Volume 7685

Proceedings of SPIE, 0277-786X, v. 7685

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers included in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. The papers published in these proceedings reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from this book:

Printed in the United States of America.

Publication of record for individual papers is online in the SPIE Digital Library.

SPIE
Digital Library

SPIDigitalLibrary.org

Paper Numbering: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print and on CD-ROM. Papers are published as they are submitted and meet publication criteria. A unique, consistent, permanent citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages. Numbers in the index correspond to the last two digits of the six-digit CID number.

Contents

vii	Conference Committee
ix	Introduction

SESSION 1 UNDERSTANDING THE ATMOSPHERE

- 7685 02 **Weak and strong off-axis beam scintillations and beam wander for propagation in turbulence** [7685-01]
M. Charnotskii, Zel Technologies, LLC (United States) and NOAA Earth System Research Lab. (United States)
- 7685 03 **Propagation of higher-order annular Laguerre-Gauss beams in atmospheric turbulence** [7685-02]
F. E. Strömqvist Vetelino, R. J. Morgan, Aerospace Missions Corp. (United States)
- 7685 04 **A re-analysis of short-exposure turbulent effects on passive imaging** [7685-03]
D. H. Tofsted, Army Research Lab. (United States)
- 7685 05 **Near-surface anisotropic turbulence** [7685-04]
C. Klipp, Army Research Lab. (United States)

SESSION 2 APPROACHES TO ATMOSPHERIC MITIGATION

- 7685 07 **Optical communications receiver array (Invited Paper)** [7685-06]
J. M. Saint Clair, E. Y. Chan, D. G. Koshinz, S. K. Wilcken, The Boeing Co. (United States); D. C. Soreide, Optimal Aerospace LLC (United States); A. Joshi, H. Durmus, Teledyne Scientific Co. (United States)
- 7685 08 **Naval Research Laboratory scintillation playback system for bench top lasercomm testing** [7685-29]
C. I. Moore, Naval Research Lab. (United States); M. F. Stell, Research Support Instruments, Inc. (United States); W. S. Rabinovich, H. R. Burris, M. R. Suite, L. W. Thomas, R. Mahon, Naval Research Lab. (United States)
- 7685 0A **Prediction of the ground-level refractive index structure parameter from the measurement of atmospheric conditions** [7685-09]
T. T. Leclerc, R. L. Phillips, L. C. Andrews, D. T. Wayne, P. Sauer, R. Crabbs, Florida Space Institute, Univ. of Central Florida (United States)
- 7685 0B **Experimental evaluation of a misalignment tolerant FSO receiver** [7685-10]
S. Pondelik, P. G. LoPresti, The Univ. of Tulsa (United States); H. Refai, Univ. of Oklahoma (United States)

SESSION 3 AIRBORNE AND SPACE STUDIES

- 7685 0C **Visualizing aero-optic interactions about a nose-mounted turret (Invited Paper)** [7685-11]
J. M. Cicchiello, Northrop Grumman Corp. (United States); S. Harris, Flatiron Research LLC (United States); C. A. Prudden, J. Neiswender, Air Force Research Lab. (United States); D. W. Bope, C. J. Harkrider, T. G. Moore, Northrop Grumman Corp. (United States); B. Stadler, Air Force Research Lab. (United States); L. Stotts, Defense Advanced Research Projects Agency (United States)
- 7685 0E **Field and laboratory validation of surface layer optical turbulence and off-axis irradiance** [7685-13]
S. T. Fiorino, J. D. Haiducek, C. A. Rice, A. D. Downs, M. J. Krizo, R. J. Bartell, S. J. Cusumano, Air Force Institute of Technology (United States)
- 7685 0G **Frequency characteristics of atmospheric turbulence in space-to-ground laser links** [7685-15]
M. Toyoshima, H. Takenaka, Y. Shoji, Y. Takayama, National Institute of Information and Communications Technology (Japan)

SESSION 4 MARITIME STUDIES

- 7685 0H **Free-space optical channel characterization in the maritime environment (Invited Paper)** [7685-16]
J. C. Juarez, J. E. Sluz, The Johns Hopkins Univ. Applied Physics Lab. (United States); C. Nelson, The Johns Hopkins Univ. (United States); M. B. Airola, M. J. Fitch, D. W. Young, D. Terry, The Johns Hopkins Univ. Applied Physics Lab. (United States); F. M. Davidson, The Johns Hopkins Univ. (United States); J. R. Rottier, R. M. Sova, The Johns Hopkins Univ. Applied Physics Lab. (United States)
- 7685 0I **The ONR enabling capability on high-bandwidth lasercomm** [7685-17]
L. M. Thomas, C. I. Moore, W. Rabinovich, Naval Research Lab. (United States)
- 7685 0J **Long range audio laser communication link in a maritime environment** [7685-18]
K. J. Grant, Defence Science and Technology Organisation (Australia); H. R. Burris, C. I. Moore, Naval Research Lab. (United States); W. Martinsen, Defence Science and Technology Organisation (Australia); J. Giesbrecht, Ebor Computing (Australia); B. A. Clare, K. A. Mudge, Defence Science and Technology Organisation (Australia); G. C. Gilbreath, W. S. Rabinovich, Naval Research Lab. (United States)
- 7685 0K **Effects of beam wander on free-space optical communications through turbulent atmosphere** [7685-19]
Z. Zhao, R. Liao, Michigan Technological Univ. (United States)

