14]
L. U. Kempen, I. F. Saxena, Intelligent Optical Systems, Inc. (United States)

SESSION 4 MICRO, NANO, AND LASER PHOTONICS IN TRANSPORTATION II

- 7675 0H **Ultra-narrow bandpass filters based on volume Bragg grating technologies** [7675-15]
J. Lumeau, CREOL, The College of Optics and Photonics, Univ. of Central Florida (United
States); V. Smirnov, A. Glebov, OptiGrate Corp. (United States); L. B. Glebov, CREOL, The
College of Optics and Photonics, Univ. of Central Florida (United States)
- 7675 0I **A micro-monolithic optical pressure sensor for high-pressure hydraulic fluid in transportation**
[7675-16]
M. Guilhem, P. Meyrueis, Univ. de Strasbourg (France)
- 7675 0J **Bistatic range-gated active imaging in vehicles with LEDs or headlights illumination**
[7675-17]
F. Christnacher, J.-M. Poyet, M. Laurenzis, J.-P. Moeglin, French-German Research Institute
of Saint-Louis (France); F. Taillade, Lab. Central des Ponts et Chaussées (France)
- 7675 0K **Fiber optic oxygen sensor using fluorescence quenching for aviation industry** [7675-26]
A. Panahi, Accro USA LLC (United States)

SESSION 5 PHOTONICS IN DATA TRANSMISSION FOR TRANSPORTATION

- 7675 0M **Broadband fiber-optic 1x2 switch using an electrically controlled liquid lens** [7675-19]
N. A. Riza, P. J. Marraccini, CREOL, The College of Optics and Photonics, Univ. of Central
Florida (United States)
- 7675 0N **Optical laser cross-link in space-based systems used for satellite communications** [7675-09]
A. Panahi, Accro USA LLC (United States); A. A. Kazemi, ARK International (United States)
- 7675 0O **Diaphragm resonance-based fiber optic hydrophone** [7675-23]
I. F. Saxena, N. Guzman, K. J. Hui, S. Pflanze, Intelligent Optical Systems, Inc. (United States)
- 7675 0P **High security optical tags for automotive/avionics parts anticounterfeiting** [7675-20]
E. Boisdur, D. Gesbert, B. Kress, HORUS Technologies (France)

- 7675 0Q **Specific signal processing method for sound detected by an intrinsic optical fiber sensor** [7675-21]
M. Arezki, P. Meyrueis, N. Javahiraly, Univ. de Strasbourg (France)
- 7675 0R **New PV conversion phenomena on very high efficiency silicon devices for small footprint cells (automotive)** [7675-22]
Z. T. Kuznicki, P. Meyrueis, Univ. de Strasbourg (France)
- 7675 0S **Monolithic integrated optic fiber Bragg grating sensor interrogator** [7675-28]
E. A. Mendoza, Y. Esterkin, C. Kempen, S. Sun, Redondo Optics, Inc. (United States)

Conference Cochairs

Bernard C. Kress, USI Photonics Inc. (United States)

Eric Y. Chan, The Boeing Company (United States)

Program Committee

Frank Abdi, AlphaSTAR Corporation (United States)

Ayman F. Abouraddy, College of Optics and Photonics, University of
Central Florida (United States)

Thomas D. P. Allsop, Aston University (United Kingdom)

Pierre Ambs, Université de Haute Alsace (France)

Ayoub Chakari, Université Louis Pasteur (France)

Fu-Kuo Chang, Stanford University (United States)

Marc Comet, Institut Franco-Allemand de Recherches de Saint-Louis
(France)

Brian Culshaw, University of Strathclyde (United Kingdom)

Thomas Dietsch, BMW AG (Germany)

James E. Fesmire, NASA Kennedy Space Center (United States)

Leonid B. Glebov, College of Optics and Photonics, University of
Central Florida (United States)

Harold Hager, The Boeing Company (United States)

Beth C. Haskell, PerkinElmer Optoelectronics (United States)

Zuyuan He, The University of Tokyo (Japan)

Vic Hejmadi, Universal Semiconductor, Inc. (United States)

Richard T. Howard, NASA Marshall Space Flight Center (United States)

Jeffrey H. Hunt, The Boeing Company (United States)

Nicolas Javahiraly, Ecole Nationale Supérieure de Physique de
Strasbourg (France)

Lothar U. Kempen, Intelligent Optical Systems, Inc. (United States)