SESSION 5 PROPAGATION EFFECTS AND MONITORING

- 7685 0L **Near the ground laser communication system for monitoring the statistics of turbulence: fried parameter estimation from the PSF measurements** [7685-20]
A. V. Sergeev, M. C. Roggemann, C. Demars, Michigan Technological Univ. (United States)

- 7685 OM **Effects of thermal blooming on systems comprised of tiled subapertures** [7685-21]
C. L. Leakeas, R. J. Bartell, M. J. Krizo, S. T. Fiorino, S. J. Cusumano, Air Force Institute of Technology (United States); M. R. Whiteley, MZA Associates Inc. (United States)
- 7685 ON **Complete affordable system for simultaneous VIS/NIR and MWIR/LWIR spectral atmospheric transmittance measurements (ATMS)** [7685-22]
D. Cabib, A. Gil, O. Biran, CI Systems (Israel) Ltd. (Israel)
- 7685 OO **Three-dimensional near-surface turbulent anisotropic structure function measurements** [7685-23]
D. H. Tofsted, Army Research Lab. (United States)

SESSION 6 MODELING ACTIVITIES

- 7685 OQ **Coherence of beam arrays propagating in the turbulent atmosphere** [7685-25]
M. Charnotskii, Zel Technologies, LLC (United States) and NOAA Earth System Research Lab. (United States)
- 7685 OR **Model validation of turbulence effects on orbital angular momentum of single photons for optical communication** [7685-26]
F. E. Strömqvist Vetelino, R. J. Morgan, Aerospace Missions Corp. (United States)
- 7685 OS **The code MaexPro for calculation of aerosol extinction in the marine and coastal environment** [7685-28]
G. A. Kaloshin, V.E. Zuev Institute of Atmospheric Optics (Russian Federation)

POSTER SESSION

- 7685 OT **Analysis of the characteristics of atmospheric turbulence in marine surface of South China Sea based on the routine meteorology factors** [7685-27]
D. Chen, Naval Academy of Armament (China)

Author Index

Conference Committee

Symposium Chair

Michael T. Eismann, Air Force Research Laboratory (United States)

Symposium Cochair

William Jeffrey, HRL Laboratories, LLC (United States)

Conference Chairs

Linda M. Wasiczko Thomas, Naval Research Laboratory (United States)

Earl J. Spillar, Air Force Research Laboratory (United States)

Program Committee

Larry C. Andrews, University of Central Florida (United States)

Gary J. Baker, Lockheed Martin Advanced Technology Center (United States)

Harris R. Burris, Jr., Naval Research Laboratory (United States)

James M. Cicchiello, Northrop Grumman Corporation (United States)

G. Charmaine Gilbreath, Naval Research Laboratory (United States)

Gary G. Gimmestad, Georgia Tech Research Institute (United States)

Kenneth J. Grant, Defence Science and Technology Organisation (Australia)

Christopher I. Moore, Naval Research Laboratory (United States)

Jonathan M. Saint Clair, The Boeing Company (United States)

David H. Tofsted, Army Research Laboratory (United States)

Morio Toyoshima, National Institute of Information and Communications Technology (Japan)

Cynthia Y. Young, University of Central Florida (United States)

Session Chairs

- 1 Understanding the Atmosphere
Jonathan M. Saint Clair, The Boeing Company (United States)
- 2 Approaches to Atmospheric Mitigation
Harris R. Burris, Jr., Naval Research Laboratory (United States)
- 3 Airborne and Space Studies
Earl J. Spillar, Air Force Research Laboratory (United States)

- 4 Maritime Studies
Christopher I. Moore, Naval Research Laboratory (United States)
- 5 Propagation Effects and Monitoring
Linda M. Wasiczko Thomas, Naval Research Laboratory (United States)
- 6 Modeling Activities
Gary J. Baker, Lockheed Martin Advanced Technology Center (United States)

Introduction

The Atmospheric Propagation conference filled one and a half busy days with presentations. The mix of people was quite good, running the gamut from veterans of conferences past, to new-comers.

Participation was drawn from both the government and industry. As usual, the conference both educated directly with an excellent series of talks, and fostered good side-discussions.

Several topics within the broad aegis of atmospheric propagation were discussed. Both the characterization of the atmosphere and compensation for the atmosphere were covered in talks. The three areas of experiment, modeling, and simulation were covered as well.

Many in the group were interested in laser communications, both for challenging highly scintillated paths, as well as new developments in quantum communications and of higher angular momentum states.

Side discussions bemoaned the current state of funding for efforts in the area, but many were hopeful for the future, buoyed by the belief that the utility of these techniques will win out in the long run.