Renaud R. Kiefer, Ecole Nationale Supérieure de Physique de

Strasbourg (France)
Peter Kiesel, Palo Alto Research Center, Inc. (United States)
Dennis G. Koshinz, The Boeing Company (United States)
David A. Krohn, Light Wave Venture Consulting, LLC (United States)
Ken Mahdi, Rockwell Collins, Inc. (United States)
Patrick P. Meyrueis, Ecole Nationale Supérieure de Physique de
 Strasbourg (France)
Stephen J. Mihailov, Communications Research Center Canada
 (Canada)
Jean-Pierre Moeglin, Institut Franco-Allemand de Recherches de
 Saint-Louis (France)
Mohammad Mojahedi, University of Toronto (Canada)
Herbert O. Moser, National University of Singapore (Singapore)
Juock S. Namkung, Naval Air Warfare Center (United States)
Albert O. Okorogu, The Aerospace Corporation (United States)
Allen S. Panahi, Accro USA LLC (United States)
Saeed Rehman, STR Fiber Technologies (United Kingdom)
Nabeel A. Riza, College of Optics and Photonics, University of Central
 Florida (United States)
Alex Rosiewicz, EM4, Inc. (United States)
Stephen Sagan, BAE Systems (United States)
Indu Fiesler Saxena, Intelligent Optical Systems, Inc. (United States)
Min-Yi Shih, Physical Optics Corporation (United States)
Michel Sirieix, Sagem Defense Securite (France)
Massood Tabib-Azar, The University of Utah (United States)
Tuan Vo-Dinh, Duke University (United States)
Robert C. Youngquist, NASA Kennedy Space Center (United States)

Session Chairs

- 1 Sensors in Transportation/Aerospace Applications I
Alex A. Kazemi, ARK International (United States)
- 2 Micro, Nano, and Laser Photonics in Transportation I
Eric Y. Chan, The Boeing Company (United States)
- 3 Sensors in Transportation/Aerospace Applications II
Bernard C. Kress, USI Photonics Inc. (United States)
- 4 Micro, Nano, and Laser Photonics in Transportation II
Brian Culshaw, University of Strathclyde (United Kingdom)
- 5 Photonics in Data Transmission for Transportation
Indu F. Saxena, Intelligent Optical Systems, Inc. (United States)

Introduction

Today, a great proportion of the world's communications is carried by fiber optic cables. Over the past three decades, the field of fiber optic sensors has undergone a remarkable change. The fiber optic technology has revolutionized the telecommunications market and is rapidly becoming a major player in such areas as telephone, cable TV, and local-area network (LAN). It has spread into every situation in which information is being transmitted.

I have been greatly impressed over the years by the tremendous progress in photonics in the transportation industry. The technology has gone through a quantum leap. More information, intelligence, and data are transferred from one point to another, more quickly and precisely than ever thought possible, thanks to the miracle of optical fibers. Fiber optics shall become as common as wire, easy to construct to precise tolerances and accurate and perfect in operation.

In recent years, the fiber optic sensor greatly benefited from the low-cost telecommunications industries. Due to this synergy, an enormous amount of new technologies has been introduced in the form of smart sensor, biomedical sensors, pressure, temperature and liquid level, to name a few. At the same time, fiber optic sensor technology and photonics in the transportation industry have developed in parallel with fiber optic and other optoelectronics industries such as lasers, which dominate the compact disk, DVD, laser printer, and scanner industry with the most promising users for lasers and communications over fiber optic cables.

I find myself among pioneers and the thrill of technical achievement can be just as tangible to those of us involved with engineering, technology, and science as the thrill of lifetime accomplishment. This book contains a series of papers that contain state-of-the-art fiber optic sensor technologies for photonics in transportation industries, such as advanced technologies for cryogenic leak detection systems for space applications, a new generation of fiber optic sensor using holography for detection of motion and vibration in automobile bumper shock, and novel optical tags based on planar digital micro-optics that is used for anticounterfeiting.

On behalf of SPIE and myself, I would like to thank the individual authors for their valuable contributions, particularly professor Patrick Meyrueis of the Université de Strasbourg, professor Nabeel Riza of CREOL, the University of Central Florida, Dr. Bernard Kress of USI Photonics Inc., Dr. Allen Panahi of Accro USA LLC, and Dr. Eric Chan of the Boeing Co. for the outstanding papers they presented in this book.

Alex A. Kazemi
